Trench is in error when he says that this word is in none of the Dictionaries. It is in Webster, ed. 1848. The Archbishop says that the following citation from Donne should be inserted with it:—"Because in their translation, in the Vulgate edition of the Roman Catholic Church, they [the Roman Catholics] find in Exod. xxv. 25 that word *aureolam*. Facies coronam *aureolam*, 'Thou shalt make a lesser crown of gold;' out of this diminutive and mistaken word they have established a doctrine that, besides these *coronæ aureæ*, those crowns of gold which are communicated to all the saints from the crown of Christ, some saints have made to themselves, and produced out of their own extraordinary merits, certain *aureolas*, certain lesser crowns of their own . . . And these *aureolas* they ascribe only to three sorts of persons—to Virgins, to Martyrs, to Doctors." Donne: *Sermon*, 73.) (*Trench: On some Def. in our Eng. Dict.*, p. 42.)

āu'-ric, *a.* [From Lat. *aurum*=gold, and Eng. suff. -ic.]

A. Ordinary Language: Of gold; having more or less of gold in its composition, or in any way pertaining to gold.

B. Science generally:

Chem.: With gold as one of its constituent elements. In *auric compounds* the gold is trivalent, while in *aurous compounds* it is univalent. There are auric sulphides, chlorides, anoxides, bromides, and iodides. If alloys of gold be dissolved in nitromuriatic acid, and a ferrous salt be added, the pure metal will be precipitated. The chief tests for gold in solution are ferrous sulphate and what is called "purple of Cassius."

Auric chloride or *trichloride of gold* (AuCl₃) is formed when gold is dissolved in nitro-muriatic acid, forming a yellow solution. It crystallizes with hydrochloric acid, which it gives off on heating, forming a red crystalline mass of AuCl₃. Auric chloride is very deliquescent, soluble in water, alcohol, and ether; it forms double salts, as NaCl, AuCl₃, 2H₂O, a double chloride of sodium and gold.

Auric oxide (Au₂O₃) is obtained by adding magnesia to auric chloride, and digesting the precipitate with nitric acid. Auric oxide is a chestnut-brown powder, reduced to metallic gold by heat, or by exposure to light. Auric oxide is soluble in strong nitric acid, and easily dissolved by hydrochloric or hydrobromic acids. It is soluble in alkalies. By digesting it in ammonia it forms fulminating gold. Its salts, with alkalies, are called *aurates*.

Auric sulphide (Au₂S₃) is formed when hydrogen sulphide (H₂S) is passed into a cold dilute solution of auric chloride. It is yellow-brown, and is soluble in ammonium sulphide.

āu-rī-chāl'-çite, *s.* [From Lat. *aurichalcum*, better spelled *orichalcum*; Gr. *oreichalkos*=yellow copper ore, also the brass made from it; *oreios*=mountainous; *oros*=a mountain, and *chalkos*=(1) copper, (2) bronze, (3) brass.] A mineral placed by Dana under the fourth section of his Hydrous Carbonates. It occurs in acicular crystals, forming drusy incrustations; also columnar, plumose, granular, or laminated. Its luster is pearly; its color, pale-green, or sometimes azure. The hardness is 2. The composition: Oxide of copper, 16'03 to 32'5; oxide of zinc, 32'02 to 56'82; carbonic acid, 14'08 to 24'69; water, 9'93 to 10'80; lime, 0 to 8'62. 2. *Auricles of the heart*: Those two of the four cavities of the heart which are much smaller than the others, and each of which, moreover, has falling down upon its external face a flattened appendage, like the ear of a dog, from which the name of the whole structure is derived. The right auricle has a communication with the right ventricle, and the left auricle with the left ventricle. The two auricles are irregular, cuboidal, muscular bags, separated from each other by a thin fleshy partition. The main portion of each consists of what is called the *sinus venosus*, into which the veins pour their blood. (*Todd & Bowman: Physiol. Anat.*, vol. ii., p. 333, &c.)

and still existing in small numbers in Lithuania, being preserved by strict protective laws. In prehistoric times it must have existed in England, for its remains have been found in Newer Pliocene strata at Woolwich, at Ilford, and in the valley of the Thames. It is not to be confounded with the *Urus* of *Cæsar*. The genus is almost extinct.

Âu-rô-ra, âu-rô-ra, s. [In Ger., Sp., Port., Ital., & Lat. *Aurora*, *aurora*; Fr. *Aurore*, *aurore*. *Mahn* considers this as *aurea hora*=golden hour, or Gr. *aurios hōra*=“morning hour” (“morning time of day,” rather, the specific sense of “hour” being a late one); or, finally, from Sansc. *ushāsa*=the dawn. *Smith* derives *aurora* from a root *ur*=to burn. Compare with this Heb. *ûr* and *ôr*=light, from *ôr*=to give light, to shine.]

A. Of persons (of the form Aurora only). *Roman Myth.:* The goddess of the morning. She was sometimes represented as drawn in a rosy-colored chariot by two horses. She appears as the fore-runner of the sun.

† In some examples it is difficult to determine whether *Aurora* means this mythic female or only the dawn.

"Soon as *Aurora*, daughter of the dawn,
Sprinkled with roseate light the dewy lawn."
Pope: Homer's Odyssey, bk. xvii., 1, 2.

"Till on her eastern throne *Aurora* glows."
Ibid., bk. xix., 61.

B. Of things (of either form):

1. Poetry: The dawn of day.

And, fast behind, *Aurora's* warmer ray
O'er the broad ocean pour'd the golden day."

"His bosom of the hue
With which *Aurora* decks the skies,
When piping winds shall soon arise
To sweep away the dew."

Cowper: Death of Mrs. Throckmorton's Bullfinch.

2. *Ord. Lang., Meteorol., &c.:* The generic term for that illumination of the night sky which is so common within the polar circles, and is called *Aurora borealis* or *A. australis*, according as it is seen near the North or near the South Pole. The phenomenon is visible in North America in the autumn and winter. Sometimes the light is of the ordinary flame color; green has been more rarely observed. The shapes it assumes are infinite in number and very transient.

"The amber midnight smiles in dreams of dawn."
Bayard Taylor.

Sometimes there is an arch, in which case it is placed at right angles to the magnetic meridian, showing its connection with magnetism. It affects electrical wires also: thus in France and elsewhere the aurora of August 30 and September 1, 1859, noiselessly worked the telegraphic needles and violently rung the alarm-bells. The aurora is believed to be produced by electric currents in the higher regions of the atmosphere. Its great elevation above the earth is evident from the fact that the same aurora has been witnessed at the same time in Moscow, Warsaw, Rome and Cadiz.

3. *Bot.:* A species of *Ranunculus*.

aurora australis. [AURORA (B., 2.).]

aurora borealis. [In Fr. *aurore boréale*; Sp. *aurora boreal*.] [AURORA (B., 2.).]

âu-rô-tél-lü'r-ite, s. [Lat. *aurum*=gold; *tellurium* (Mod. Lat.), the metal so called (q. v.); and Eng. suff. -ite.] A mineral, the same as *SYLVANITE* (q. v.).

âu-roûs, a. [From Lat. *aurum*=gold.]

1. *Ordinary Language:* Full of gold; (more loosely) containing more or less of gold.

2. *Chem.:* With gold univalent in its composition. † The aurous compounds are of but little importance. *Aurous chloride* ($AuCl$) is prepared by heating the auric chloride ($AuCl_3$) to 227°, till it ceases to give off chlorine. It is a yellowish mass, decomposed by water into metallic gold and auric chloride.

Aurous oxide is formed when caustic potash solution is poured on aurous chloride. It is a green powder, easily decomposed into metallic gold and auric oxide.

Aurous sulphide (Au_2S) is a black-brown precipitate, formed when hydrogen sulphide is passed into a boiling solution of auric chloride. It is soluble in ammonium sulphide.

âu-rûm, s. [Lat. *aurum*, whence Fr., Gael., & Ir. *or*; Wel. & Corn. *aur*; Sp. & Ital. *oro*; Port. *ouro*, *oiro*. The root is *aur*, *ur*=to burn, which occurs also in Lat. *uro*, supine *ustum*=to burn; Gr. *auō*=to dry, to kindle a fire; Sansc. *ush*. *Mahn* suggests O. Prussian *ausas*; Lith. *auksas*; Biscayan *urea*=gold.]

Chem.: A triatomic metallic element. It may be monatomic in the aurous compounds, which are quickly decomposed into metallic gold and auric salts. Symbol, Au; atomic weight, 197; sp. gr., 19.50; melting point, 1102° C. Gold is a soft yellow

metal, both ductile and malleable. It dissolves in nitro-muriatic acid, and it is obtained pure by precipitation from its solution by a ferrous salt. [GOLD.] The following are tests for aurum (gold) in solution. The sulphides are precipitated from acid solutions by H₂S, and are soluble in ammonium sulphide. Ferrous sulphate (FeSO₄) gives a brown precipitate, fusible by the blowpipe into a bead of metallic gold. Stannous chloride (SnCl₂) gives a brownish-purple precipitate (Purple of Cassius). Oxalic acid slowly reduces gold to the metallic state. Potassium cyanide gives a yellow precipitate, soluble in excess. A piece of paper dipped in a solution of gold becomes purple on exposure to the light. All salts of gold are reduced to the metallic state by heat.

***aurum fulminans.** [Lat. (*lit.*) = fulminating gold; gold darting lightning.] An explosive compound made by dissolving gold in aqua regia, and precipitating it with salt of tartar. A very small quantity of it becomes capable, by a moderate heat, of giving a report like that of a pistol. (Quincy.)

A. Ordinary Language: The act of listening to.

B. Med.: The art of discovering diseases within the body by means of the sense of hearing. Being carried out most efficiently by means of an instrument called a stethoscope, it is often called *mediate auscultation*. It is used to study the natural sounds produced within the body, especially the action of the lungs and heart, both in health and disease. Its operation can be facilitated by percussion of the surface. [STETHOSCOPE.]

†âus'-pî-câte, v. t. [From Lat. *auspicatus*, perf. par. of *auspico*=(1) to take the auspices; (2) to make a beginning; or from *auspicatum*, sup. of *auspicatus*, pa. par. of *auspico*, with the same meaning.]

1. To augur from certain circumstances that an event about to take place will be a happy one, or an enterprise to be commenced will have a favorable issue.

"Long may'st thou live, and see me thus appear,
As ominous a comet, from my sphere,
Unto thy reign: as that did *auspicate*
So lasting glory to Augustus' state."
B. Jonson: *Part of K. James' Entertainment*.

2. To make a favorable beginning of an enterprise, or simply to commence it.

"The day of the week which King James observed to *auspicate* his great affairs."—*Hacket: Life of Archbishop Williams* (1693), p. 173.

âus'-pîc-a-tõr-ỹ, a. [Eng. *auspicat(e)*; -ory.] Pertaining to auspices. (*Ogilvie*.)

†âus'-pîcē (sing.), âus'-pî-çēs (pl.), s. [In Ger. *auspicien* (pl.); Fr. *auspice* (sing.), *auspices* (pl.); Sp. *auspicio* (sing.), *auspicios* (pl.); Port. & Ital. *auspicio* (sing.); from Lat. *auspicium* (sing.)=(*lit.*) a bird seeing or watching; *auspex*, a contraction of *avis**pex*, from *avis*=a bird, and the root *spec*=to see.]

A. Of things:

1. *Lit. Among the Romans:* Omens, specially those drawn from the flight or other movements of birds, or less properly, from the occurrence of lightning or thunder in particular parts of the sky. These were supposed to be indications of the will of Heaven, and to reveal futurity. At first only the augurs took the auspices [AUGURS], but after a time civil officers, discharging important functions, had the right of doing so. Two kinds of auspices, however, arose—a greater and a lesser; the former reserved to dictators, consuls, censors, prætors, or the commander-in-chief in war; the latter permitted to less exalted functionaries. In the struggle which the plebeians carried on against the patricians for permission to share in political power, the chief argument used by the opponents of change was, the impossibility that a plebeian could take the auspices; but when, in B. C. 307, the flinging open of the augural college to all classes permitted him to try the experiment, it was found that he did the work as effectively (not to say as ineffectively) as any patrician whatever. The glory of a successful enterprise was universally assigned to the person who took the auspices, and not to the leader of the enterprise itself: hence the phrase arose, to carry on a war "under the auspices" of the emperor or some other high authority.

"The neglecting any of their *auspices*, or the chirping of their chickens, was esteemed a peculiar crime which required more expiation than murder."—*Bp. Story: Priesthood*, ch. v.

"He accordingly takes the *auspices*, and the lightning flashes from left to right, which is a favorable sign."—*Lewis: Early Rom. Hist.*, ch. xi., pt. i., § 1.

2. *Fig.*: Beneficial influence descending, or at least believed to descend, upon those engaged in arduous or perilous work, from some being or person of higher dignity than themselves. *Specially*—

(a) From the heathen gods.

"Great Father Mars, and greater Jove,
By whose high *auspice* Rome hath stood
So long."
B. Jonson.

Or (b) from a king or queen supposed to call down blessing from heaven.

"It [the armada] was so great,
Yet by the *auspice* of Eliza beat."
B. Jonson: *Masques at Court*.

(c) From the directors of an enterprise, who, though probably not themselves present with those engaged in executing it, are still sending them support, counsel, and aid of various kinds: thus when a missionary goes abroad "under the auspices" of the society or church which pays his salary and gives him more or less specific directions how to act. When success is achieved, those who directed the enterprise from home are contented to claim, as in fairness belongs to them, part of the glory; the modern augur or other dignitary, unlike the ancient Roman one, has not the effrontery to appropriate the whole.

¶ The singular *auspice* is now all but obsolete in this first sense; the plural is frequently used.

†**B. Of persons:** Persons who went through certain ceremonies when a marriage took place, not forgetting to wish good luck or happiness to the wedded pair.

"In the midst went the *auspices*; after them, two that sung."—*Masques at Court: Hymenæi*.

I. Lit.: Harshness or sourness to the taste.

"The sweetness of the ripened fruit is not the less delicious for the *austerity* of the cruder state."—*Horsley: vol. ii., Serm. 28.* (*Richardson*.)

II. Figuratively:

1. *Of persons:* Harshness, severity, crabbedness of temper.

¶ Blair thus distinguishes between *austerity* and some of the words which approach it in meaning:—"*Austerity* relates to the manner of living; *severity*, of thinking; *rigor*, of punishing. To *austerity* is opposed *effeminacy*; to *severity*, *relaxation*; to *rigor*, *clemency*. A hermit is *austere* in his life; a casuist *severe* in his application of religion or law; a judge *rigorous* in his sentences." (*Blair: Lectures on Rhetoric and Belles Lettres*, vol. i., 1817, p. 228.) Crabb takes essentially the same view.

"The Puritan *austerity* drove to the king's faction all who made pleasure their business, who affected gallantry, splendor of dress, or taste in the lighter arts."—*Macaulay: Hist. Eng.*, ch. i.

2. *Of things:* Harshness, ruggedness.

II. Technically:

1. Christian Apologetics, Historical Criticism, &c. Writers on the evidences of Christianity have had to define the words *genuine* and *authentic*, and have increased rather than diminished the obscurity attending on the subject. Thus Bishop Watson says: "A *genuine* book is that which was written by the person whose name it bears as the author of it. An *authentic* book is that which relates matters of fact as they really happened." (*Watson: Apology for the Bible*, Letter ii.) Some other writers, adhering to the fact that the words *author* and *authentic* are etymologically connected, call that *genuine* which Watson terms *authentic*, and that *authentic* which he denominates *genuine*. It would tend to clearness if all Christian apologists would in future adopt this latter use of the word. At present each author has to define the sense in which he individually employs it in his writings.

2. Law: Vested with all legal formalities, and legally attested.

3. Music: Having an immediate relation to the key-note or tonic. It is contradistinguished from *plagal*, i. e., having a corresponding relation to the fifth, or dominant, in the octave below the key-note.

I. *Of belief or deference*:1. *Claimed on behalf of persons*:

In the former case the word is in the plural, "the military *authorities*," "the civil *authorities*," "the ecclesiastical *authorities*," "the municipal *authorities*," or simply "the *authorities*;" in the latter it is in the singular, as in the abstract word "authority."

"The provincial *authorities* sent copies to the municipal *authorities*."—*Macaulay: Hist. of Eng.* ch. v.

"*Authority* herself not seldom sleeps,
Though resident, and witness of the wrong."

Authorized Version of the Bible, or simply *Authorized Version*. The version of the Bible into English, made at the suggestion of James I. by forty-seven learned divines. It took three years—viz., from 1607 to 1610—to execute, and was first published in 1611. It is the only one "appointed to be read in churches," and till quite recently its title-page contained the words "printed by authority." It has held its place so long more by its own great merits than by the artificial support of law; and while there are numerous minute defects, which have been corrected in the Revised Version of the New Testament, it remains, in all essential respects, the same Bible which for more than two centuries and a half has been the most potent factor in the spiritual education of the English-speaking race, and through it, more or less, of all the other families of mankind. Literally: "An act of faith," and an act of faith, no doubt it was, but faith terribly misguided. When the "Holy Inquisition" (of unsaintly memory) was in the plenitude of its power in Spain, it ever and anon found that condemned "heretics" and other obnoxious offenders so accumulated upon its hands that a general jail or dungeon delivery became expedient. The necessary clearance was effected by means of an "auto-de-fe." There were different varieties of this exhibition, more or less public or private, that called the *auto publico* general being the most dignified of the whole. When one of this type took place, there was a great gathering of all the civil and ecclesiastical grandees, who proceeded to an amphitheater or other suitable place of meeting on richly-caparisoned steeds, and with music playing, the prisoners being taken with them. The general public also were permitted to witness the proceedings. After mass had been said and a sermon preached, extracts were read from the records of the trial conducted and the sentences pronounced by the judges of the inquisition, and it was to this part of the proceedings that the term *auto de fe* was primarily applied. For some of the condemned there were minor, and for others capital sentences prescribed. The unfortunates were then handed over to the civil power, the representative of the inquisition never failing to urge with earnestness that they might be mercifully and kindly dealt with. Foreboding (with sorrow?) that this petition would be rejected, those who preferred it had felt it their duty, if not even their privilege, to furnish fagots, lights, a gallows, executioners, and all other necessary appliances for making away with the persons for whom they had solicited tender treatment. "Heretics" who recanted and similar penitents were first strangled and then burned; but hanging was considered too good for those who remained obstinate in their errors: they were simply burned alive.

The first *auto de fe* was held in Spain in 1481, the last in 1813. The prisoners who suffered minor or capital punishments were, in all, 341,021. [INQUISITION.]

āv'-ēr-āge (1) (O. Eng.), āu'-ar-āge (au=av), ār'-y-āge, ār'-rage, ār'-age (O. Scotch), s. [In Dan. *høveri* is=average, soccage-duty, service due to the landlord; *høveribonde*=soccager, bondman; *høveriplygtig*=obliged to soccage-duty; *høvarbeide*=service due to the landlord, soccage-duty, average; *høvdag*=the day on which soccage-duty is performed (Tauchnitz: Dan. Dict.) Wedgwood derives this group of words from Dan. *hof*=a court residence or palace, and believes that in this direction the etymology of Eng. *average* (1) should be sought. The derivation generally given is from Low Lat. *averagium* and *averia*, in the sense of a portion of work done by animals of burden; also a charge upon carriages. So, also, the heriot formerly paid to the lord of a manor on the death of a tenant was the best live beast, or *averium*, which the deceased tenant had possessed.] [AVER (2).]

Old Feudal Law: The duty or service which the tenant was bound to pay to the king or to the lord of the manor by means of his animals of burden and his carriages.

"*Arage*, v. t., pervaies. *Average* signifies service quhilk the tennent aucht to his master be horse or carriage of horse."—Skene: *De Verb. Signif.* (1599). (Jamieson.)

¶ The term *arriage*, in the legal phrase "arriage and carriage," is the word *average* modified. [ARRIAGE.] The feudal obligation now mentioned was abolished by 20 Geo. II., c. 50. The money paid for exemption from the burden of arage was called *aver-penny* (q. v.). (Jamieson.)

āv'-ēr-āge (2) (age=īg), s. & a. [In Dut. *averij*=(1) average, (2) damage; Sw. *averi*=average; Dan. *haveri*=(1) average, (2) damage which a ship receives, (3) waste of wares; Ger. *avarie*, *avare*, *haferei*, *haverei*=average; Fr. *avarie*=damage done to a ship, or any damage; O. Fr. *average*; Sp. *averia*=(1) average, (2) damage done to a ship; Port. *avaría*=allowance out of freight to the master of a ship for damage sustained, or a contribution by insurers to replace losses; Low Lat. *averagium*, in the sense of loss of goods in transportation. Santa Rosa and Marsh derive this from Turk. *avaría*=aid, a government exaction in the Levant; but Wedgwood considers it to be from Arab. *āwar*=a defect or flaw.]

A. As substantive:

I. Ordinary Language:

*1. Formerly: The apportionment of losses by sea or elsewhere in just proportions among different individuals concerned. [A., II. 1.] From this the second sense of the word gradually arose.

fāte, fāt, fāre, amidst, whāt, fāll, father; wē, wēt, hēre, camel, hēr, thēre; pīne, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rāle, fūll; trȳ, Sȳrian. æ, œ=ē; ey=ā. qu=kw.

2. *Now*: The medium or mean proportion between certain given quantities. It is ascertained by adding all the quantities together and dividing their sum by the number of them. For instance, to ascertain the average income of the clergy of any given church, their several incomes must all be added together, and the sum total be divided by the number of clergymen. The more that the extremes vary, the less possible is it to reason out any individual case from a study of the average. Thus the knowledge of the average age at which people die in the United States affords no aid whatever toward discovering when any particular person will die, for some do so almost at the moment of birth, and others linger on for nearly, if not even quite, a hundred years. But for finding out general laws, the study of averages is of immense value. The average of *qualities* is ascertained in a similar way to that of *quantities*.

"... and the average of intellect and knowledge was higher among them than among their order generally."—*Macaulay: Hist. Eng.*, ch. xi.

¶ *On an average*: When an average is taken.

II. Technically:

1. Law, Nautical and Commercial:

(a) *Average, or general average*: A contribution made by merchants proportionally to the value of the goods which each has on board a particular vessel, to meet the loss which arises when in a storm the goods of one have had to be cast overboard to lighten the ship.

"This contribution seems so called because it is so proportioned after the rate of every man's average, or goods carried."—*Cowell*.

(b) *Particular average*: The sum required to make good any fortuitous injury to the goods belonging to one person. It falls on him or on his insurers.

(c) *Petty average*: An estimate of the probable aggregate amount of various petty charges, as for harbor dues, pilotage, &c., which the captain of a vessel must in the first instance pay, but which, of course, do not fall on him ultimately. Formerly they were often met, as they still are, by agreement between the owners of the vessel and those to whom the goods sent in it belongs. Hence in bills of lading the words occur, "paying so much freight, with primage and average accustomed."

2. *Corn-trade averages*: The medium price of grain in the leading markets.

B. *As adjective*: Ascertained by taking a medium or mean proportion between given quantities.

"... the ascertained differences are chiefly in the average light and heat..."—*J. S. Mill: Logic*, 2d ed., vol. ii., ch. xx., p. 103.

(*Lyell: Geology*, 1850, p. 347.)

¶ Regarding the distinction between *awe*, *reverence*, and *dread*, Crabbe considers that *awe* and *reverence* both denote a strong sentiment of respect, mingled with a certain measure of fear, but the former is the stronger of the two; while *dread* is unmingled fear for one's personal security. Sublime, sacred, and solemn objects awaken *awe*, exalted and noble ones produce *reverence*, and terrific ones *dread*. The solemn stillness of the tomb will inspire *awe*, even in the breast of him who has no *dread* of death.

A. As substantive:

1. *Ordinary Language*: (Essentially a scientific word, though in some of its technical significations it has made way into ordinary language.)

1. A straight line, real or imaginary, passing through a body, and around which that body revolves, or at least may revolve. *Spec.*, the imaginary line connecting the poles of a planet, and around which the planet rotates. [II. *Astron.*] (*Lit. & fig.*)

(1) *Literally*:

"On their own *axis* as the planets run,
And make at once their circle round the sun."
Pope: *Essay on Man*, 313.

(2) *Figuratively*:

"Meanwhile, the heart within the heart, the seat
Where peace and happy consciousness should dwell,
On its own *axis* restlessly revolves,
Yet nowhere finds the cheering light of truth."
Wordsworth: *Excursion*, bk. iv.

2. A straight line, real or imaginary, passing through a body, around which the several parts of the body are symmetrically arranged.

"The lofty mountains on the north side compose the granitic *axis*, or backbone of the country"—Darwin: *Voyage round the World*, ch. x.

II. *Technically*:

1. *Geom.*: An imaginary line drawn through a plane figure, and about which the plane figure is supposed to revolve, with the result of defining the limits of a solid. Thus, a circle revolving about one of its diameters, and at right angles to that diameter, will constitute a sphere; hence the *axis* of a sphere is any one of its diameters. If an isosceles triangle revolve around an imaginary line connecting its apex with the center of its base, it will constitute a cone; hence the *axis* of a cone is an imaginary straight line drawn from its apex to the center of its base. A rectangle revolving around a straight line connecting the centers of any two of the opposite sides will produce a cylinder; hence the *axis* of a cylinder is a straight line drawn from the center of its apex to the center of its base. The *axis* of a parabola is the diameter which passes through its focus. For the abscissa of the axis, the subtangent, &c., of the axis, see ABSCISSA, SUBTANGENT, &c. In an ellipse the *axis major* (Lat.=greater axis) is the diameter which passes through the foci; and the *axis minor* (Lat.=lesser axis) the diameter at right angles to the *axis major*. In a hyperbola, the *axis major* is the diameter which passes through the foci; the *axis minor* is the distance between two points formed when a straight line drawn through the center of the hyperbola, and at right angles to its major axis, is intersected by a circle described around a principal vertex as its center, and with a radius equal to the eccentricity of the hyperbola.

Conjugate axis of an ellipse or of a hyperbola: The straight line drawn through its center perpendicular to the transverse axis.

Transverse axis of an ellipse or of a hyperbola: The straight line drawn through the two foci.

The axis of symmetry of a body: Any line in a regular polygon bisecting an angle or bisecting a side perpendicularly.

"... a rotation of a body of regular figure about its *axis* of symmetry."—Herschel: *Astron.* (5th ed., 1858), § 56.

2. *Astron.* The *axis of the earth* or the *axis of rotation of the earth*, is that diameter about which it revolves. It is the one which has for its extremities the north and south poles. The term is similarly used of the sun, the moon and the planets. (Herschel: *Astron.*, 3d ed., 1858, §§ 22, 57, &c.)

"... both Venus and Mercury have been concluded to revolve on their *axes* in about the same time as the Earth."—Herschel: *Astron.* (5th ed., 1858), § 509.

Axis of the celestial sphere: The imaginary line around which the heavens appear to revolve. It is the axis of the earth produced.

Axis of an orbit. The major axis of the orbit of a planet is the line joining the aphelion and perihelion points. The minor axis is the line perpendicular to the former, and passing through the center of the ellipse.

3. *Min.*: The term *axis* of a prismatic or other crystal is used in the same sense as in Geometry. (Phillips: *Mineral.*, 2d ed., 1819, p. lxxxiii.)

4. *Mechanics*:

The axis of suspension of a pendulum is the point from which it is suspended, and consequently around which it turns.

The axis of oscillation of a compound pendulum is an axis constituted by a series of points, so situated that their motion is neither retarded nor accelerated by their constituting part of a solid body, which, of course, can only move together. (Atkinson: *Ganot's Physics*, 3d ed., 1868, § 70.)

Axis of a balance: The line around which it turns. *Axis in peritrochio*. [Gr. *peri*=round about, and *trochos*=a wheel.] The same as the wheel and axle. One of the six mechanical powers, consisting of a *peritrochium*, or wheel and an axle.

5. *Magnetism*: The line supposed to connect the north and south poles of a magnet.

6. *Optics*:

Axis of a lens: A line passing through the center of its curved, and perpendicular to its plane, surface. (Brewster: *Optics*, 1831, § 34.)

Optic axis: The line corresponding to this in the eye. The ray of light passing along it is the only one which is not refracted. The other rays of light entering the eye have axes also, but this is the only one to which the term *optic axis* is applied.

Visual axes: The axes of the several rays of light which enter the eye. [See *Optic Axis* above.]

"... due convergence of the *visual axes* . . ."—Herbert Spencer: *Psychol.*, 2d ed., vol. ii., p. 170, § 327.

Axis of refraction: A straight line drawn perpendicular to the plane of a transparent body, and passing through the point of incidence of a luminous ray, striking it from without.

Axes of double refraction: All doubly refracting substances have one or more lines, or one or more planes, along which no doubly refracting force exists. If there is one such line or plane, then the body is said to have one axis, or plane of axes of double refraction; if two, two axes, or planes of axes, of double refraction, and so forth. A *real axis*, or *plane of axes of double refraction*, is one in which the doubly refracting force really does not exist; while a *resultant axis*, or *plane of axes*, or an *axis* or *plane of compensation*, is one in which it exists, but is neutralized by a counter force of equal intensity. A *positive axis of double refraction* is the term used when the refracted ray is bent toward the axes, or plane of axes of the body; and a *negative axis of double refraction* is the expression employed when it is bent in the contrary direction.

7. *Architecture*:

Spiral axis: The axis of a spirally-twisted column.

Axis of an Ionic capital: A line passing perpendicularly through the middle of the eye of the volute.

8. *Geology*: An imaginary line on the opposite sides of which the strata dip in different directions. If the angle formed at their point of junction be a salient one, they form an *anticlinal axis*, or *ANTICLINAL* (q. v.); but if it is a re-entering one, then they constitute a *synclinal axis*, or *SYNCLINAL* (q. v.). (Lyell: *Man. of Geol.*, 4th ed., 1852, p. 57.) [I., 2.]

9. *Botany*: The axis is that part of a plant around which the organs are symmetrically arranged. The *ascending axis* means the stem. (Lindley: *Introd. to Bot.*, 3d ed., 1839, p. 69.) The *descending axis* is the root. (*Ibid.*) *Necessary axes* are axes in addition to the main one, found in the stems of Calycanthus, Chimnanthus, and some other plants. (*Ibid.*, p. 96.) The *appendages of the axis* are scales, leaves, bracts, flowers, sexes, and fruit. (*Ibid.*, p. 110.) The *axis of inflorescence* is a peduncle which proceeds in a nearly straight line from the base to the apex of the inflorescence. (*Ibid.*, p. 153.)

10. *Anatomy*:

(a) *The axis of the body*: The vertebral column around which the other portions of the frame are arranged.

"When the skull remains in connection with the vertebral column, it will be seen that its *axis* is a continuation forward of the *axis* of that column, consisting of the bodies of the vertebrae."—Flower: *Osteol. of the Mammalia*, p. 96.

"In the deer the *axis* of the face is nearly in the same line with that of the cranium . . ."—*Ibid.*, p. 171.

"... the vertebral being slightly bent between the atlas and *axis*."—Todd & Bowman: *Physiol. Anat.*, vol. i., p. 295.

B. As adjective: Pertaining to an axis in the anatomical sense. [II., 10.]

ăx'-is (2), s. [Lat. *axis*=an Indian quadruped, probably the deer described below.] A species of deer, the *Cervus axis*, found in India. It is spotted like the Fallow-deer, from which, however, the adult males at least may be distinguished by their possessing round horns without a terminal palm. azelaic acid, s.

Chem.: $C_7H_{14}(CO.OH)_2$. A bibasic acid formed along with suberic acid by oxidizing castor oil. It is soluble in cold ether and in boiling water. It forms large white needle crystals, which melt at 106° . By heating with caustic baryta, it yields heptane, C_7H_{16} .

A'-zēl-fa-fage, s. [Corrupted Arabic.] A fixed star, numbered $4\frac{1}{2}$ in the scale of magnitude; it is called also Cygni.

āz'-i-mūth, s. [In Dut., Ger., & Sp. *azimuth*; Fr. & Port. *azimut*; Ital. *azzimutto*; from Arab. *assamt*, pl. *as-sumūt*=a way, a path.] [ZENITH.]

Astronomy:

1. *Sing.*: "The angular distance of a celestial object from the north or south point of the horizon (according as it is the north or south pole which is elevated), when the object is referred to the horizon by a vertical circle." Or "the angle comprised between two vertical planes, one passing through the elevated pole, the other through the object." It is generally reckoned eastward or westward, from the north or south point for 180° either way; but Herschel prefers always reckoning it from the points of the horizon most remote from the elevated pole westward, so as to agree in its general direction with the apparent diurnal motion of the stars. Of course he therefore counts from 0° to 360° . (*Herschel: Astron.*, 5th ed., 1858, §103.)

2. *Plural*: Azimuths, called also *vertical circles*, are great circles intersecting each other in the zenith and nadir, and cutting the horizon at right angles in all the points thereof. On these are reckoned the altitude of the stars, and of the sun when he is not in the meridian.

¶ *Magnetical Azimuth*: Magnetical azimuth is an arch of the horizon, contained between the sun's azimuth circle and the magnetical meridian; or it is the apparent distance of the sun from the north or south point of the compass.

azimuth and altitude instrument. An astronomical instrument designed to ascertain the altitudes and azimuths of the heavenly bodies at any particular time. It has two axes, the principal one vertical and the other horizontal; the former, therefore, corresponding to a vertical circle of the heavens, and the latter to the celestial horizon. The angles measured on the latter are therefore azimuths or differences of azimuth, and those on the former zenith distances, according as the graduation is from the upper point of the limb, or a point distant from it 90° . (*Herschel: Astron.* §§182-187.) [ALTAZIMUTH.]

azimuth compass. An instrument used for finding the sun's magnetical azimuth, or the amplitude of any other heavenly body.

azimuth dial. A dial, the stilo or gnomon of which is at right angles to the plane of the horizon.

āz'-i-mūth-al, a. [Eng. &c., *azimuth*, and Eng. suff. -al. In Fr & Port. *azimutal*; Sp. *azimuthal*.] Pertaining to the azimuth.

azimuthal error. The deviation of a transit instrument from the plane of the meridian. Its effect is greatest in the horizon, and vanishes in the zenith. It is sometimes called the "meridian error." (*Hind*.)

āz-ō-bēn'-zēne, s. [From Eng. *azo(te)*=nitrogen, and *benzene* (q. v.).]

Chemistry: C_6H_5N || Obtained by distilling nitrobenzene with an alcoholic solution of potash. The alcohol is oxidized to aldehyde. Azobenzene can be obtained by the action of sodium amalgam and water on an alcoholic solution of nitrobenzene. Azobenzene crystallizes in large yellow-red plates, which melt at 66.5° , and boil at 293° . Concentrated nitric acid converts it into nitro-substitution compounds. Boiling sulphuric acid converts it into azobenzene-sulphonic acid, $C_{12}H_9N_2SO_3H$. Reducing agents convert azobenzene into hydrazobenzene,

āz-ō-bēn-zō-īc, a. [Eng. *azo(te)*, and *benzoic* (see def.).] Pertaining to nitrogen, and also to gum benzoïn, a resin produced from *Styrax benzoïn*, a tree from the Malay archipelago.

Geology. Azoiic Rocks: Those in which no traces of organic remains exist, and which are by some assumed to have been deposited before life commenced in this planet.

¶ As the constant tendency of geological investigation has been to find traces of fossils in sedimentary rocks previously deemed azoiic, and as, moreover, there is good reason to believe that in many cases in which they have not been found they once existed, but have since been destroyed by metamorphic action, students of nature require to be very careful as to what rocks they venture to characterize as azoiic.

āz-ō-mē'-than, s. [From Eng. *azo(te)*=nitrogen, and *methan* (q. v.).]

Chem. [CYANIDE.]

"... those of azotized matters, whether animal or vegetable."—Todd & Bowman: *Physiol. Anat.*, i. 13.

"... various azotized substances."—*Ibid.*: vol. ii., p. 203.

azotized substances. Nitrogenous compounds, or those containing nitrogen, the most essential element of food, yet, by itself, unable to sustain life. Foods, which build up the bodies of men and animals, are divided into two great classes, viz.—*flesh formers*, or those which repair the waste of tissue; and *heat-generators*, or those which keep up the heat and movements of the body. The former are called nitrogenous, and the latter non-nitrogenous or carbonaceous. The principal animal nitrogenous compounds are albumen, fibrin, gelatine, and casein, all of which are almost identical in composition, and contain from 16 to 18 per cent of nitrogen. Albumen, fibrin, and gelatine are found in the muscles, blood and bones of animals, while casein is found in the milk. Similiar nitrogenous compounds occur in vegetables; thus we find albumen in potatoes, turnips, apples, &c.; fibrin in wheat, barley and other cereals; and casein in peas, beans and lentils. The nutritive value of an infusion of tea or coffee is very small, the amount of nitrogen present being almost inappreciable. The non-nitrogenous foods

are sugar, starch, and fat or oil. These, by oxidation in the body, produce heat and motion, and are hence termed heat-givers or force-producers.

āz-ō-tī'z-īng, p. r. par. [AZOTIZE, v.]

ā-zō'-tō-, as a prefix. [From *azot(e)*; -o.] Combined with azote, as azoto-sulphuric.

THE second letter and the first consonant in the English alphabet, as it is also in the other languages of the Aryan family spoken in Europe. The characters in use in these several tongues having come through the Greek from some old form of speech, probably the Phœnician, belonging to the Semitic (better called the Syro-Arabian) family, it was

to be expected that the letter corresponding to B would occupy the same place in the Semitic as in the previously-mentioned Aryan alphabets. Investigation shows this to be the case, to a considerable extent at least. A sound and character corresponding to the English *b* and the Greek *bēta*, is the second letter and the first consonant in Phœnician, Hebrew, Samaritan, Aramaic, Arabic, and Coptic. In Ethiopic, however, *bēth* stands tenth instead of second in order. Turning next to some of the Aryan languages of Asia, we find that in Armenian *be* is the twenty-sixth of thirty-eight letters; and in Sanscrit, Mahratta, &c., *bū* or *bā* is generally placed twenty-third in the list of consonants, where it is preceded by *phū* and followed by *bhū*. Returning

again to the Semitic, *bēth*, the name given to the second letter of the Hebrew alphabet, is really Aramaean. Like the corresponding word in Hebrew, *baith*, it signifies a house, to which it has some faint resemblance. [A, ALPHABET.]

B is a flat mute [MUTE], the voice not being so entirely shut off in pronouncing it as it is when one of the sharp mutes, *p* or *f*, is uttered. The *b* sound is produced by compressing the lips, a vowel being added to render it audible. It is hence called a labial, from Lat. *labium*=a lip, plur. *labia*=lips; its other associates in the same category being *p*, *f*, and *v*, with which it is often interchanged in the cognate languages. Thus to *bake* is in O. H. Ger. *pachan*, and in Slav. *peshtshi*. The Eng. *life* is the Ger. *leben*; and while *life* is the substantive, *live* is the verb. So the Lat. *balena* is from the Gr. *phallaina*, *phalaina* with *ph* pronounced as *f*, while from one or other comes the Eng. *whale*. The Eng. *have* is from the Lat. *habeo*. So also the Sanscrit *vyagra*=a tiger, becomes the Mahratta *vagh* (pronounced *wagh*), and is transformed into the Hindi *bagh*. Other letters than the labials can be interchanged with *b*: thus the Greek *molubdos* and the Lat. *plumbum*=lead, unlike as they appear, are akin, *m* being exchanged for *p*; and the old form of the Lat. *bellum*=war, was *duellum*, whence our Eng. words *bellicose* and *duel*.

(a) For Lat. *Baccalaureus*, as *Artium Baccalaureus*=Bachelor of Arts.

(b) For *Bachelor*; as B. A.=Bachelor of Arts; B. D.=Bachelor of Divinity; B. M.=Bachelor of Medicine; B. L.=Bachelor of Laws.

2. In Music: For *bass*. Similarly B. C. is used for *basso continuo*=thorough bass.

3. In Chemistry: For the element boron, of which it is the symbol as well as the initial.

II. B, as a symbol, is used—

1. In Numeration, in Greek, Hebrew, Arabic, and even occasionally in English, for 2. But B, in Greek is the diacritical mark for 2,000. In Latin B stands for 300, and B for 3,000.

2. In Music: As the seventh note of the diatonic scale. It answers to the Italian and French *si*. In Germany it is=B flat.

3. In Chemistry [I. 3.]

Bā'-al, *s.* [In Ger., &c., *Baal*; Gael. *Beil*; from Heb. *Baal*; Aram. *Baal*, and *Bēel*=(1) master, possessor, (2) husband (generally with the article *ha*)=the, *hab-Baal*=Baal; in Sept. Gr. *ho Baal*=the Baal (masc.) (Judges ii. 13), *hē Baal*=the Baal (fem.) (Jer. xix. 5).]

1. *Lit.*: The chief male divinity among the Phœnicians, as Ashtoreth was the leading female one. [ASHTORETH.] The Carthaginians, who sprang from the Phœnicians, carried with them his worship to their new settlements, as is proved, among other evidence, by the names of some of their world-renowned heroes: thus Hannibal, written in Punic inscriptions, *Hannibaal*, signifies "The grace of Baal;" and Hasdrubal, or Asdrubal, *Azra-baal*=*"Help of Baal."* The worship of Baal early existed among the Canaanites and the Moabites, whence it spread to the Israelites, becoming at last for a time completely dominant among the ten tribes, and to a certain extent even among the two, in consequence of the ill-advised marriage of Ahab with Jezebel, daughter of Ethbaal (the name means "With Baal,") king of Sidon. A number of places in Palestine and the neighboring countries commence with *Baal*, such as Baal-gad (Josh. xi. 17), Baal-meon (Numb. xxxii. 38), but whether in the sense of "lord," "possessor," or signifying "Baal," is a matter of dispute. One place is simply called Baal (1 Chron. iv. 33). This divinity seems to have symbolized the sun, and less

frequently the planet Jupiter. He was worshipped under different forms, or in different relations; thus there were Baal-berith=the Covenant Baal or lord; Baal-zebub [BEELEZEBUB]=the fly-lord; Baal Peor=the Baal of Mount Peor, or Baal of the opening, the Moabitish national divinity. Perhaps the Babylonian *Bel* was only Baal with a dialectic difference of spelling, though Prof. Rawlinson thinks differently (Isa. xlv. 1). [BEL.] There was an affinity between Baal and Moloch. [MOLOCH.] The Beltein or Beltane fires, lit in early summer in Scotland and Ireland, seem to be a survival of Baal's worship. [BELTANE.]

" . . . and called on the name of *Baal* from morning even until noon, saying, O *Baal*, hear us."—1 Kings, xviii. 26. (See also *Jeremiah* xix. 5.)

¶ The Heb. plural *Baalim* often occurs. It may signify images of Baal, or that imaginary god in different relations. (Judges viii. 33.)

2. *Fig.*: Any one held by the person using the term to be a false priest.

"The priest of *Baal* was reviled and insulted, sometimes beaten, sometimes ducked."—*Macaulay. Hist. Eng. ch.* xiii.

(*Sayce in Trans. Soc. Bibl. Archæol.* vol. i., pp. 298, 309.)] A place or circumstances in which confusion of sounds—as, for instance, by several people speaking at once—is the predominating characteristic. The reference is to the confusion of tongues divinely sent in consequence of the building of the Tower of Babel (Genesis xi. 1-9.)

The magnificent Temple of Belus, asserted to have been originally this tower, is said to have had lofty spires, and many statues of gold, one of them forty feet high. In the upper part of this temple was the tomb of the founder, Belus (the Nimrod of the sacred Scriptures), who was deified after death. (*Blair*.) The Birs Nimroud, examined by Rich. Layard, and others, is considered by some persons to be the remains of the Tower of Babel.

The general opinion is that *baccalaureate* is compounded of Latin *bacca*=a berry, and *laureatus*=crowned with laurel, from *laurea*=the laurel or baytree; the reason, according to Calepinus, being that students, on gaining the B. A. degree, were crowned with a garland of laurel or bay berries; a statement resting on very doubtful historical authority. In Sp. the word is *bachillerato*, and in Port. *bachalorado*, terms in which the connection with *bacca* and *laureatus* disappears. In Low Latin *baccalarius*, the original word whence *baccalaureus* may have sprung, was unconnected with *bacca*=a berry, and signified a tenant of a kind of farm

in the south of France and the north of Spain called *baccalaria*. Such tenants were bound to give a certain amount of labor to their feudal lord. Adverting to the locality where the *baccalarii* lived, Wedgwood thinks the word may have had a Basque origin.] [BACHELOR.]

Classic Myth.: The Roman god of wine, generally identified, whether correctly or not, with the Greek Dionysos, the divine patron of wine, inspiration, and dramatic poetry. His worship, or at least the frenzied form of it, is said to have arisen in Thrace and reached Rome through the Greek colonies in Southern Italy. Like Dionysos, he was one of the *Dii Selecti*, or "Selected gods." He was fabled to be the son of Jupiter and Semele, the daughter of Cadmus. He figures in perennial youth, with a crown of vine or ivy leaves around his temples, and holding in his hand a spear bound with ivy. Tigers, lions, or lynxes are yoked to his chariot, while he is accompanied by bacchanals, satyrs, and his foster-father and preceptor Silenus. He is said to have conquered India, and his worship [BACCHANAL] has more an Oriental than a European aspect. In the foregoing article the most common form of the myth is given; there are others so inconsistent with it, and with each other, that possibly, as Cicero, Diodorus, and others think, several personages have been confounded together under the name of Dionysos or Bacchus. Bacchus married Ariadne when she was deserted by Theseus at Naxos. [DIONYSOS.]

"*Bacciferous* trees are of four kinds. (1) Such as bear a caliculate or naked berry; the flower and calix both falling off together, and leaving the berry bare; as the sassafras trees. (2) Such as have a naked monospermous fruit: that is, containing in it only one seed; as the arbutus. (3) Such as have but polyspermous fruit; that is, containing two or more kernels or seeds within it; as the *Jesminum*, *ligustrum*. (4) Such as have their fruit composed of many acini, or round soft balls, set close together, like a bunch of grapes; as the *uva marina*."—*Ray*.

Baconian philosophy. The inductive philosophy of which it is sometimes said that Lord Bacon was the founder; This, however, is an exaggerated statement. What Lord Bacon did for this mode of ratiocination was to elucidate and systematize it; to point out its great value, and to bring it prominently before men's notice; lending it the support of his great name at a time when most of his contemporaries were satisfied with the barren logic of the schools. The great triumphs of modern science have arisen from a resolute adherence on the part of its votaries to the Baconian method of inquiry. [A POSTERIORI, INDUCTION, INDUCTIVE.]

bāc-tēr-i-ūm, s. (Pl., Bacteria). [Gr. *baktērion*, from *baktron*=a rod.] A microscopic organism of various forms and shapes. Rod-shaped bacteria are specifically termed *bacilli*, those which are curved or twisted, spiral-like, are called *spirilli*, and those which are spherical are termed *cocci*, which, where found single, are known as *monococci*; *diplococci* are those which grow in pairs, *streptococci* those which form chains, and *staphylococci* those which appear in clusters. The bacteria are so very small that many millions are necessary to cover a space as large as a pin's head. They multiply rapidly under favorable conditions as to temperature and nourishment, and a single bacterium can produce within 24 hours many millions of new ones. Their nourishment consists of albuminous substances, which they convert into complex chemical compounds, many of which are highly poisonous. These poisons are called *toxins*, and a very minute quantity is sufficient to produce destructive changes in the blood and tissue of man and animal, causing various diseases and death. The study of the chemistry of bacteria has shown that many of them do not grow upon living matter, but will flourish upon decomposing and putrefying substances, especially those which will only multiply in animal tissue, and in combination with certain mineral or vegetable acids form definite chemical compounds, some of which resemble the vegetable alkaloids, not alone in their basic properties, but also in their poisonous character. These products are termed *ptomaines*. [PTOMAINE.] See Germ Theory.

It is especially from this species that the walking-sticks mentioned above are obtained. They are sometimes imported from Jamaica under the name of Tobago canes.

Humorously. Argumentum ad baculum. [ARGUMENTUM.]

bād, bād'de, a. & s. [Etym. doubtful. Horne Tooke thinks it the pa. par. of *bay*=to bark at, to villify. Junius derives it from Goth. *bauths*=insipid; Johnson from "*quoad*" (the best spelling is *kwaad*)=bad; Richardson from the pa. par. of A. S. *beaten*=to beat; Webster from Pers. *būd*=bad, evil, depraved (in Hind. also *būd* is=bad). Mahn and Wedgwood, adopting Webster's view, add also the cognate words, Dut. *boos*=wicked, evil, angry; Ger. *böse*=bad; O. H. Ger. *bōsi, pōsi*. In A. S. *bād* is=a pledge, a thing distrained; and *beado* is=battle, war, slaughter, both things bad in one point of view; while in the Semitic tongues, as pointed out by Webster, Arab. *bada* and Heb. *ābād*, Chal., Syr., and Sam. *ābād* is=to perish; and in the active conjugation, to destroy.]

A. As adjective: The opposite of good; a word of very general application, signifying whatever person or thing is so exceedingly inferior to the average of his or its class as to require a positive word to express the notable deficiency.

I. Of persons:

1. Morally depraved.

"Thou may'st repent,
And one bad act, with many deeds well done,
May'st cover."—Milton.

2. Very inferior in intellectual characteristics, as in skill, knowledge, &c.

"In every age there will be twenty bad writers to one good one; and every bad writer will think himself a good one."—Macaulay: *Hist. Eng.*, ch. xxiv.

3. With marked physical defects.

*4. Sick. (Followed by of.)

"Bad of a fever."—Johnson.

II. Of things:

1. Notably deficient in that which constitutes excellence in the thing specified. Thus a *bad road* is one rough, muddy, stony, or with other evil qualities; *bad weather* is weather unsuitable for out-door exercise and for agricultural labor, &c. *Bad sight* is sight much beneath the average in power of defining objects with clearness; a *bad coin* is one in some way debased, so as not to be worth the sum for which one attempts to pass it current.

2. Pernicious, hurtful; producing noxious effects. (Followed by for.)

"Reading was bad for his eyes; writing made his head ache."—Addison.

B. As substantive:

I. Of persons: Wicked people.

"Our unhappy fates
Mix thee amongst the bad, . . ."—Prior.

II. Of things:

1. That which is bad or evil.

" . . . Take heed that thou speak not to Jacob either good or bad."—Genesis xxxi. 24.

2. Badness, wickedness; a wicked, vicious, or corrupt state.

"Thus will the latter, as the former, world
Still tend from bad to worse."

Milton: *P. L.*, bk. xii.

bāde, bāde, *bād, pret. of verb. [BID.]

"But bade them farewell, . . ."—Acts xviii. 21.

bādge, *bāge, *bāge (Eng.), bād-gie, bāu-gie (Scotch), s. [In the Anglo-Saxon *beag* is=a crown, and *beah*=a bracelet, a neck-ring, a lace, garland, or crown; Dut. *bag*=a pendant, an eardrop, a ring; Fr. *bague*=a ring; Lat. *bacca*= . . . the link of a chain. Skinner, Minshew, Mahn, &c., connect *badge* with these words. Mahn admits the affinity of *badge* to the A. S. *beag* and *beah*, and adds as cognate words, Fries. *beage*=bandage; Low Lat. *bauga, bauga, boga*=bracelet, and *bagia, bagea*=sign. Webster ventures on no hypothesis; John-

son believes it to be from Lat. *bajulo*=to carry a heavy burden; and Wedgwood, with some misgiving, makes it one of a group with *botch* and *patch*.] [BADGE, v.] (See example.)

A. Ordinary Language:

I. Lit.: A mark or cognizance worn on the dress to show the relation of the wearer to any person or thing. [B., Her.]

"Yet now I spy, by yonder stone,
Five men—they mark us, and come on;
And by their badge on bonnet borne,
I guess them of the land of Lorn."

Scott: *Lord of the Isles*, iii. 13.

"He wore the garter, a badge of honor which has very seldom been conferred on aliens who were not sovereign princes."—Macaulay: *Hist. Eng.*, ch. xii.

II. Figuratively:

1. That by which any person, or any class or rank of men, is conspicuously and characteristically marked out.

"Furthermore, he made two changes with respect to the chief badge of the consular power."—Lewis: *Early Rom. Hist.*, ch. xii., pt. i., § 4.

"The outward splendor of his office is the badge and token of that sacred character which he inwardly bears." Atterbury.

2. A characteristic mark or token by which anything is known.

"To clear this spot by death at least I give
A badge of fame to slander's livery."

Rape of Lucrece, 1053, 4.

"Sweet mercy is nobility's true badge."

Shakesp.: *Titus Andron.*, i. 2.

B. Her.: A cognizance. [COGNIZANCE.] A mark of distinction somewhat similar to a crest, but not placed on a wreath, nor worn upon the helmet. Princes, noblemen, and other gentlemen of rank had formerly, and still retain distinctive badges. Thus, the broom-plant (*Planta genista*) was the badge of the royal house of Plantagenet, a red rose that of the line of Lancaster, and a white one that of the line of York. The four kingdoms, or old nationalities, the union of which constitutes the home portion of the British empire, and the nucleus of the rest, have each a distinct royal badge. These were formally settled by sign-manual in 1801, and are the following: **For England:** A white rose within a red one, barbed, seeded, slipped, leaved proper, and ensigned with the imperial crown. **For Scotland:** A thistle, slipped and leaved proper, and ensigned with the imperial crown. **For Ireland:** A harp, or stringed argent, and a trefoil vert, both ensigned with the imperial crown. **For Wales:** Upon a mount vert, a dragon passant, with wings expanded and endorsed, gules. (Gloss. of Heraldry.) Formerly those who possessed badges had them embroidered on the sleeves of their servants and retainers [RETAINERS], and even yet the practice is not extinct.

The history of the changes which badges have undergone is interesting. In the time of Henry IV. the terms *livery* and *badge* seem to have been synonymous. [LIVERY.] A badge consisted of the master's device, crest, or arms on a separate piece of cloth, or sometimes on silver in the form of a shield, fastened to the left sleeve. In Queen Elizabeth's reign the nobility placed silver badges on their servants. The sleeve badge was left off in the reign of James I., but its remains are still preserved in the dresses of porters, firemen, and water-men, and possibly in the shoulder-knots of footmen. During the period when badges were worn the coat to which they were affixed was, as a rule, blue, and the blue coat and badge still may be seen on parish and hospital boys. (Douce: *Illustrations of Shakespeare*, 1839, pp. 205-7.)

bādge, v. t. [From the substantive.] To invest with, or designate by, a badge; to blotch, to daub.

"Their hands and faces were all badg'd with blood;
So were their daggers." Shakesp: *Macbeth*, ii. 3.

bādge-lēss, a. [Eng. *badge*; -less.] Destitute of a badge.

"While his light heels their fearful flight can take,
To get some badgeless blue upon his back."

Bp. Hall: *Sat.*, iv. 5.

bād-gēr, bād-gēard, *bāg-ēard, s. [Fr. *blai-reau*=a badger; O. Fr. *bladier*=a corn dealer, Low Lat. *bladarellus*=a little corn-dealer; *bladarius*, *bladerius*=a corn-dealer, a badger, from *bladum*, *bladus*, *blada*=corn, which the badger was evidently believed to carry away.]

Badge of Arthur,
Prince of Wales.
(1500.)

*A. Of persons: A person who bought corn or other provisions in one place and carried them to another, with the view of making profit on the transaction. [BADGERING.]

"Some exemption ought not to extend to badgers, or those who carry on a trade of buying of corn or grain, selling it again without manufacturing, or of other goods unmanufactured to sell the same again."—*Nicolson and Burn: Hist. of Cumberland*, p. 312.

B. Of animals (believed to carry off corn in the same manner as the persons now described).

I. Ordinary Language:

1. A mammalian animal found in America and Europe. It stands intermediate between the weasels and the bears, and was called by Linnæus *Ursus meles*, but is termed by modern naturalists *Meles vulgaris*. [MELES.] It is a nocturnal and hibernating animal, with powerful claws, which enable it to burrow in the ground. It feeds chiefly on roots. It can bite fiercely when brought to bay. It is of a light color above, and dark beneath. It secretes an oily matter of a very offensive odor. Country people speak of a dog and a hog badger, but they are not distinct even as varieties.

"That a brock, or badger, hath legs of one side shorter than the other, is received not only by theorists and inexperienced believers, but most who behold them daily."—*Browne*.

2. The English designation of the genus *Meles*, which contains one or two other species.

II. Technically:

1. *Her.* The badger is often introduced in heraldic blazonry: it is sometimes called a "brock" (see example under B., I. 1), and sometimes a gray. (*Gloss. of Her.*)

2. *The Badger of Scripture*, Heb. *tachhash*, has not been identified with certainty. The Septuagint translators render the Heb. *tachhash*, not by a substantive, but by the adjective *huakinthina*=hyacinthine, hyacinth-colored: as, however, the word is at times used in the plural, it cannot be an adjective. It is probably an animal, but which is far from determined. Gesenius thinks it the seal or badger itself; the Talmud an animal like a weasel or marten; Col. Hamilton Smith a kind of antelope, such as the tachmotze, tacasse, or pacasse of Eastern Africa. Other opinions make it a dolphin or a sea-cow, or a dugong, or a halicore, or a kind of hyæna. Such diversities of opinion make darkness visible instead of removing it.

"And thou shalt make a covering for the tent of ram's skins dyed red, and a covering above of badgers' skins."—*Exodus* xxvi. 14.

It is called Star Anise, or Chinese Anise. The designation *star* refers to the fact that the fruit is stellate in shape, and it is designated *anise* from its possessing a pungent aromatic flavor and smell, like that of anise. Synon.*)

Or e'er his hoof had press'd the crumbling verge,
Baffled his rider, saved against his will."

2. To struggle ineffectually against, as when a ship is said to baffle ineffectually with the winds.

¶ (a) Wedgwood believes that there are two distinct verbs spelled *baffle*, which have been confounded together. Under the one he would place the signification given above as No. 1, viz., to degrade, to insult. The second and third significations of the transitive verb, and that ranked under the intransitive one, he would relegate to his second verb, of which the primary form was intransitive, signifying to act in an ineffective manner, and transitively to cause one to act in such a way. This second verb he connects with the Swiss *baffeln*=to chatter, to talk idly. (*Wedgwood: Dict. Eng. Etym.*, 2d ed., p. 39.)

¶ (b) Crabb thus distinguishes between the verbs to baffle, to defeat, to disconcert, and to confound: "When applied to the derangement of the mind or rational faculties, *baffle* and *defeat* respect the powers of argument, *disconcert* and *confound* the thoughts and feelings. *Baffle* expresses less than

fāte, fāt, fāre, amidst, whāt, fāll, father: wē, wēt, hēre, camēl, hēr, thēre; pine, pīt, sīre, sīr, marīne; gō, pōt, or, wōre, wōlf, wōrk, whō, sōn; mūte, cūb, cūre, unite, cūr, rūle, fūll; trŷ, Sŷrian. æ, œ = ē; ey = ā. qu = kw.

defeat; disconcert less than confound. A person is *baffled* in argument who is for the time discomposed and silenced by the superior address of his opponent; he is *defeated* in argument if his opponent has altogether the advantage of him in strength of reasoning and justness of sentiment. A person is *disconcerted* who loses his presence of mind for a moment, or has his feelings any way discomposed; he is *confounded* when the powers of thought and consciousness become torpid or vanish. "When applied to the derangement of plans, *baffle* expresses less than *defeat*; *defeat* less than *confound*; and *disconcert* less than all. Obstinacy, perseverance, skill, or art *baffles*; force or violence *defeats*; awkward circumstances *disconcert*; the visitation of God *confounds*. When wicked men strive to obtain their ends, it is a happy thing when their adversaries have sufficient skill and address to *baffle* all their arts, and sufficient power to *defeat* all their projects; but sometimes when our best endeavors fail in our own behalf, the devices of men are *confounded* by the interposition of Heaven." (*Crabb: Eng. Synon.*)

"The next clause ordains that at any time after the commencement of the Act her Majesty's Treasury may, with the concurrence of the Lord Chancellor and the Master of the Rolls, abolish the office of *Clerk of the Petty Bag*, 'notwithstanding that there is no vacancy in the office.' . . . The oddest part of the affair is that it has been universally supposed, at least by laymen, that *Petty Bag* was 'abolished' some years ago. His name is certainly not to be found in the list of officers of the Chancery given in the *Solicitor's Diary and Almanack* for the current year . . . There were once three *Clerks of the Petty Bag*. Blackstone considers that the idea in *bail* is that of the Fr. *bailleur* = to deliver, because the defendant is bailed or delivered to his sureties. Wedgwood shows that the word *bajulus* in mediæval times became = the bearer of a child, a nurse, and then a tutor, a guardian. Hence, one bailing another was assumed by a legal fiction to be his guardian, who could produce him at will.]

A. *Transitive*:

1. *Ordinary Language*:

*1. To deliver, to set free; to release, to rescue.

"Ne none there was to reskue her, ne none to *baille*."

B. *Law*:

1. *Of persons*: Those who stand security for the appearance of an accused person at the fitting time to take his trial. The word is a collective one, and not used in the plural. 2. Pecuniary security given by responsible persons that an individual charged with an offense against the law will, if temporarily released, surrender when required to take his trial.

"The trial of Keso for this new charge is postponed, and he is admitted to bail."—*Lewis: Early Rom. Hist.*, ch. xii., pt. iii., § 37.

¶ Several kinds of bail either exist or did so formerly at common law. An important one, of which much use was once made, was that called *Common Bail*, or *Bail below*. The old practice being to arrest persons who now would only be summoned, an excuse was required for again letting those go against whom the charge was trivial. So, with all gravity, there were accepted as their securities John Doe and Richard Roe, two mythic personages whom no one had ever seen in the flesh, and who were known to be utterly unproducible if the friend for whose appearance they became responsible thought fit to *drum*. If the charge was a more serious one, *Special Bail*, called also *Bail above*, was requisite; it was that of substantial men, and in this case no shadowy personages would do. Modern legislation has so altered the form of process that Messrs. Doe and Roe's services are no longer required.

bāl'-aņce, *bāl'-lāņce, s. [In Dut. *balans*; Ger. (in Mech.) *†balance*; Fr. *balance*; Prov. *balans*, *balanza*; Sp. *balanza*; Ital. *bilancia*; Lat. *bilanx*=having two scales: *bi* (in compos. only)=two, and *lanx*=(1) a plate, platter, dish, and specially (2) the scale of a balance. Compare also Low Lat. *ballancia*, *valentia*=price or value. (See *Ducange*.)]

A. Ordinary Language:

I. An instrument for weighing.

1. Lit.: That which has two scales; viz., the instrument described under B. I. 1, for weighing bodies. It is called "a balance," "a pair of balances," or, more rarely, "balances."

"A just weight and balance are the Lord's: all the weights of the bag are His work."—Prov. xvi. 11.

"... had a pair of balances in his hand."—Rev. vi. 5.

"Just balances, just weights, a just ephah, and a just hin, shall ye have . . ."—Lev. xix. 36.

2. Figuratively:

(a) What may be called mental scales; those powers or faculties which enable one to estimate the relative weight, advantage, or importance of two things, neither of which can be cast into material scales.

(b) The emblem of justice, often figured as a bandaged person holding in equilibrio a pair of scales.

To sway the balance: To administer justice.

"Discernment, eloquence, and grace,

Proclaim him born to sway

The balance in the highest place,

And bear the palm away."

Cowper: *Promotion of Thurlow*.

II. The state of being in equipoise.

1. Lit.: The equipoise between an article and the weight in the opposite scale; or any similar equipoise without actual scales being used.

"And hung a bottle on each side,

To make his balance true."

Cowper: *John Gilpin*.

"I found it very difficult to keep my balance."—Darwin: *Voyage round the World*, ch. xvii.

2. Figuratively:

(a) The act of mentally comparing two things which cannot be weighed in a material balance.

"Upon a fair balance of the advantages on either side, it will appear that the rules of the gospel are more powerful means of conviction than such message."—Atterbury.

(b) Mental or moral equipoise or equilibrium; good sense, steadiness, discretion.

"... the English workmen completely lose their balance."—J. S. Mill: *Polit. Econ.*, vol. i., bk. i., ch. vii. (Note).

III. That which is needful to be added to one side or other to constitute an equilibrium; also the preponderance one way or other before such adjustment is made.

1. Lit.: Used in connection with the weighing of articles or the making up of accounts. [B.]

2. Fig.: Used in the estimating of things immaterial which cannot be literally weighed or calculated.

"... the balance of hardship turns the other way."—J. S. Mill: *Polit. Econ.*, vol. i., bk. ii., ch. ii., § 2.

B. Technically:

1. Mechanics, &c.:

1. Common balance: An instrument for determining the relative weights or masses of bodies. It consists of a beam with its fulcrum in the middle, and its arms precisely equal. From the extremities of the arms are suspended two scales, the one to receive the object to be weighed, and the other the counterpoise. The fulcrum consists of a steel prism, called the *knife-edge*, which passes through the beam, and rests, with its sharp edge or axis of suspension, upon two supports of agate or polished steel. A needle or pointer is fixed to the beam, and oscillates with it in front of a graduated arc. It points to zero when the balance is at rest. When the beam is horizontal, the center of gravity of the instrument should be in the same vertical line with the edge of the fulcrum, but a little beneath the latter. A good balance possesses both sensibility and stability. A balance is said to be sensible which so easily revolves upon its fulcrum that, when in equipoise, the addition of the minutest particle of matter to one scale makes it sensibly move. It is stable when, owing to the low position of the center of gravity, it does not long oscillate on being disturbed. This first type of balance may be modified in various ways.

(a) A false balance of this type is one in which the arms are unequal in length, the longer one being on the side of the scale into which the article to be weighed is to be put. As the balance is really a lever [LEVER], it is evident that a smaller weight than that in the scale will put the beam into equilibrium. The fraud may at once be detected by putting the article to be weighed into the scale containing the weight, and *vice versa*.

(b) Hydrostatic balance: A balance designed for the weighing of bodies in water, with the view of ascertaining their specific gravity.

2. A "Roman" balance, the same as the steel-yard. [STEELYARD.] Of this type the Chinese, the Danish or Swedish, and the bent lever balances are modifications.

II. Mechanics and Natural Philosophy:

Balance of torsion: An instrument invented by Coulomb for comparing the intensities of very small forces. It consists of a metallic wire suspended vertically from a fixed point, to the lower end of which a horizontal needle is attached with a small weight designed to keep the wire stretched. The magnitude of a small force acting on the end of the needle is measured by the amount of "torsion," or twisting of the wire—in other words, by the arc which the needle passes over measured from the point of repose.

III. Mechanics and Horology:

1. Balance of a watch: The circular hoop or ring which takes the place of the bob of a pendulum in a clock. The action of the hair-spring causes it to vibrate.

"It is but supposing that all watches, while the balance beats, think; and it is sufficiently proved, that my watch thought all last night."—Locke.

2. Compensating balance of a chronometer: A balance or wheel furnished with a spiral spring, with metals of different expansibility so adjusted that, in alterations of temperature, they work against each other and render the movements of the chronometer uniform.

IV. Astron.: A constellation, one of the signs of the zodiac, generally designated by its Latin name, *Libra*. [LIBRA.]

V. Book and Account Keeping: The excess on the debtor or creditor side of an account, which requires to be met by an identical sum entered under some heading on the other side if an equilibrium is to be established between the two.

VI. Comm. and Polit. Econ. Balance of trade: Properly an equilibrium between the value of the exports from and the imports into any country, but more commonly the amount required on one side or other to constitute such an equilibrium.

"Nothing, however, can be more absurd than this whole doctrine of the balance of trade. . . . When two places trade with one another, this doctrine supposes that if the balance be even, neither of them either loses or gains; but if it leans in any degree to one side, that one of them loses and the other gains, in proportion to its declension from the exact equilibrium."—Adam Smith: *Wealth of Nations*, bk. iv., ch. iii., pt. ii.

VII. Politics. Balance of power: Such a condition of things that the power of any one state, however great, is balanced by that of the rest. To maintain such an equilibrium all the nations jealously watch each other, and if any powerful and ambitious one seek to aggrandize itself at the expense of a weaker neighbor, all the other states, parties to the system, hold themselves bound to resist its aggressions. The ancient Greek states thus combined first against Athenian and then against Spartan domination. Several of the modern European states did so yet more systematically, first against Spain, then against France, and more recently against Russia. Many of these wars have tended to the vindication of international law and the preservation and increase of human liberty; but others have been detrimental to humanity, and the "balance of power" does not now override every consideration to the extent that it did formerly. Those who advocate it have no other ambition than to maintain the "status quo," however arbitrary or obsolete.

balance-beams, s. pl. Beams constituting part of the machinery for lowering a drawbridge, and which, moving upward, cause it to descend.

"Full harshly up its groove of stone,
The balance-beams obeyed the blast,
And down the trembling drawbridge cast."

Scott: *The Bridal of Triermain*, i. 15.

balance-electrometer, s. An instrument invented by Cuthbertson for regulating the amount of the charge of electricity designed to be sent through any substance. Essentially it consists of a beam with both its arms terminating in balls. One of these is in contact with a ball beneath it, supported by a bent metallic tube, proceeding from the same stand as that on which the beam rests. When electricity is sent through the instrument, the two balls repel each other, and the beam is knocked up. Its other extremity consequently descends, the ball there coming in contact with another one at the top of an insulated column, and a discharge will there take place. The weight, overcome by the repulsive force, will measure the intensity of the latter. It has been superseded by instruments on other principles.

balance-fish, s. A name sometimes given to a shark of the genus *Zygena*. The more common appellation, however, for these fishes is *Hammer-headed sharks*.

balance-knife, s. A table-knife with a handle which so balances the blade that it is kept from coming in contact with the table.

balance-reef, v. t.

Naut.: To reduce a sail to its last reef.

balance-sheet, s. A statement showing the balance of a number of accounts.

An order of plants placed by Lindley under the class Rhizanthæ or Rhizogens, but believed by Dr. Hooker to have an affinity to the exogenous order Haloragææ, or Hippuridæ. They are succulent, fungus-like, leafless plants, usually yellow or red, parasitical upon roots. The flowers are mostly unisexual; they are crowded together in heads or cones. The perianth in the males is generally three or six cleft; the ovary has one or two styles, but only one cell and one pendulous ovule. Lindley estimated the number known in 1846 at thirty. They occur in America; at the Cape of Good Hope and in other parts of Africa; also in Asia. One species occurs in Malta. In properties they seem to be styptic. *Cynomorium coccineum*, called by apothecaries *Fungus Meliten-sis*, is so, as are some species of *Helosis*. Embrophytum is eaten in Peru as if it were a fungus. [BALANOPHORA, CYNOMORIUMS.]

From two to four valves more close the upper portion of the tube, with the exception of a slit or orifice, through which the inhabitant protrudes its cirri in quest of sustenance. Though fixed when adult, it swims about when immature, and in that state somewhat resembles an entomostracan. [ACORN-SHELL.]

Ord. Lang. & Arch.: A gallery or projecting framework of wood, iron, or stone, in front of a house, generally on a level with the lower part of the windows in one or more floors. Balconies are supported on brackets, cantilevers, rails, consoles, or pillars, and are often surrounded by iron rails or by a balustrade of stone. They are very common outside the better houses in large towns. When they are sufficiently strong the inmates of the house can use them for standing or sitting in the open air; when more feebly supported, they may be employed as form-stands for plants in flower-pots.

"The streets, the balconies, and the very housetops were crowded with gazers."—*Macaulay: Hist. Eng.*, ch. xi.

†(a) The form *balcone* occurs in Howell's *Letters* (dated 1650). (*Halliwel: Contrib. to Lexic.*) It is found also in *Holyday's Juvenal* (1618). This is probably the earliest instance.

1. Properly: A rich silk cloth erected as a canopy over a king, a saint, or other persons of distinction, to increase his dignity.

2. Eccles. Arch. A canopy, generally supported by pillars, but sometimes suspended from above, placed over an altar in a Roman Catholic Church,

Baldachino (from St. Peter's, Rome).

not so much to protect it as to impart to it additional grace and dignity. It is generally of a square form, covered with silk or other rich cloth, fringed at the margin. It is supposed to be copied from a structure called in Latin *ciborium*, and in Greek *kibōrion*, erected by the early Christians over tombs and altars. Baldachins were first introduced into the Western Church about 1130. Some baldachins are of great size. That in St. Peter's at Rome, the largest and finest known, reaches the elevation, including the cross, of 126¼ feet. On the other hand, some are small enough to be removed from their places and carried over the host in Roman Catholic processions.

*bā'ldē-lŷ, *bā'ldē-lŷche (*ch* guttural), *adv.* [BOLDLY.]

*bāld'-e-mōyne, s. [Etymology doubtful.] [BAWD-MONEY.]

bāl'-dēr-dāsh, s. [According to Malone, *balder* is from Eng. *ball*, and *dash* is also the ordinary English word, the reference being to the practice of barbers dashing their "balls" backward and forward in hot water. The example from Nashe given below is in favor of this etymology. But Joseph Hunter, writing in Boucher, suggests that *balderdash* may be from Wel. *baldardd*, *baldordd*=to babble, to prate, to talkidly; *baldarddus*=prating, babbling, talking idly. With this view Wedgwood agrees, and adds Teutonic and other affinities. In Gael. *ballartaich*, *ballardaich* is = a loud noise, shouting; Sw. *buller*=noise, clamor, bustle; Dan. *bulder*=noise, rumbling noise, bustle, brawl; Dut. *buldering*=blustering.] [See the verb.]

I. Lit.: Mixed, trashy, and worthless liquor.

¶ *Ballad* and *ballet* were originally the same word; afterward they became specialized in meaning—*ballet* being applied to a dance, and *ballad* to a literary or musical composition.

A. Ordinary Language:

1. Originally: Any composition in verse, or even in measured lines. Such a production might be serious, or even religious. Thus in Coverdale's Bible Solomon's Song is called "Salomon's Ballettes," and in Cranmer's and the Bishops' Bibles "The Ballet of Ballets." Harding also calls his Chronicle a "Balade." (*Boucher*.)

2. Next: A poem in spirited style, in most cases celebrating some heroic exploits. It was a much briefer and less elaborate composition than an epic. Ballads of this type have existed in nearly all countries. They have been used with great effect to perpetuate and increase the martial spirit, besides furnishing a tolerably authentic narrative of important occurrences ere history of the ordinary kind had arisen. Before the revival of letters had directed attention to the great classic models of epic poetry, native ballads were highly appreciated, even by persons of rank and culture, and the bard was a welcome guest at their social entertainments. This state of things was in full force between the eleventh and thirteenth centuries, during which period the ballad, though still mainly occupied in celebrating heroic exploits, began to embrace a wider range of subjects. [**BARD**.]

"A great part of their history is to be learned often from their ballads."—*Macaulay: Hist. Eng., ch. iii.*

"I know a very wise man that believed that if a man were permitted to make all the ballads, he need not care who should make the laws of a nation."—*Fletcher of Salton: Letter to the Marquis of Montrose*.

3. Now: A short sentimental poem.

B. Music:

1. A short simple air repeated in two or more stanzas, with an accompaniment of a strictly subordinate character. A more elaborate composition, of an analogous kind is called a song or canzonet.

2. A piece of concerted vocal music of the *madrigal* class, perhaps originally of a dance-like rhythm, and generally having a short "burden" such as *fa, la, &c.*

3. A term used by Bach and other writers to designate one of a "suite de pièces."

bāl'-last, ***bāl'-ast**, *s.* [In Sw., Dut., Ger., & Russ. *ballast*; Dan. *baglast*; apparently from *bag*=the back, behind, and *last*=burden, charge, load, weight; Sw. *last*=load, cartload; Icel. *hlass*; A. S. *hlæst*=a burden, loading, the loading of a ship, freight, merchandise; O. Fries. *hlest*; O. H. Ger. *hlast*; Dut. & Ger. *last*; Fr. *balast*, *lest*=ballast, lastage, cargo; Sp. *lastre*=ballast; Port. *lastro*. The second half of the word seems plain. The import of the first half appears suggested by the Dutch word *bag*=back. Wedgwood believes the metaphor to be that of a ship coming back in ballast when it is unable to obtain cargo. Webster and Mahn give as an alternative view Celt. *beal*=sand, and suggest comparison with Wel. *balasarn*=ballast. Or the substantive may be from the verb *to ballast*, and it again from A. S. *behlæstan*=to load a ship.] [BALLAST, *v. t.*, LASTAGE.]

Dramatic Art: A dramatic representation, consisting of dancing and pantomime, regulated by the strains of music, and generally attended by the subordinate accessories of scenery and decoration. It was first introduced by the Greeks, was copied and developed by the Romans, and was revived in more modern times by the Italians, whose example diffused it over most civilized countries. Our own nation received it from the French. Till the decline of the Roman empire the performers were men, then women were introduced, and have since been the chief actors in the ballet. The bad taste of the play-going public has always tended to drag down the ballet to the low level of a mere exhibition of gymnastic skill in dancing, whereas its original and specific aim was to act by gesture instead of words a drama illustrative of the life, manners, and costumes of foreign nations.

"The title of *ballet* was [also] often applied to poems of considerable length."—Warton: *Hist. of Eng. Poetry*, iii. 423.

ballistic chronometer, *s.* An apparatus for measuring the speed of a projectile at several successive intervals from the muzzle of the gun, and thus determining its variation of velocity.

ballistic curve, *s.* The path actually traveled by a projectile, as distinguished from its theoretical or parabolic path.

ballistic pendulum, *s.* A machine invented by Mr. Benjamin Robins for ascertaining the force of projectiles. It consists of a large block of wood affixed to the end of a strong iron stem, having at the other end a cross steel axis, placed horizontally, about which the whole vibrates together like the pendulum of a clock. When a projectile is dis-

charged against the wooden block or ball, the pendulum is set in motion, and the arc through which it vibrates measures the force with which the machine has been struck.

bāl'-lîş'-tics, *s.* [In Ger. *ballistik*; Fr. *balistique*; Port. *balística*.] The art, or the principle underlying the art, of shooting missiles by means of a ballista. 2. The science of projectiles.

A. Ordinary Language:

I. *Originally*:

*1. A large as contradistinguished from a small ball; *baloon*, as mentioned in the etymology, being the augmentative of *ball*. *Spec.*, the large ball called by Minshew a "wind ball," used in the game defined under No. 2.

"Like balloones full of wind, the more they are pressed down, the higher they rise."—Hewyt: *Sermons* (1658), p. 115.

¶ Todd thinks that the foregoing example suggests the existence of a machine for traversing the atmosphere as early as 1658. But may it not refer to a ball pressed against the ground, and again elastically springing up?

2. A kind of game somewhat resembling tennis, played in a field with a large ball of leather inflated with air, and driven to and fro with the arm.

"Foot-ball, balloon, quittance, &c., which are the common recreations of the country folks."—Burton: *Anat. of Mel.*, p. 266.

II. *Subsequently*:

1. *Gen.*: Anything large and spherical, or nearly so, especially if at the same time it is hollow. [B.]

2. *Spec.*: The machine for aerial navigation described under B. 4.

B. Technically:

*1. *Old Chem.*: A large spherical receiver with a short neck, used in distillation.

2. *Arch.*: A ball or globe placed on the top of a pillar. (Johnson.)

3. *Pyrotech.*: A ball of pasteboard, stuffed with combustible matter, which, when fired, mounts to a considerable height in the air, and then bursts into bright sparks of fire resembling stars.

4. *Aeronautics*: A machine designed for aerial navigation. The sight of soap-bubbles rising into the air, and of the flight of birds, must have made men in all ages give at least an occasional stray thought to the subject of aerial navigation; but the first deliberately considered scheme recorded seems to have been that of Francis Lana, a Jesuit, who, in 1670, proposed to raise a vessel into the atmosphere by means of four metallic globes, having a vacuum inside. The scheme, if tried, would have failed; the globes of metal, if intensely thin, would have been crushed in a moment by the surrounding air; while if made thick enough to resist the pressure, they would have been far too heavy to rise. The only type of balloon which as yet has succeeded was invented early in 1772, by the brothers Stephen and Joseph Montgolfier, paper-makers of Annonay, near Lyons, who publicly exhibited at Annonay the first balloon ascent ever witnessed, on June 5, 1783. Their balloon was filled with air rarefied by a fire lighted in the car. In December of the same year, M. Charles, Professor of Physics in Paris, substituted hydrogen gas for rarefied atmospheric air. On November 21, 1783, the Marquis d'Arlandes and M. Pilatre ascended 3,000 feet or more in a balloon, and, passing over Paris, descended again in safety. Since then many daring aeronautic feats have been successfully achieved, while some fatal accidents have occurred. M. Blanchard, ascending from Paris on March 2, 1784, was the first to carry up with him a parachute to aid him in his descent if a catastrophe occurred. On November 25, 1783, the first English balloon was sent up from London, with no person in the car; on September 15, 1784, Vincentio Luuardi ascended from London; on January 7, 1785, M. Blanchard and Dr. Jeffries crossed the English Channel from Dover to the

forest of Guïennes; on September 21, 1802, M. Garnerin safely descended in London from a parachute.

A balloon of modern type is made of long bands of silk sowed together, and rendered air-tight by being covered with caoutchouc varnish. It is filled with hydrogen or coal gas. At the top there is a safety-valve, under the aeronaut's control. He sits in a light wicker-work boat or car, suspended by means of cords from a network covering the balloon. A balloon about forty-eight feet long by thirty-six feet broad and thick will carry three persons; with its car and accessories it weighs about 300 pounds.

Captive Balloon: A balloon fixed by a rope or chain to the ground so that it is not free to ascend beyond a certain height.

Dirigible Balloon: A balloon that can be steered. Recently several aeronauts have made successful attempts with dirigible balloons. On July 12, 1901, and again on October 19 of the same year, Santos-Dumont, at Paris, France, rose with a dirigible balloon from a park in St. Cloud, sailed completely round the top of the Eiffel tower, and returned safely to the spot from which he started. On February 10, and again on February 12, 1902, M. Santos-Dumont rose with his balloon from the beach at Monaco, and directed his course across the bay, and far out over the Mediterranean, in the face of adverse winds, made a graceful circle, and returned to the place of starting. His balloon was of cylindrical form, pointed at the ends, and was driven by a petroleum motor.

Fire Balloon: A balloon constructed of paper or some light material, which, at pyrotechnic displays, is sent up into the air, carrying a fire or light instead of an aeronaut. This display forms a very popular element of Fourth of July celebrations.

bal-lōon'-īng, s. [Eng. *balloon*; -*ing*.] The art of constructing balloons, or of using them for the purpose of aerial navigation.

"Since then the art of ballooning has been greatly extended, and many ascents have been made."—*Atkinson: Ganot's Physics*, 3d ed. (1868), p. 134.

Military Ballooning: The art of using balloons for military purposes. Sometimes captive balloons have been employed to reconnoiter the enemy in war; and on Friday, October 7, 1870, during the investment of Paris by the Germans, the celebrated French deputy, Gambetta, escaped from the beleaguered capital in a balloon, and used his freedom to organize a large relieving army in the provinces, with the intention, not ultimately realized, of compelling the Germans to raise the siege.

bal-lōon'-ist, s. [Eng. *balloon*; -*ist*.] A person who constructs or who steers a balloon, or ascends in one from the earth; an aeronaut.

bal-lōon'-rŷ, s. [Eng. *balloon*; -*ry*.] The art or practice of ascending in a balloon; aeronautics.

bal-lōt, s. [Fr. *ballote*=a ballot, a voting-ball, a panner, a basket; Sp. *balota*; Port. *balote*; Ital. *ballotta*=a little ball, dimin. of *balla*=a ball. Thus, in one sense, *ballotta* (a little ball) is the opposite of *balloon*, which properly means a great one.]

1. A ball used for the purpose of voting. In casting a ball for or against an individual, the arrangement sometimes is that if the vote be designed in his favor, then a white ball is used; but if it be intended to be against him, then one of a black color is employed—whence the phrase "to *blackball* one." Other methods, however, may be adopted: thus, a ball of any color put through a hole into one drawer may indicate a favorable vote, and into another an unfavorable one. Used in this sense, *literally*, for such a ball as that described, or *figuratively*, for anything, even though not a ball, employed in secret voting.

2. The method of voting in a secret manner, by means of balls of different colors, or put into different compartments, or in any other way; secretas opposed to open voting. Admission into scientific societies, clubs, the direction of banks and other large commercial establishments, has long been conducted by ballot. In ancient Athens and the other Greek states, it was in use when votes had to be taken on political questions. It has long been established in this country, and for a shorter period in France. In England it constituted one of the five points in the Chartist programme, both of the great political parties in the state being at first opposed to it, as deeming it a revolutionary project. Gradually, however, the mass of the Liberal party ceased to fear the ballot, and opposition to it on the part of the Conservatives became less pronounced, till at last, while Mr. Gladstone was in the plenitude of his power, a bill, legalizing it as an experiment for eight years, was passed during the session of 1872. Its merits are that it constitutes a considerable barrier in the way both of intimidation and bribery, and thus encourages the voter to express his real sentiments, besides making elections much less likely to result in riot than when the old system prevailed.

ballot-box, s. A box for the reception of ballot-balls or papers when a secret vote is being taken.

It differs from a capriole, for when a horse works at caprioles he jerks out the hinder legs with all his force, whereas he abstains from jerking them out when he makes a ballotade.

Of happy shrubs in Idumean plains." *Dryden*.

2. *Balm of Acouchi:* The gum of the *Icica acuchini*, a plant of the order Burseraceæ. [ICICA.]

3. *Balm of Gilead:*

(1) *Scripture:* The gum of a tree and the tree itself, the latter growing, as its name suggests, in Gilead, a region east of Jordan, belonging chiefly to the tribe of Gad. It is called *tsēri* in Heb., and *rhētīnē* in Septuagint Greek. It was used for healing wounds. (For reference to it see Gen. xxxvii. 25; xliii. 11; Jer. viii. 22; xlv. 11; Ezek. xxvii. 17.) It has not been satisfactorily identified by modern botanists. Royle thinks it may possibly have been the *Elæagnus angustifolius* of Linnæus. [See (2) a.]

(2) *Botany:*

(a) A tree, *Balsamodendron Gileadense*, the specific name being given because it was once supposed to be the Scripture "Balm of Gilead"—an opinion probably erroneous, for it does not at present grow in Gilead, either wild or in gardens, nor has it been satisfactorily proved that it ever did. [(1) *Scripture*.] It is called also *B. opobalsamum*. It is a shrub or small-spreading spineless tree, ten or twelve feet high, with trifoliate leaves in fascicles of 2-6, and reddish flowers having four petals. It is found south of 22° N. lat. on both sides of the Red Sea, in Arabia, Abyssinia, and Nubia. It does not occur in Palestine. (*Dr. Trimen, &c.*)

(b) *Its gum:* This is obtained from the trees by incision. It is called also Balm of Mecca and Opobalsamum. Two other kinds of gum are obtained from the same tree: the first (*Xylobalsamum*) by boiling the branches and skimming off the resin, which rises to the surface of the water; and the second (*Carpobalsamum*) by pressure upon the fruit.

Balm of Gilead Fir: A tree (*Abies balsamea*), which furnishes a turpentine-like gum. It is a North American fir, having no geographical connection with Gilead.

B. As adjective: Pertaining to Baltimore; found at Baltimore.

Baltimore bird, Baltimore oriole, Baltimore hang-nest, baltimore. A bird of the family Sturnidæ (Starlings), and the sub-family Oriolinæ.

(Orioles). It is the *Oriolus Baltimore* of Catesby, now *Icterus Baltimorei*. The name Baltimore was applied or attached to this bird not merely because it occurs at the place so called, but according to Catesby because its colors, which are black and orange, were the same as those on the coat of arms or livery of the Lord Baltimore who was formerly proprietor of Maryland. (See etym.) The appellation "Hang Nest," or sometimes "Hanging Bird," is given because it builds a pendulous nest—that is, like a cylindrical pouch, sometimes sewed with horse hair; the curious structure being suspended from the end of a branch or a twig. Another name given to the Baltimore is "Fire Bird," because when its bright hue is seen through the green leaves the appearance somewhat resembles a flame of fire. Yet another name is "Golden Robin." It extends from Canada to Mexico, or even to Brazil, migrating to the northern part of this area about May, and to the southern one about the end of August or in September. (*Wilson and Bonaparte, &c.*)

A. As substantive: Any species of the botanical genus *Bambusa*, and specially the best-known one, *Bambusa arundinacea*. [BAMBUA.] It is a giant-grass, sometimes reaching the height of forty or more feet, which is found everywhere in the tropics of the Eastern Hemisphere, and has been introduced into the West Indies, the Southern States of America, and various other regions of the Western world. It has the usual characteristics of a grass—the cylindrical stem, of flinty hardness externally, while soft or even hollow within; the separation of the stem into nodes and internodes; and the inflorescence of a type found in many genera of the order, namely, in great panicles made up of a series of spikes of flowers. In some cases a substance called *tabasheer* [TABASHEER], consisting of pure silica, is found secreted in the nodes.

The uses to which the several species of bamboos are put in the regions where they grow are almost innumerable. In housebuilding they furnish the framework of the sides and roof, with the joists and other parts of the flooring. Villages of such materials are in many cases rendered very difficult of attack by being surrounded by a thick fence of spiny species. Bows, arrows, quivers, the shafts of lances, and other warlike weapons can be made from the stems of bamboo, as can ladders, rustic bridges, the masts of vessels, walking-sticks, water-pipes, flutes, and many other objects. The leaves are everywhere used for weaving and for packing purposes. Finally, the seeds are eaten by the poorer classes in parts of India; and in the West Indies the tops of the tender shoots are pickled and made to supply the place of asparagus.

băn (2), s. [Servian *ban*; Russ. & Pol. *pan*=a master, a lord.]

In Austro-Hungary:

1. *Formerly:* A title belonging to the warden of the eastern marshes of Hungary.

2. *Now:* The Viceroy of Temesvar, generally called the "Ban of Croatia." The territory he rules over is called a *banat* or *banate.*

¶ The name *Ban* in this latter sense was brought prominently before the English public during the war of independence waged by the Magyars of Hungary against Austria in 1849. In that struggle the Slavonians, who constituted nearly half the population of the Austrian empire, sided with the Germans against the Magyars, one of the most prominent supporters of the Vienna Government being the "Ban Jellachich" of Croatia. His name impressed the English public with a certain measure of awe, for people had but vague conceptions as to what a "Ban" might mean, and none but the most audacious ventured to pronounce the word "Jellachich."

bā-na'-nā, s. & a. [In Sw. *bananasträd*; Fr. *banane*, the fruit, and *bananier*, the tree; Sp. *banana*, *banano*, *bananas*; Port. *banana*.]

A. As substantive:

1. A tree, the *Musa sapientum* of botanists. To the superficial observer it looks like a palm, but the leaves are essentially different. Tearing in long strips, like those of endogens in general, they differ from the normal type in doing so transversely on either side from the midrib, instead of longitudinally. The flowers also are different, and the nearest affinity of the order Musaceæ, of which it or its congener, the plantain, is the type, is with the gingers and arrowroots, and not with the palms. The *banana* is about twenty feet high. It resembles the plantain so closely that some think it a mere variety of that species; but it differs in having the stalk marked with dark-purple stripes and spots, and possessing a shorter, more rounded, and more luscious fruit. Originally from the Eastern Hemisphere, but now cultivated largely in Florida and Louisiana.

2. The fruit of the banana-tree. It grows in clusters of long, angular, finger-like fruits, some inches in length. When the rind, which easily comes away, is stripped off, there is found beneath it a soft pulp like that of a fine pear, but more luscious. It and its congener the plantain are, in the writer's opinion, the finest of all tropical fruits.

"The dream is past; and thou hast found again
Thy cocoas and *bananas*, palms and yams,
And homestead thatched with leaves."

Cowper: Task, bk. i.

B. *As adjective:* Pertaining to the banana; feeding on the banana. (See the compounds.)

It has some affinity to the Baltimore Bird (q. v.).

A *company* marks an association for convenience, without any particular obligation, as a *company* of travelers, a *company* of strolling players. *Crew* marks an association collected together by some external power, or by coincidence of plan and motive; in the former case it is used for a ship's *crew*; in the latter and bad sense it is employed for any number of evil-minded persons met together, from different quarters, and co-operating for some bad purpose. *Gang* is always used in a bad sense for an association of thieves, murderers, and depredators in general. ¶ As robbers generally find that they can more easily carry out their nefarious plans if they go in gangs, the word *bandit* often occurs in the plural (*banditti*); there is, however, no reason to believe that this is etymologically connected with *band*, in the sense of a company of people associated together for some end.

Cowper: The Task, bk. ii.

¶ Crabb thus distinguishes between the verbs to *banish*, to *exile*, and to *expel*, and between the corresponding nouns *banishment*, *exile*, and *expulsion*. The idea of exclusion, or coercive removal from a place, is common to these terms.

(a) To *banish* and to *exile* are thus discriminated: *Banishment* includes the removal from or the prohibition of access to some place; *exile* signifies the removal from one's home; to *exile*, therefore, is to *banish*, but to *banish* is not always to *exile*. *Banishment* follows from a decree of justice; *exile* either by the necessity of circumstances or an order of authority. *Banishment* is a disgraceful punishment inflicted by tribunals upon delinquents; *exile* is a disgrace incurred without dishonor; *exile* removes us from our country; *banishment* drives us from it ignominiously. *Banishment* is a compulsory exercise of power which must be submitted to; *exile* is a state into which we may go voluntarily.

(b) The following is the distinction between to *banish* and to *expel*: *Banishment* and *expulsion* both mark a disgraceful and coercive exclusion, but *banishment* is authoritative; it is a public act of government; *expulsion* is simply coercive; it is the act of a private individual, or a small community. *Banishment* always supposes a removal to a distant spot, to another land; *expulsion* never reaches beyond a particular house or society—e. g., a university or public school, &c. *Banishment* and *expulsion* are likewise used in a figurative sense, although *exile* is not: in this sense, *banishment* marks a distant and entire removal; *expulsion* a violent removal: we *banish* that which it is not prudent to retain—e. g., groundless hopes, fears, &c.; we *expel* that which is noxious—e. g., envy, hatred, and every evil passion should be *expelled* from the mind as disturbers of its peace.

C. As substantive:

1. *Engineering*: The act or operation of raising a bank against river-floods, the encroachments of the sea, or for other purposes.

2. *Comm. and Polit. Econ.*: The act or operation of dealing in money; the occupation or business of a banker; the methods he adopts in carrying on this occupation; and the general principles on which these methods are founded.

Though banking cannot have been much required, and in all likelihood did not arise till society had made considerable advances, yet its origin goes back to a remote period of antiquity. The practice of taking interest for money, which presupposes operations which, by whatever name called, are really banking, is alluded to in the Mosaic law (*Exod.* xxii. 25; *Lev.* xxv. 35-37; *Deut.* xxiii. 19, 20), as it was in the New Testament by the Divine Teacher in one of His parables (*Matt.* xxv. 27). The highly interesting discovery has been made that there was a banking establishment in ancient Babylon, founded by a man called Egibi, which lasted at least from the first year of Nebuchadnezzar II. (B. C. 604) to the end of the reign of Darius Hystaspis (B. C. 485), and conducted financial operations of a magnitude which would have done no discredit to the Bank of England or the National Banks of the United States.

Banking was well understood at Athens; it was established also in the capital and the provincial parts of the Roman empire, though not just on the scale of magnitude which might have been expected.

It languished through the Middle Ages, but revived with commerce in general about the middle of the twelfth century, Italy in this as in many other respects leading the way. Hence, as shown in the etymology, the English word *bank* comes from the Italian *banco*, which primarily means a bench, and points to the fact that the first bankers, while conducting their business, sat upon a bench, as the Hindoo money-changers do to this day. From Italy the revival of banking spread to other civilized countries. Omitting banks of lesser note, that of Venice—the first public bank established in mediæval times—arose in 1157, that of Genoa in 1345, that of Barcelona about 1400, that of Amsterdam in 1669, and that of Hamburg in 1619. In 1694 the celebrated William Patterson founded the world-renowned Bank of England, its charter being dated July 27th of that year. The Bank of Scotland followed in 1695. In 1703 arose the Bank of Vienna, in 1765 that of Berlin, and in 1783 that of Ireland. The Bank of France was instituted in 1803, and that of Bengal in 1809. The Bank of

the United States went into operation in 1791, with a capital of \$10,000,000. It was revived several times only to cease to exist in 1836.

National Banks, as they are now, were organized in 1864. They are banks of deposit, discount and circulation. They enjoy peculiar advantages, having in addition to the profits of discounting, the interest on the bonds deposited with the Treasury Department to secure their circulation, and the use of their circulation itself.

State Banks are banks of deposit and discount only, and their business and standing depends mainly upon local causes and the individuals who manage them.

Savings Banks are banks of deposit, only allowing interest on all sums left with them for a certain length of time.

The first notable traders in money in England were the Jews; then followed, from about the middle of the thirteenth century, Italians from Lombardy and other parts of Italy, whence the name Lombard street for a well-known thoroughfare in London still swarming with bankers. The goldsmiths combined with their more specific avocation, first the exchange of coins, next the borrowing and lending of money, and finally banking of the more modern type came gradually into existence about the middle of the seventeenth century.

The object of all bankers is to trade in money. This may be done with capital which, in the strictest sense, is their own; or it may be so that, while employing this, they may invite deposits and current accounts from the public, thus keeping money in safe custody, of which the owner might be robbed if he retained it in his own possession, and making payments for him more safely and conveniently than he could do himself. The last-mentioned operation is generally carried out by means of bills or checks. The establishments now described are banks of deposit and of discount. To these functions some add that of being banks of issue, *i. e.*, a bank which issues notes.

The Bank of England stands in a category by itself. It is ruled by a Governor, Deputy-Governor, and twenty-four directors. Its original capital of £1,200,000 was increased by successive subscriptions till in 1816 it reached £14,553,000. Its charter has frequently been renewed. It is a bank of issue. The £5 notes, by which it is best known to the general public, were first sent forth in 1793. It has been helped by the Government, and has helped the Government in return. Though generally prosperous, it has had its vicissitudes, having had to suspend payment of its notes in 1696, and between 1797 and 1820 was restricted from making payments in gold, though a first step toward the gradual resumption of the normal system had been made in 1817. The Act by which banking is now regulated is the Bank Act of 1844, one provision of which was that the issues of the Bank of England on securities should be limited to £14,000,000. The directors of the Bank meet every Thursday, to consider and fix the rate of discount, and for other business. Till lately other banks and discount houses were wont to modify their own rate of interest by these periodical announcements, but of late some of them have acted more independently.

The Joint-stock Banks of London and the provincial parts of England. The capital of a joint-stock bank is made up of the money subscribed by its shareholders. Most of these establishments are constituted on the principle of unlimited liability, by which is meant that if the bank become insolvent, the shareholders are responsible to the last farthing they have in the world for the debts of the bank; sharing its profits in time of prosperity, they must participate in its losses in days of adversity. Nay more, a trustee who holds bank shares is responsible personally to the extent of his private property, though he could not without fraud have appropriated any profits arising from the shares placed in his name. By an Act of Parliament passed in 1879, these will be permitted on certain conditions to diminish the excessive liability of their shareholders. Most of the joint-stock banks grant interest on the deposits. None within sixty-five miles of London are allowed to be banks of issue.

Private Banks: Associations of private persons for banking purposes, not incorporated. These, as a rule, give no interest on deposits.

No further legal demands can be made against him, though, if strictly honorable, he of course feels that, morally viewed, his debts are still owing, and if at any future time he obtain the requisite resources, he is in conscience bound to liquidate them with interest from the time when his failure took place. [B. 1.] It indicates the way to be taken in marching, and is a conspicuous rallying-point in case of defeat. There are national, imperial, royal, ecclesiastical, and more private banners. A banner generally consists of a piece of taffeta or other rich cloth, with one side of it attached to a pole, while the rest of it is free to flutter in the wind. II. Technically:

Theoretically, the banner of an emperor should be six feet square, that of a king five feet, that of a duke four feet, and that of a nobleman from a marquis to a knight banneret inclusive, three feet. No one under the rank of a knight banneret is entitled to a banner. [BANNERET.] [For the different kinds of banners, see COLORS, FLAG, GONFANNON, GUIDON, ORIFLAMME, PENDANT, PENNON, and STREAMER.]

¶ A *Feudal Banner* is a square flag in which the arms of a deceased person are paneled, but with the helmet, mantle, and supporters absent. When all the quarterings of the person who is dead are present, and the edge fringed, it is called a *Great Banner*.

1. An abbreviation for Knight-Banneret; a member of an ancient order of knighthood which had the privilege of leading their retainers to battle under their own flag. They ranked as the next order below the Knights of the Garter, only a few official dignitaries intervening. This was not, however, unless they were created by the king on the field of battle, else they ranked after baronets. The order is now extinct, the last banneret created having been at the battle of Edgehill, in 1642, for his gallantry in rescuing the standard of Charles I.

"A gentleman told Henry, that Sir Richard Croftes, made banneret at Stoke, was a wise man; the king answered, he doubted not that, but marvelled how a fool could know."—*Camden.*

Fr. *baratar*=to joke.] Mildly to rally one, to make good-natured mirth at one's expense; to utter mild raillery upon one; (vulgarly) to chaff. It is quite consistent with respect and affection for the individual bantered; indeed, there is in it a tacit compliment to his temper, as it would not be ventured on were he deemed likely to take fire at the remarks made.

"The magistrate took it that he *bantered* him, and bade an officer take him into custody."—*L'Estrange*.

"If your companions at Cambridge *banter* you on your regularity, order, decency, and love of study, *banter* them in return on their want of these qualities."—*Lord Chatham*.

A. *As substantive*: A tree, the *Ficus Indica*, or Indian fig-tree, celebrated for sending down new stems from its spreading branches, which, supporting those branches themselves, make a living colonnade of great extent. Colonel Sykes mentions a banyan-tree which he saw at the village of Mhow, in the Poona Collectorate, which had sixty-eight of the descending stems just mentioned, and constituted a grove capable, when the sun was vertical, of affording shade to 20,000 men. The tree is well described by both Milton and Southey, except that Milton,

misled by Pliny, makes the leaves larger than they are in nature, and describes loopholes cut in the banyan grove, which are wholly mythic—

" . . . there soon they chose
The fig-tree, not that kind for fruit renowned,
But such as at this day, to Indians known,
In Malabar or Deccan spreads her arms,
Branching so broad and long, that in the ground
The bended twigs take root, and daughters grow
About the mother tree, a pillared shade
High over-arched, and echoing walks between;
There oft the Indian herdsman, shunning heat,
Shelters in cool, and tends his pasturing herds
At loopholes cut thro' thickest shade: those leaves
They gathered, broad as Amazonian targe."

Milton: P. L., bk. ix.

"It was a goodly sight to see

That venerable tree,
For o'er the lawn, irregularly spread,
Fifty straight columns propt its lofty head;
And many a long depending shoot,
Seeking to strike its root,
Straight like a plummet, grew toward the ground,
Some on the lower boughs which crest their way,
Fixing their bearded fibers round and round,
With many a ring and wild contortion wound;
Some to the passing wind at times, with sway,
Of gentle motion swung;
Others of younger growth, unmoved, were hung
Like stone-drops from the cavern's fretted height.
Beneath was smooth and fair to sight,
Nor weeds nor briars deformed the natural floor,
And through the leafy cope which bowed it o'er
Came gleams of chequer'd light.
So like a temple did it seem, that there
A pious heart's first impulse would be prayer."

Southey: Curse of Kehama, bk. xiii.

B. *As adjective*. Pertaining to the tree now described.

băp'-tîsm, *băp'-tîsme, *băp'-tême, *băp'-tîm, s. [In Fr. *baptême*; O. Fr. & Prov. *baptisme*; Sp. *bautismo*; Port. *baptismo*; Ital. *battesimo*; Lat. *baptisma*; Gr. *baptisma* and *baptismos*; from *baptizō*= . . . to baptize.] [BAPTIZE.]

A. Literally:

I. The act of baptizing any person or thing in or with water.

1. The act of immersing any one in water, or pouring or sprinkling it upon him or her as a religious and symbolical rite.

"*Baptym*. Baptismus, baptisma."—*Prompt. Parv*.

Two kinds of baptism by means of water are mentioned in the New Testament:

(a) "The baptism of repentance for the remission of sins," administered by John the Baptist in Jordan to those who, under the influence of his preaching, made confession of those sins.

"John did baptize in the wilderness, and preach the baptism of repentance for the remission of sins."—*Mark* i. 4. (See also *Matt.* iii. 6.)

(b) The initiatory rite of the Christian church administered first by the apostles (*John* iv. 2) while their Divine Master was on earth, and which has continued to be dispensed to the present time.

2. The act of "baptizing" a thing instead of a person with water.

¶ The washing of a ship with salt water on passing the equinoctial line was formerly called in cant and somewhat profane language "her baptism."

3. A term employed by Protestant, not by Roman Catholic, writers for the blessing of bells designed for worship in the Church of Rome. [BAPTIZE, A., I. 2.]

fâte, făt, färe, amidst, whăt, fáll, father; wê, wêt, hère, camêl, hêr, thêre; pîne, pît, sîre, sîr, marîne; gô, pôť, or, wôre, wôlf, wôrk, whô, sôn; mûte, cûb, cûre, unite, cûr, rûle, fûll; trý, Sýrian. æ, œ = ê; ey = â. qu = kw.

II. The state of being baptized.

B. Figuratively:

1. Scripture:

1. The doctrine, allegiance, or life into which the initiatory rite introduces one.

"And he said unto them, Unto what then were ye baptized? And they said, Unto John's baptism."—*Acts* xix. 3.

2. Death to sin and resurrection to newness of life.

"Therefore we are buried with him by baptism into death; that like as Christ was raised up from the dead by the glory of the Father, even so we also should walk in newness of life."—*Rom.* vi. 4.

3. Such a moral and spiritual state as warrants the answer of a good conscience toward God.

"The like figure whereunto even baptism doth also now save us (not the putting away of the filth of the flesh, but the answer of a good conscience toward God), . . ."—*1 Pet.* iii. 21.

4. Suffering, specially that of Christ.

"But I have a baptism to be baptized with; and how am I straitened till it be accomplished!"—*Luke* xii. 50.

II. General Literature:

1. The act or process of refreshing the heart by "sprinkling" it with something fitted to effect that end.

"If on the heart the freshness of the scene
Sprinkle its coolness, and from the dry dust
Of weary life a moment lave it clean
With Nature's baptism,"

Byron: Child Harold, ix. 68.

2. Initiation into any work or occupation fitted to make a change upon the character, and prevent the possibility of one's ever being again what he was before. Thus, when during the Franco-German war of 1870, Prince Louis Napoleon, the same who perished so tragically in Zululand, was first exposed, by direction of his father, Napoleon III., and with his own consent, to the fire of the enemy at Saarbrück, the event was called a "baptism of fire." So also during the Indian mutinies of 1857, the revolted sepoys, who had by murdering Europeans committed themselves to a course of action from which there was no return, were said to have undergone a "baptism of blood." In like manner the War of the Rebellion was called "A baptism of blood" necessary to the overthrow of slavery.

Formerly, the term *baptism* was also sometimes profanely applied in cant language to the outrageous practical jokes to which seamen or passengers in a vessel, who for the first time crossed the equinoctial line, were too frequently subjected, such procedure being deemed legitimate in that zero of latitude.

băp-tîș'-măl, *a.* [Eng. *baptism*; *-al*. In Fr. & Port. *baptismal*; Sp. *bautismal*; Ital. *battesimale*.] Pertaining to baptism.

"When we undertake the baptismal vow, and enter on their new life, it would be apt to discourage us."—*Hammond*.

"The baptismal service was repeatedly discussed."—*Macaulay: Hist. Eng.*, ch. xiv.

baptismal regeneration. [REGENERATION.]

băp-tîș'-măl-lîș, *adv.* [Eng. *baptismal*; *-ly*.] After the manner of baptism; through means of baptism. (*Quin.*)

Băp'-tîșt, **băp'-tîșt**, *s.* [In Ger. *Baptist*; Sp. *baptista*; Lat. *Baptista*; Gr. *Baptistēs* (*Matt.* iii. 1) = the Baptizer.] [BAPTIZE, BAPTISM.]

1. Scripture: One who extensively administers the rite of baptism. The term was and is specially applied to John, the forerunner of Jesus.

"In those days came John the Baptist, preaching in the wilderness of Judæa, . . . Then went out to him Jerusalem, and all Judæa, and all the region round about Jordan, and were baptized of him in Jordan, confessing their sins."—*Matt.* iii. 1-6.

2. *Theol., Church Hist., & Ord. Lang.*: A Christian who holds that it is not according to Scripture to baptize infants, but that the ordinance of baptism should be administered only to adult believers in Christ, and in their case not by sprinkling, or affusion, but by immersion.

Whether the early church did or did not baptize infants has been, and still is, a matter of dispute. It is universally admitted that some of the so-called heretical sects of the Middle Ages were opposed to infant baptism. At the time of the Reformation the question to whom baptism should be administered came very prominently before the church and the world, owing to the fact that a considerable number of those who, under the leadership of Luther, Melancthon, and other religious chiefs, cast off their allegiance to Rome, ultimately abandoned all belief in infant baptism. Their opponents called them Anabaptists, implying that they administered a second baptism, the first one, that dispensed in infancy, still remaining in force; while they, of course, repudiated this name, alleging that the first baptism given in infancy being invalid, that which they dispensed in adult life was the first, and not

the second. Their religious fanaticism, coupled with the extreme and dangerous political views which they adopted, brought the whole Reformation into discredit, and was one of the chief causes which operated to create the powerful reaction, of which Loyola became the leader, but which would have arisen, even if Loyola had never lived. [ANABAPTIST, JESUIT, REVOLUTION.]

The modern Baptists, quiet and law-abiding, have little in common with the German fanatics now described; moreover, they do not come from them by historical descent. The name Anabaptists is now confined, except by extreme controversialists, to the Continental fanatics of the sixteenth century, while the term Baptists is accorded to those who practice baptism by immersion of believers, not as an essential of salvation, but as "the answer of a good conscience toward God."

The Baptists of this country constitute one of the largest and most influential of our religious denominations. Their creed is a modified form of Calvinism. Their church government is purely democratic; every member having the right to vote on all important church matters. Baptism by immersion, as a confession of faith in Jesus Christ, is essential to church fellowship, and almost universally to fellowship at the celebration of the Lord's Supper. The practice of "Open Communion" has not made much headway in the United States. The principal Baptist educational institutions are the Divinity School of the University of Chicago; Rochester Theological Seminary, New York; South Baptist Theological Seminary, Louisville, Ky.; Brown University, R. I.; Bucknell University, Pa.; Colby University, Me.; Columbian University, D. C. Besides these there are numerous preparatory institutions, among the principal of which are Temple College, Philadelphia, Pa.; Mars Hill College, N. C.; Cedar Valley Seminary, Iowa; Pillsbury Academy, Owatonna, Minn.; Williamsburg Institute, Ky.

The following authentic statistics of 1902 indicate the status of this denomination:

Baptist views first attracted public notice in England in A. D. 1536, the Convocation which met in that year having denounced them as "detestable heresies utterly to be condemned." Those who upheld them were subsequently banished from the kingdom by proclamation, a few even suffered at the stake; but, as in other cases, persecution failed to uproot the system of belief which it was designed to eradicate. The first permanent Baptist congregation in England did not come into existence till A. D. 1611; the pastor was Thomas Helwys, who, jointly with John Smyth, founded the English General Baptist Church. The first Baptist congregation in Scotland was formed by the Rev. Mr. McLean in 1765.

The English Baptists were divided until recently into Baptists, General Baptists, and Strict Baptists. The latter were Calvinistic in teaching and strongly opposed to admitting any but baptized believers to the fellowship of the church or the celebration of the Lord's Supper. The Strict Baptists are only few in number and are fast passing away. The General Baptists were Arminian in teaching. They have within the last year amalgamated with the larger body of Baptists, who are liberal in their teachings, and have almost universally adopted the "Open Communion" principle, both as regards church fellowship and the celebration of the Lord's Supper. Their church government is democratic.

A. Transitive:

I. Lit.: Of the symbolical use of water or anything similar in connection with a person or a thing:

1. Of the use of water in connection with a person: To immerse the body in water, or pour or sprinkle water upon the face, pronouncing at the same time certain sacred words.

(a) To do so with some unknown formula, as John the Baptist did.

"I indeed baptize you with water unto repentance."—*Matt.* iii. 11.

(b) To do so in the name of the Father, of the Son, and of the Holy Spirit. This is the initiatory rite of the Christian church.

"Go ye therefore, and teach all nations, baptizing them in the name of the Father, and of the Son, and of the Holy Ghost."—*Matt.* xxviii. 19.

¶ When the baptized person is an infant it generally receives its name, or, at least, has its name for the first time publicly announced at the time of baptism. This seems to have been the case also with the initiatory rite of the Jewish church—circumcision (*Luke* i. 59); but the naming of the child was no essential part either of the one rite or the other.

2. Of the symbolical use of water or anything similar in connection with a thing: The ceremony which Protestant writers call "baptizing" a bell, designed for the use of Roman Catholics in their worship, is carried out by blessing it and giving it the name of some saint. Roman Catholics do not admit that the expression *baptize* is a legitimate one to employ in this case.

A. As substantive:

I. Historically:

1. *Among the Greeks:* A foreigner; one who could not speak Greek. At first the Romans were included by the Greeks under the term *barbarian*; but as the inhabitants of the great Italian city gradually gained imperial power, and moreover began to consider the Greek language as a desirable if not even an indispensable part of a liberal education, they were no longer placed in the category of "barbarians," nor was their speech deemed "barbarous." When the Greeks became the most civilized people in the world the term *barbarian* came to be used with some reproach, but less so than among ourselves now.

"Proud Greece all nations else *barbarians* held,
Boasting her learning all the world excell'd."

Denham.

"There were not different gods among the Greeks and *barbarians*."—*Stillington.*

2. *Among the Romans:*

(1) *Before the fall of the empire:* A term applied to a foreigner who could speak neither Latin nor Greek.

"I would they were *barbarians*, as they are,
Though in Rome litter'd."

Shakesp.: Coriolanus, iii. 1.

(2) *After the fall of the empire:*

2. A person of whatever race, civilized or uncivilized, who is savage in manners or conduct.

"Europe has been threatened with subjugation by *barbarians*, compared with whom the *barbarians* who marched under Attila and Alboin were enlightened and humane."—*Macaulay: Hist. Eng.*, ch. x.

B. As adjective:

1. Pertaining to a barbarian in the Greek, the Roman, or the English sense. [See the substantive.] Specially in the last of these three, *i. e.*, pertaining to a person belonging to one of the uncivilized races of mankind.

"Some felt the silent stroke of mould'ring age,
Barbarian blindness."—*Pope.*

"Moderation ought to be had in tempering and managing the Irish, to bring them from their delight of licentious *barbarism* unto the love of goodness and civility."—*Spenser: State of Ireland*.

II. Of deficiency in humanity: Cruelty, relentless hardness of heart, whatever be the amount of external polish or intellectual culture. In this sense, BARBARIETY (q. v.) is the more common term.

"They must perforce have melted,
And *barbarism* itself have pitied him."

Shakesp.: Richard II., v. 2.

bóil, bóy; pout, jowl; cat, cell, chorus, chin, bench; go, gem; thin, this; sin, as; expect, Xenophon, exist. ph = f. -cian, -tian = shan. -tion, -sion = shün; -tion, -sion = zhün. -tious, -cious, -sious = shüs. -ble, -dle, &c. = bel, del.

I. Of persons:

It has yellow flowers with an unpleasant smell, which, however, are much frequented by bees. These spores germinate on the leaves or stems of wheat, send out mycelium into the plant, and produce the disease called rust, which was thought to be a distinct fungus. Several generations of this form grow in the summer, but in the older specimens a darker two-celled spore is produced, which remains on the straw during the winter, and, germinating in the spring, produces spores that cause the barberry blight.

But the writers now mentioned had not personal opportunities of seeing the disease. Dr. Malcolmson of Madras, and Dr. Carter of Bombay, who have had this advantage, consider *barbiers* the same as *beriberi* (q. v.).

Cognate with Ir. *barda*=a satire or lampoon; Wel. *bardhas*=philosophy; *bardgan*=a song; *bar*=rage, enthusiasm; Ir. & Arm. *bar*=brilliant, glossy, learned, literary.]

1. *Originally*: A poet by profession, specially one whose calling it was to celebrate in verse, song, and play the exploits of the chiefs or others who patronized him, or those of contemporary heroes in general. Bards of this character flourished from the earliest period among the Greeks, and to a lesser extent among the Romans. Diodorus and Strabo, in the first century B. C., allude to them under the name of Gr. *bardoi*, and Lucan, in the first century A. D., under that of *bardi*. Tacitus seems to hint at their existence among the Germanic tribes. It was, however, above all, among the Gauls and other Celtic nations that they flourished most.

According to Warton, they were originally a constitutional appendage of the Druid hierarchy. At Llanidan, in Anglesea, Wales, formerly inhabited by Druidical conventual societies, vestiges exist of *Tre'r Dryn*=the Arch-Druid's mansion; *Bodrudau*=the abode of the inferior Druids; and near them *Bod-owy'r*=the abode of the Ovades, i. e., of those passing through their novitiate; and *Tre'v Beirdd*=the hamlet of the bards.

They may be even considered as essential constituents of the hierarchy, if the division of it into priests, philosophers, and poets be accurate. The bards did not pass away with the Druids, but flourished, especially in Wales, honored at the courts of princes, and figuring up to the present day at the Eisteddfods or gatherings of bards and minstrels. They were similarly honored throughout Ireland, and indeed among the Celts everywhere.

"There is among the Irish a kind of people called *bards*, which are to them instead of poets: whose profession is to set forth the praises or dispraises of men in their poems or rhyme; the which are had in high regard and estimation among them."—*Spenser: State of Ireland*.

†2. *Later*: A vagrant beggar, who could not or would not work, and who, moreover, pretended to be wanting in understanding, if, indeed, he were not so in reality.

"... That nane sall be thoiled to beg, neither to burgh nor to land betwixt fourteen and seventy yeares, that sike as maks themselves fules or *bairdes*, or others siklike runners about, being apprehended sall be put in the king's ward or irones, sae lang as they have any gudes of their awne to live on."—*Scottish Acts*, i. 413. (*S. in Boucher*.)

3. *Now*: A synonym for a poet.

"Conquerors and kings,

Which stir too strongly the soul's secret springs,
And are themselves the fools to those they fool;
Envi'd, yet how unenviable!"

Byron: Child Harold, iii. 43.

His tenets were founded on the Oriental philosophy. He supposed that God at first made men with ethereal bodies, but Satan tempted these first human beings to sin, and then put round them the grosser bodies which we now possess; and that when Jesus descended on earth He appeared in an ethereal body, and taught men to subdue their carnal depravity by abstinence, meditation, and fasting. ¶ (a) Crabb thus distinguishes the adjectives *bare*, *naked*, and *uncovered*: "*Bare* marks the condition of being without some necessary appendage; *naked* simply the absence of external covering; *bare* is therefore often substituted for *naked*, yet not *vice versa*—e. g., *bare-headed* or *bare-footed*; but a *figure* or the *body* is *naked*. Applied to other objects, *bare* indicates want in general; *naked* simply something external, wanting to the eye—e. g., *bare* walls, a *bare* house; *naked* fields, a *naked* appearance; *bare* in this sense is often followed by the object wanted; *naked* is mostly employed as an adjunct—*bare* of leaves, a *naked* tree. *Naked* and *uncovered* strongly resemble each other; to be *naked* is in fact to have the body *uncovered*, but many things *uncovered* are not *naked*. Nothing is said to be *naked* but what in the nature of things, or according to the usages of man, ought to be covered."

(b) *Bare*, *scanty*, and *destitute* are thus discriminated: "All these terms denote the absence or deprivation of some necessary. *Bare* and *scanty* have a relative sense; the former respects what serves for ourselves, the latter what is provided by others: a subsistence is *bare*, a supply is *scanty*. *Bare* is said of those things which belong to corporeal sustenance; *destitute* of one's outward circumstances in general: *bare* of clothes or money; *destitute* of friends, resources, &c."

(c) The following is the distinction between *bare* and *mere*: "*Bare* is used positively, *mere* negatively. The *bare* recital of some events brings tears; the *mere* attendance at a place of worship is the smallest part of a Christian's duty."

¶ **Barebone's Parliament** (*Hist.*): A derisive nickname given to the first Parliament elected under the auspices of Oliver Cromwell. It was so called because it had as one of its members a Puritan leather-seller in Fleet street known as "Praise God Barebone." It was not a properly representative assembly. Cromwell having requested the several ministers of religion to send in the names of the most pious members of their several congregations, he selected from the lists forwarded to him 139 Englishmen, six Welshmen, four Scotsmen and six Irishmen, and invited or summoned them to the House of Commons. On the appointed day of meeting (July 4, 1653), a hundred and twenty of the selected members actually presented themselves. Five months subsequently, at the suggestion of Colonel Sydenham, they resigned their authority into the hands of Cromwell, who forthwith began to rule under the title of "His Highness the Lord Protector." Barebone's was sometimes called also the "Little Parliament." Some of its measures were enlightened. It was economic of the public money; it desired the codification of English law, an aim unhappily not yet accomplished; and it provided for the registration of births, marriages, and deaths.

From this, perhaps, came the phrase still common, "to *strike* a bargain," meaning simply to make a bargain with due formalities. Or there may be a reference to the striking hands mentioned in *Prov. xxii. 26*; *vi. 1*; also *xi. 15* (margin).

bâr'-i-tône, **bâr'-i-tô'-nô**, *s.* [See BARYTONE.]

bâr'-i-ûm, *s.* [In Ger. *barym*, from Gr. *barys*=heavy. It is so named from the great specific gravity of the native carbonate and sulphate.]

Chem.: A dyad metallic element; symb. Ba; atomic weight, 137. Barium is prepared by the decomposition of barium chloride, BaCl₂, by the electric current, or by the vapor of potassium. It is a white malleable metal, which melts at red heat, decomposes water, and oxidizes in the air. Barium occurs in nature as barium carbonate and sulphate. Its salts are prepared by dissolving the carbonate in acids, or by roasting the native sulphate of barium with one-third of its weight of coal, which converts it into barium sulphide, BaS; this is decomposed by hydrochloric or nitric acid, according as a chloride or nitrate of barium is required. All soluble salts of barium are very poisonous; the best antidotes are alkaline sulphates. The salts of barium are employed as re-agents in the laboratory, and in the manufacture of fireworks to produce a green light. Barium is precipitated as a carbonate, BaCO₃, along with carbonates of strontium and calcium, by ammonia carbonate. [See ANALYSIS.] Barium can be separated by dissolving the carbonates in acetic acid, and adding potassium chromate, which gives a yellow precipitate of the insoluble barium chromate. Barium salts give an immediate white precipitate on the addition of calcium sulphate, an insoluble precipitate with 4HF.SiF₄ (hydrofluosilicic acid), and a white precipitate insoluble in acids with sulphuric acid or with soluble sulphates; this precipitate is not blackened by H₂S. Barium chloride gives a green color to the flame of alcohol, and the spectrum of barium salts contains a number of characteristic green lines.

barium carbonate.

1. *Chem.*: A heavy white powder obtained by precipitating barium chloride or nitrate with an alkaline carbonate. It is nearly insoluble in water. Formula, BaCO₃.

2. *Min.*: A mineral, called also Witherite (q. v.).

barium chloride, BaCl₂. A colorless transparent salt, crystallizing with two molecules of water in flat four-sided tables. A saturated solution boils at 104.5°, and contains 78 parts of the salt dissolved in 100 parts of water.

barium dioxide, BaO₂, is obtained by gently heating baryta in a current of oxygen gas. It is a gray powder, which when heated to a higher temperature gives off oxygen gas, and is re-converted into baryta.

barium monoxide (or *baryta*, BaO). A gray porous mass obtained by heating barium nitrate; it forms a hydrate with water (barium hydrate), producing crystals, BaH₂O₂.8H₂O, which dissolve in twenty parts of cold and two of boiling water, forming an alkaline salt, which rapidly absorbs CO₂ from the air, barium carbonate being precipitated. Barium hydrate can also be obtained by decomposing barium chloride in caustic soda.

barium nitrate, Ba(NO₃)₂. It crystallizes in anhydrous transparent colorless octohedra; they dissolve in eight parts of cold and three parts of boiling water; it is much less soluble in dilute acids.

barium sulphate.

1. *Chem.*: BaSO₄, obtained by adding sulphuric acid or a soluble sulphate to a solution of a barium salt. It is a white heavy powder, insoluble in water or dilute acids. It is used, under the name of *blanc fixe*, as a substitute for white lead in the manufacture of oil paints.

2. *Min.*: A mineral (sp. gr. 4.5) called also Heavy Spar or Barite (q. v.). The powdered mineral is too crystalline to be used as a white paint.

barium sulphato-carbonate. A mineral, a variety of Witherite.

barium sulphide, BaS, is obtained by roasting BaSO₄ with charcoal. It decomposes by exposure to the air; boiled with sulphur, it yields higher sulphides. Barium sulphide is phosphorescent, and has been used to render the dials of clocks luminous in the dark.

A. *As substantive*: The seeds or grains of various species and varieties of the genus *Hordeum*. That most commonly in cultivation is *Hordeum vulgare*, spring or two-rowed barley, especially the rath-ripe and Thanet sorts. *H. hexastichon* (*i. e.*, with the seeds growing in six rows) is the bear or bigg barley. *H. distichon*, two-rowed or common barley, is preferred for malting, which is one of the chief purposes for which barley is cultivated. [MALT.] *H. zeocriton*, or sprat-barley, is more rare. Perhaps the four so-called species now enumerated may be only varieties of one plant. Barley is the hardiest of all the cereals, and was originally a native of Asia, but it is now cultivated all over the world, even as far north as Lapland. In ancient times it was largely used as an article of food, but the greater proportion of the barley now grown is used in the preparation of malt and spirits. For culinary purposes it is sold in two forms, Scotch or pot barley, and pearl barley, the former being the grain partially deprived of its husk; the latter, by longer and closer grinding, being rounded and having the entire husk removed.

Bread made from barley-meal is darker in color and less nutritious than that made from wheat flour; but it is cheaper and more easily digested. One pound of barley-meal contains one ounce of flesh-formers and fourteen ounces of heat-givers.

Barley-meal is sometimes adulterated with oat-husks, and is itself used to adulterate oatmeal, and occasionally wheat-flour; but these admixtures are readily detected by the microscope.

"... bærlíc."—*Sax. Chron.*, An. 1124.

"Ich bouhte hure barliche."—*Piers Plowman*. (*S. in Boucher.*)

¶ In Scripture "barley," Heb. *sêrah*, Sept. Gr. *krithê*, seems properly translated. The Hebrew term is from *sârah*=hair, from *sâr*=to be bristly; referring to the long awns of the barley.

barley-break, **barley-brake**, **barli-break**, **barli-breake**, **barly-break**, **barly-breake**, (*O. Eng.*), **barla-breikis**, **barla-bracks** (*O. Scotch*), *s.*

A game once common, as shown by the frequency with which it was alluded to by the old poets. It was played by six young people, three of either sex, formed into couples, a young man and a young woman in each, it being decided by lot which individuals were to be paired together. A piece of ground was then divided into three spaces, of which the central one was profanely termed "Hell." This was assigned to a couple as their appropriate place. The couples who occupied the other spaces then advanced as near as they dared to the central one to tempt the doomed pair, who, with one of their hands locked in that of their partner, endeavored with the other to grasp them and draw them into the central space. If they succeeded, then they were allowed themselves to emerge from it, the couple caught taking their places. That the game might not be too speedily finished, leave was given to the couple in danger of being taken to break hands and individually try to escape, while no such liberty was accorded to those attempting to seize them. Though the name does not occur in the subjoined lines, the game which they describe is that of *barley-break*.

"Then couples three be straight allotted there,
They of both ends the middle two do fly;
The two that in mid place Hell called were,
Must strive, with waiting foot and watching eye,
To catch of them, and them to Hell to bear,
That they, as well as they, Hell may supply."
Sir Philip Sydney: Arcadia, i. 153.

¶ Most authorities consider *barley-break* identical with *base*, 3 (q. v.). Boucher regards it as identical with a game called in Cheshire a *round*, and in Douglas *ring-dancer* and *roundels*; but the resemblance is far from being close. (*Boucher, Nares, Gifford, &c.*)

Among *opticians*:

1. *Originally*: A modification of the object-glass of a telescope, suggested by Mr. Peter Barlow, with the idea of avoiding the use of flint glass in the construction of object-glasses of large size; discs of flint glass suitable for optical purposes then being both expensive and rare. He proposed to enclose between two convex lenses a fluid lens equal in refractive power to a flint glass of the same dimensions. This proposal was not generally adopted, and the term "Barlow lens" is now mostly applied to the form of lens described under No. 2.

or speculum is increased nearly one-half, and the effect is the same as if the tube were proportionally lengthened, the magnifying power being considerably increased. Another advantage of the Barlow lens is the avoidance of the loss of light which would take place if the same magnifying power were produced by using an eye-glass of shorter focus.

2. *Of Birds*: A

name for the Bernicle Goose (q. v.). Formerly the absurd belief was entertained that these geese sprung from the barnacles described under No. 1. Max Müller believes that the bird was originally called *Hibernicula*, which was converted into *Bernicula* by the dropping of the first syllable, after which the similarity of the name to the Cirriped led to the two being confounded together and generated the myth. Two species of the genus *Lepas* were called by Linnaeus *Lepas anserifera* and *L. anatifera*=goose-bearing, of course with no belief in the fable suggested by the name.

"There are found in the north parts of Scotland, and islands adjacent called Orcaes, certain trees, whereon do grow certain shells of a white color tending to russet, wherein are contained little living creatures: which shells in time of maturity doe open, and out of them grow those little living things, which falling into the water doe become fowles, which we call *barnacles*, in the North of England brant geese, but in Lancashire tree geese."—Gerard: *Herbal*, p. 1,858. (Boucher.)

bar'-na-cle, ***bar'-nī-cle**, ***ber-na-kill**, ***bër-nak** (cle=cēl), s. [Wedgwood believes the word to have come from the East, and to have been used originally for some instrument of torture. Most writers, Mahn included, consider it the same as the preceding word. Latham derives it from *binocle*, and Max Müller from Ger. *brille*, O. Ger. *berulem*, a corruption of *beryllus*. Compare Dan. *brems*, *brandgars*=barnacles as defined below, and Fr. *besicles*=spectacles.]

Generally in plural:

ba-rōm'-ēt-ēr, s. [In Sw., Dan., Dut., & Ger. *barometer*; Fr. *baromètre*; Sp., Port., & Ital. *barometro*; Gr. *baros*=weight, and *metron*=a measure.] An instrument used for measuring the atmospheric pressure. The discovery that this pressure might be counterpoised by a column of mercury standing as high in proportion to the thirty-four feet that water in similar circumstances stands, as the specific gravity of water is to that of mercury (the ratio or proportion, it will be perceived, is an inverse one), was made at Florence in the year 1643 by one of Galileo's pupils, the celebrated Torricelli, but was not quite complete when he died, in 1647.

The most common form of barometer is what is called a *Cistern Barometer*. It consists essentially of a straight glass tube about thirty-three inches long, filled with mercury, and dipping into a cistern of the same metal. It is affixed to a mahogany stand, on the upper part of which is a graduated scale to mark the height in inches at which the mercury stands. When complete, a thermometer stands side by side with it to note the temperature at which the pressure of the atmosphere is tested. In Fortin's barometer the base of the cistern is made of leather, and can be raised or depressed by means of a screw; a constant level of the mercury from which to measure the zero of the scale, unattainable by the ordinary cistern barometer, can be produced by this one; besides which the instrument is more portable. Gay-Lussac's barometer is in the form of a syphon. It has two scales with a common zero point, and graduated in contrary directions. As the one branch, the shorter one, corresponds to the cistern, and the other or longer one to the tube, the difference between the two levels is the true height of the

Cistern Barometer.

mercury. Bunter's barometer is a slight but valuable modification on that of Gay-Lussac. For the aneroid barometer (that "without moisture") see ANEROID. The general mean at the level of the sea is 29.96 inches. A barometer is popularly termed a *weather-glass*. In order to adapt it for this purpose Hooke devised what is called the *wheel-barometer*. It is a syphon barometer, having in its shorter leg a float, a string from which passes over a pulley, and is connected with a weight somewhat lighter than the float. To the pulley is affixed a needle, which moves round a circle graduated to represent the different variations in the weather. [WEATHER-GLASS.] Speaking broadly, a barometer rises for good and falls for bad weather, but there are exceptions to this rule. The more accurate statement is that with S. W., S. E., and W. winds the mercury falls for rain. If it do so rapidly, the probability is that a heavy storm is approaching; if slowly, continued bad weather is to be expected. It rises, if rapidly, for unsettled weather; if gradually, for fine settled weather. A rise, with wind veering N. E., may be indicative of rain.

bār-ō-mēt'-ric, bār-ō-mēt'-ric-al, a. [Eng. *barometer*; -ic, -ical. In Fr. *barométrique*.] Pertaining or in any way relating to the barometer.

In reality it is a woolly-skinned fern (*Cibotium barometz*), stripped of everything but its root-stock and the stipes or stalks of four of its fronds, and then turned upside down.

bār'-ōn, *bār'-rōn, *bar'-ō, *bar, *bēr, *par'-ō, *var, *viro, *virro, *viron, s. [A. S. *baron*=a man (*Bosworth*); Sw., Dan., Dut., Ger., & Fr. *baron*=baron; O. Fr. *ber* (acc. *baron*), *batron*; Prov. *bar* (acc. *baro*); Sp. *baron*, *varon*=(1) a male, (2) a full-grown man, (3) a man of consideration, (4) a baron; Port. *varao*=a male; Ital. *barone*; Low Lat. *baro*, *barus*, *varo*, *viro*=man, husband, baron; but in Class. Lat. *baro*, which, according to Menage, is the origin of *baron*, meant a simpleton, a block-head, though sometimes it is said to have been used for a brave man, a warrior. Cognate with A. S. *wer*=a man; Goth. *vair*; Gael. *bar*, *ber*=a hero, an eminent man; Ir. *fir*, *fear*; Wel. *guer*, *gevir*; Lat. *vir*=a man; Lith. *vyrus*; Sansc. *vira*. (VIRILE.) In Sansc. also *barren* and *bharta* are=husband, and may be compared with *baron* in the phrase *baron and feme* (see A., III.). Compare also Hebrew *geber*=a man.]

A. Of persons:

†I. *Old Law*: A husband in relation to his wife, used in the old phrase *baron and feme*=husband and wife. (*Blackstone: Comment.*, bk. i., ch. 15.)

II. History & Law:

*1. Formerly:

(1) At first apparently every lord of a manor, of which sense the expression *court-baron* is still a memorial. [COURT-BARON.] The Magna Charta granted in King John's time seems to show that originally all lords of manors, who held of the king *in capite*, had seats in the Great Council or Parliament; but their numbers becoming too large for proper deliberation, the king summoned only the greater barons in person, leaving it to the sheriff to convene the smaller ones to another house, which was a very important step in making the separation which at present exists between the Houses of Lords and Commons. (*Blackstone*, bk. i., ch. 3.) [BARONY.]

Hence *(2) the term *baron* came to be confined to the lords of manors summoned by the royal writ in place of by the sheriff. The writ ran "Hac vice tantum." (*Blackstone: Ibid.*)

Barons by ancient tenure were those who held certain lands or territories from the king, who, however, still reserved the tenure in chief to himself.

Barons by temporal tenure were those who held their honors, castles, and manors as heads of their barony, that is, by grand serjeantry. By their ten-

ure they were summoned to Parliament; now they are not entitled to be there till a writ is issued in their favor.

(3) Richard II. made the term *baron* a mere title of honor, by conferring it on various persons by letters patent. (*Blackstone*, bk. i., ch. 3.)

The first baron by patent was John Beauchamp of Holt, who was raised to the peerage by Richard II., in the eleventh year of his reign, October 10, 1387, by the title of Baron of Kidderminster. No other instance occurs until 10 Henry VI.

2. Now:

(1) Any nobleman belonging to the lowest order of the peerage—that immediately beneath the rank of viscount. His style is "The Right Hon. Lord —," and he is addressed as "My Lord." In general, in place of being called "Baron," he is simply termed "Lord A." or "B." His coronet has six large pearls set at equal distances on the chaplet. His coronation robes are like those of an earl, except that he has only two rows of spots on each shoulder. In 1879 there were 248 temporal barons in the House, with 24 bishops, who are also regarded as barons, and rank just above those formerly described.

(2) Any one holding a particular office to which the title *baron* is attached, as the Chief Baron and the Barons of the Exchequer. [EXCHEQUER.] Formerly there were also Barons of the Cinque Ports, viz., two to each of the seven following towns: Hastings, Winchelsea, Rye, Romney, Hythe, Dover, and Sandwich. Till the Reform Bill of 1832 these had seats in Parliament. Instead of these barons there is now a Warden of the Cinque Ports.

"They that bear
The cloth of honor over her, are four barons
Of the cinque ports."

Shakesp.: *Henry VIII.*, iv. 1.

III. *Heraldry*. *Baron and feme* is the term applied where the coats of arms of a man and his wife are borne *per pale* in the same escutcheon. If the woman is not an heiress, then the man's coat is on the dexter side, and the woman's on the sinister; if she is, then her coat must be borne by the husband on an escutcheon of pretense.

B. *Of things*. *Baron of Beef*: Beef in which the two sirloins are not cut asunder, but joined together by the end of the backbone. Dr. Brewer says that it is "so called because it is the *baron* (back part) of the ox, called in Danish the *rug*. It is not so called because it is 'greater' than the sirloin."

baron-court, s. The same as COURT-BARON (q. v.).

***bār'-ōn-a-dŷ, s.** [Eng. *baron*, and suff. -*ady*=state or dignity of.] The dignity of a baron.

bār'-ōn-ēt, *bār'-rōn-ētt, s. [In Sw., Dan., Dut., & Ger. *baronet*; Fr. *baronnet*; Ital. *baronetto*; Low Lat. *baronettus*, dimin. of *baron* (q. v.).]

*I. *Originally*: A term apparently in use as early as the time of Edward III. for certain landed gentlemen not of the dignity of lords, summoned to Parliament to counterbalance the power of the clergy.

"... King Edward the Thirde (as I remember) whoe, being greatly bearded and crossed by the lordes of the cleargye ... was advised to directe out his writtes to certayne gentellmen of the best abilltye and trust, entitling them therein barrons, to serve and sitt as barrons in the next Parliament. By which meanes he had soe many barrons in his Parliament, as were able to weigh doune the cleargye and theyr frendes, the which barrons, they say, were not afterward lordes but only *barronettis*, as sundrye of them doe yet retayne the name."—*Spenser: State of Ireland*.

II. *Subsequently*: The name given to three titled orders.

1. *Baronets of Great Britain*: A titled order, the lowest that is hereditary. Speaking broadly, they

rank in precedence next after the nobility, or, more specifically, next after the younger sons of viscounts and barons; but in reality they are inferior to the Knights of the Order of St. George or of the Garter, certain official dignitaries, and knights-bannerets created on the actual field of battle. The order was instituted by James I., on May 22, 1611, to raise money by fees paid for the dignity, and thus obtain resources for the settlement of Ulster. The number was to be limited to 200; but a device for increasing an honor so profitable to the Treasury was soon found, so that before the death of Charles I. 458 patents for the creation of baronets had been issued; and by the end of 1878 there were 698 baronets in existence. The dignity is generally confined to the heirs male of the grantee. The badge of a baronet is sinister, a hand gules (=a bloody hand) in a field of argent. Etiquette requires that he be addressed as "Sir A. B., Bart."

2. *Baronets of Ireland*: A titled order instituted by James I. in 1619. It is believed that this dignity has not been conferred on any one since the union of Great Britain and Ireland in 1801, but many of the titles granted before the union still remain in the British baronetage.

3. *Baronets of Scotland*: A titled order planned by James I., but actually instituted, not by him, but by Charles I. in 1625, just after the accession of the latter monarch to the throne. The object aimed at in the creation of the order was the planting of Nova Scotia (New Scotland). Each baronet by his patent received eighteen square miles of territory in that colony, with a sea-coast bounding it on one side; or a tract of land extending for three miles along a navigable river, and stretching for six miles inland. Since the union between England and Scotland in 1707, no baronets have been created holding rank in the latter country alone, but some titles existing previously still figure in the British baronetage.

Originally every peer of superior rank had also a barony annexed to his other titles. But now the rule is not universal. Baronies in their first creation emanated from the king. [BARONIAL SERVICE.] Baronies appertain also to bishops, as they formerly did to abbots, William the Conqueror having changed the spiritual tenure of frank-almoyn, or free alms, by which they held their lands under the Saxon government, to the Norman or feudal tenure by barony. It was in virtue of this that they obtained seats in the House of Lords. (*Blackstone: Comment.*, bk. i., ch. 2, 12.) The word is common in Ireland for a subdivision of a county.

bār'-ō-scōpe, s. [In Fr. *baroscope*; Ger. *baroskop*; from Gr. It consists of the beam of a balance with a small weight at one end and a hollow copper sphere at the other. If these exactly balance each other in the air, then the sphere preponderates in a vacuum.

If the Gaelic form of the word be the original one, then, as Wedgwood thinks, a barrack was originally a booth made by branches of trees; if the Spanish one be that from which the others came, then the materials of the hut or cabin would probably be different.]

†1. A hut or small lodge. Formerly it was especially used for a humble temporary building of this character, one of many erected to shelter horsemen, as contradistinguished from similar structures, called huts, for foot soldiers. Then it was extended to embrace any temporary erection for a soldier, to whatever arm of the service belonging.

bār-ris-tēr, ***bār-ṛas-tēr**, ***bār-rēt-ēr** (2), s. [Apparently from *bar*, referring to the fact that a barrister pleads at the bar. Other etymologies have been given.] In England, a member of the legal profession who has been admitted to practice at the bar; a counselor-at-law. [COUNSELOR, COUNSEL.] In old law books barristers were styled *apprentices*, *apprenticii ad legem*, being regarded as mere learners, and not qualified to execute the full office of an advocate till they were of sixteen years' standing; now a barrister of ten years is held competent to fill almost any kind of office. No one who has not been called to the bar can plead in the Superior Courts at Westminster, or, as a rule, in any court presided over by a superior judge. Formerly a distinction was drawn between *utter* (=outer) barristers, who on public occasions in the Inns of Court were called from the body of the hall to the first place outside the bar, while the benchers and readers were called *inner*. In the Inns of Court a distinction was formerly drawn between *Inner Barristers*, who on public occasions occupied a place on a raised dais separated from the rest of the hall by a bar, and *Utter* (i. e., *Outer*) *Barristers*, who were called from among the students to the first place outside the bar. The distinction has long been abolished, the term *barrister* being now used for what were formerly termed *Inner Barristers*, while the *Outer Barristers* have sunk again into the rank of students, from which they were taken. In Queen Elizabeth's reign the *Outer Barristers* were allowed to practice in law courts, but under most other English sovereigns they simply took part in readings and moots at the Inns of Court. A now obsolete regulation, made in 1603, required that no one should be allowed to study for the bar unless he were a gentleman by descent; but at least since 1762, study for the bar has been open, on certain conditions, to any member of the community. A barrister can be disbarred, appeal, however, being allowed him to the judges. The Irish bar is regulated almost exactly like that of England. In Scotland there is a difference of name, barristers being called *advocates*. [ADVOCATE.]

Bartholomew's tide. The festival of St. Bartholomew is celebrated on the 24th of August, and *St. Bartholomew's tide* is the term most nearly coinciding with that date.

¶ Two great historical events have occurred on St. Bartholomew's day, one in France, the other in England.

(a) On the 24th of August, 1572, Paris disgraced itself by the atrocious and treacherous massacre of the Admiral Coligny and an immense multitude of less distinguished Huguenots, one chief instigator of this crime being the queen-mother, Catherine of Medicis, and her son Charles IX., who became an accessory before the event, lending it the sanction of his royal name. A papal medal, with the inscription *Hugenotorum strages*, struck to commemorate the event, was obtainable at Rome till a few years ago. The crime of the 24th of August, 1572, is generally called by Protestant writers "the Massacre of St. Bartholomew," and sometimes in English narrative simply "the Bartholomew."

(b) On the 24th of August, 1662, about 2,000 clergymen, unable conscientiously to sign adherence to the Act of Uniformity, had to leave their livings in the Church of England and make way for others who could accept that Act.

He places them at the base of the Upper Eocene, immediately below the Headon series, and just above the Bracklesham series of the Middle Eocene. The Barton sands have been classed by the Government surveyors as Upper Bagshot, and the Barton clay as Middle Bagshot, but Lyell considers the evidence insufficient as yet completely to bear out these precise identifications. 2. *Bibliog.*: Two apocryphal books or letters which have been attributed to the above-mentioned Baruch.

(a) The first of these was nominally designed to assure the tribes in exile of an ultimate return to their own land. Its date seems to have been the second century B. C., while the real Baruch lived in the latter part of the seventh—that is, about 500 years before.

(b) The second epistle, or book, was nominally designed to counsel those Jews who were left in Palestine, during the time that their brethren were in captivity abroad, to submit to the Divine will. It was written probably about the same date as the former one—i. e., the second century B. C.

¶ In botanical Latin it is rendered *basilaris*, though the etymological affinity between this and *basal* is not close.

bā-sāl't, *s.* [*In Dut. & Ger. basalt; Fr. basalte; Port. basaltas, basalta; from Lat. basaltas (Pliny), said to have been derived from an African word, and to have meant basaltoid syenite, from Ethiopia or Upper Egypt.*]

1. *Gen.:* Any trap rock of a black, bluish, or leaden gray color, and possessed of a uniform and compact texture. (*Lyell: Manual of Geology*, ch. xxviii.)

2. *Spec.:* A trap rock consisting of augite, feldspar, and iron intimately blended, olivine also being not unfrequently present. The augite is the predominant mineral; it is, sometimes, however, exchanged for hornblende, to which it is much akin. The iron is usually magnetic, and is, moreover, often conjoined with titanium. Other minerals are also occasionally present, one being labradorite. It is distinguished from dolerite, or dolerite, by its possessing chlorine disseminated through it in grains. It is of a very hard durable nature, and may be used to advantage in macadamizing roads.

The specific gravity of basalt is 3.00. It so much tends to become columnar that all volcanic columnar rocks are by some people called basalt, which is an error. There are fine columnar basalts at the Giant's Causeway in the north of Ireland; in Scotland at Fingal's Cave and other parts of the island of Staffa; and along the sides of many hills in the old volcanic district of Western and Central India. Non-columnar basalts may be amorphous, or they may take the form of volcanic bombs cemented together by a ferruginous paste, or again they may be amygdaloidal. (*Lyell: Man. of Geol.*, ch. xxviii., &c.)

bā-sāl'tōid, *a.* [*Lat. basaltas (BASALT), and Gr. eidos = form, appearance.*] Presenting the appearance of basalt; resembling basalt; having basalt in its composition.

It is placed by Dana as one of his Crypto-crystalline varieties of Quartz. It is a velvet black siliceous or flinty jasper. If an alloyed metal be rubbed across it, the color left behind will indicate the nature and the depth of the alloy; hence arises the name of Touchstone. [**JASPER**, **QUARTZ**.]

basan-a-nō-mēl-ane, **bas-a-nō-mēl-an**, *s.* [*Gr. basanos = a touchstone, and melas = black.*] A mineral believed to be identical with Ilmenite. (3) *Of things:* Mean, vile, worthless. *Spec.:*

(a) *Of metals:* Of little value. (Often used of the less precious metals in coins or alloys. In the case of gold and silver coins or alloys, all other metals combined with them are regarded as base, and a coin in which these other metals are in undue quantity is said to be *debased*.)

"A guinea is pure gold if it has nothing but gold in it, without any alloy or baser metal."—*Watts*.

"He was robbed indirectly by a new issue of counters, smaller in size and baser in material than any which had yet borne the image and superscription of James."—*Macaulay: Hist. Eng.*, ch. xv.

If a grant be made to a person and his heirs so long as he or his family occupies a certain farm, this is a base tenure, for the grant ceases if the farm be no longer occupied by the grantee or his heirs. (*Blackstone: Comment.*, bk. ii., ch. 9.)

(2) *Scots Law:* Base rights are those which are possessed by a person who has had feudal property disposed to him by one who arranges that it shall be held under himself and not under his superior.

B. As substantive: That which is physically, socially, morally, or otherwise base; specially, that which is morally so.

"... Why brand they us

With base? with baseness? bastardy? base, base?"

Shakesp.: Lear, i. 2.

Plural: Persons low or despised.

¶ Crabb thus distinguishes the terms *base*, *vile*, and *mean*: "*Base* is a stronger term than *vile*, and *vile* than *mean*. *Base* marks a high degree of moral turpitude; *vile* and *mean* denote in different degrees the want of all value or esteem. What is *base* excites our abhorrence; what is *vile* provokes disgust; what is *mean* awakens contempt. *Base* is opposed to magnanimous; *vile* to noble; *mean* to generous. Ingratitude is *base*; it does violence to the best affections of our nature; flattery is *vile*; it violates truth in the grossest manner for the lowest purposes of gain; compliances are *mean* which are derogatory to the rank or dignity of the individual."

***bāse (3), *bāys, *barš, *bar-rŷs, s.** [The form *bars* seems the older one, occurring as early as the reign of Edward I. *Base* is apparently a corruption of it. The name *bars* is said to have been given because the place in which it was first played was, figuratively speaking, "barred" off from the intrusion of those who were not in the game.] Formerly a game for children, the full name of which was *Prisoner's Base* or *Prisoner's Bays*. Two equal parties of young people faced each other in line, each line connected by a joining of hands. Behind each line was a "base" or home, of which one kept hold. If any person breaking off from the

line ran into the intermediate space, he was immediately followed by an opponent from the other side, who, if he caught him, gained a score for his own party. However many such pursuits might take place, each person giving chase had to stick to the fugitive whom he had originally singled out. In some countries the game was called *Prisoner's Bars*, or *Prison Bars*, not *base*. [See etymology.]

"He wende in a day to plawe

¶ The baskets made by the old inhabitants of Britain were so good that they became celebrated at Rome, and were called by a Latin name which was confessedly only their native appellation pronounced by foreign lips. Martial thus speaks of them: "Barbara de pictis venit bascauda Britannis" ("The barbarian basket came from the painted Britons"). By "barbarian" he probably meant made by foreigners, as contradistinguished from Romans, and did not mean in any way to impeach the excellence of the manufacture. Mr. Freeman (*O. Eng. Hist. for Children*) instances *basket* as one of the few Welsh words in English, and points out that the small number that do exist are mainly the sort of words which the women, whether wives or slaves, would bring in. From this and other facts, he infers that in what at the end of the sixth century had become England, the prior inhabitants had been all but extirpated by the Anglo-Saxon invaders.

He and his fellows sound the sackbut, whose notes are more doleful than the notes of other music are; though indeed some say the *bass* is the ground of music. And for my part, I care not at all for that profession which begins not in heaviness of mind. The first string that the musician usually touches is the *bass*, when he intends to put all in tune. More specifically, they stand out less than half their proper proportions: had they stood out half their proportions, the term used would have been *mezzo-relievo* (meaning, in middle relief); and had they done so more than half, the word used would have been *alto-relievo*, signifying=in high, bold, or strong relief.

B. Technically:

1. *Med.*: Any substance which constitutes the medium in which the human body, or a part of it, is immersed for the maintenance or recovery of health or strength. The most common media are water of various temperatures, watery vapors, and air.

1. *A Water Bath*. This may be *natural* or *artificial*. Rivers, lakes, and the sea afford facilities for a *natural* bath; various public and private appliances are designed to furnish an *artificial* one. In the latter case the temperature of the water may be varied at pleasure. Arranged by temperature, six kinds of baths are in use for medical or other purposes:

Name of Bath.	Temperature.
(a) A cold bath	33° to 60° Fahr.
(b) A cool bath	60° to 75° "
(c) A temperate bath	75° to 85° "
(d) A tepid bath	85° to 92° "
(e) A warm bath	92° to 98° "
(f) A hot bath	98° to 106° "

All baths below 88° in temperature impart the sensation of cold, those above it of heat. In an artificial bath, not merely can the temperature be raised or lowered at pleasure, but various methods may be adopted of applying the liquid. A bath may be taken by the person walking or plunging into it; by his more or less completely lying down in it; by the sudden affusion of water upon him from above, called the *shower-bath*; or by his being sprinkled with it, or applying it to himself by means of a sponge. Or a stream of water may be turned upon him, in which case the name applied is a *douche* or *douse*, from Ital. *doccia*=*douche*. Or only a part of the body may be immersed, as in the *hip-bath* and the *foot-bath*. Moreover, the water employed may be saline or impregnated with other constituents, as sulphur, iodine, or, in the case of a foot-bath, mustard.

2. *A Watery-vapor Bath*. If it is intended that the vapor should be breathed, there are three grades of temperature in the vapor bath: the first from 96° to 106°, the second from 106° to 120°, and the third from 120° to 160°. If not intended to be breathed, there are also three: the first from 90° to 100°, the second from 100° to 110°, and the third from 110° to 130°.

3. *An Air Bath*: The exposure of the naked body to the atmosphere of a room of a certain temperature varying from 90° to 130°.

4. *Photography*: A solution in which plates or papers are immersed or floated, or the vessel holding such solution. Baths are known as *sensitizing* [NITRATE OF SILVER], *fixing*, *toning*, or *washing*.

II. Chemistry:

1. *Formerly (Spec.)*: A vessel of water in which another one was placed which required a lesser amount of heat than that furnished by the naked fire.

2. *Now (Gen.)*: Any medium, such as heated sand, ashes, or steam, through which heat is applied to a body.

III. *Heraldry, &c. Order of the Bath*: An order of knighthood, so called because the recipients of the honor were required formerly to bathe the evening before their creation. It was instituted by Henry IV. in 1399, and, having fallen into disuse, was revived by George I. in 1725. Under George IV. its regulations were modified, and now there are various subdivisions of the order, viz., Knights Grand Cross of the Bath (G. C. B.), Knights Commanders of the Bath (K. C. B.), and Companions of the Bath (C. B.). Under each of these classes there are now a military and a "civil" (meaning a civilian) subclass. The ribbon worn by the Knights of the Bath is crimson, with the Latin motto, "*Tria juncta in uno*"=three (England, Ireland, and Scotland, or their emblems, the rose, shamrock, and thistle) joined in one.

ba-thyb'-i-ūs, s. [From Gr. bathus=deep, and bios=life, course of life. Lit.=deep life, life in the depths.]

Biol.: A peculiar slimy matter dredged up in the North Atlantic, in 1857, from a depth of 6,000 to 25,000 feet, by the crew of the Cyclops, when examining what has since been called the "Telegraph Plateau," for the deposition of the Atlantic Telegraph Cable. Specimens of this viscous mud, examined by Professor Huxley in 1858, were re-examined by him with higher microscopic power in 1868, when he came to the conclusion that they contained a protoplasmic substance apparently existing in masses over wide areas of ocean-bottom. Minute bodies, which he had before called coccoliths, of two forms [COCCOLITH], were believed to stand to the gelatinous protoplasm in the same relation as the spicula of sponges to the softer parts of the animal. Professor Haeckel, after examining the slimy substance, adopted the views of Professor Huxley, and attributed the origin of the protoplasmic substance, though not dogmatically, to spontaneous generation. It was named after him, by Professor Huxley, *Bathybius Haeckelii*. The naturalists of the exploring vessel Porcupine, in 1868, stated that they had found Bathybius alive, but considered it to be derived from sponges, &c. Those of the Challenger, however, failed to find it in the parts of the ocean which they dredged over, and propounded the hypothesis that the Bathybius was nothing more than a precipitate from the sea-water by the alcohol in which the specimens had been preserved. More recently, again, the Arctic navi-

gator Bessels, of the *Polaris*, considered that he had found masses of undifferentiated protoplasm in the Greenland seas. The subject requires further investigation. (Q. J. Microscop. Soc., 1868, p. 210; Proc. Roy. Soc., vol. xvii., 190-1; Prof. Allman's Presidential Report at British Association Meeting at Sheffield in 1879.)

¶ In some editions it is "*battalia* trebles."

2. An assemblage of companies; the tactical and administrative unit of infantry—that is, the first body that is, as a rule, used independently, and commanded by a field officer (major or lieutenant-colonel). In the United States army a battalion is composed of two or more companies, not exceeding six, and is formed for battle in three echelons, a firing line, a line of supports, and a reserve.

(a) *English battalions* are formed of ten companies for administrative and eight for tactical purposes. The first twenty-five regiments have two battalions, the remainder, originally of one battalion each, are now linked in pairs according to their territorial derivation. Linked-battalions are interchangeable as regards officers, and each shares the honors and advantages of the other. Two regiments of Rifles have four battalions each, and the three regiments of the Guards seven battalions in all. The peace strength of a battalion is about 400 men, but varies; its war strength in the field is 1,000 men, with one lieutenant-colonel, two majors, eight captains, sixteen subalterns, four officers of the regimental staff (adjutant, paymaster, quartermaster, and medical officer), and fifty sergeants. The corporals and lance-corporals fall in with the privates in the ranks, and therefore number among the "rank and file."

(b) *French battalions*. By the laws of December 2, 1874, and January 20 and March 13, 1875, the French Infantry is divided into (1) Infantry of the Line, (2) Regiments of Zouaves, (3) Regiments of Tirailleurs Algériens, and (4) Battalions of Chasseurs à Pied. The 144 Regiments of Infantry of the Line have each four battalions; a battalion (which is divided into four field companies) consisting of 12 commissioned officers, 54 non-commissioned officers, and 264 soldiers—in all 330 men, raised in time of war to 1,000 men. The Regiments of Zouaves have, in

peace, 612 men in a battalion, and in war 1,000. The Tirailleurs Algériens, who in time of peace are always in Algeria, or at least have been so for the last eight years, have, in peace, 652 men in a battalion, and in war 1,000 men. Finally, the Chasseurs à Pied have, in peace, 468 men, and in war 1,000 men.

(c) *German battalions*. With the exception of the 116th (Hesse) Regiment, the 148 Line Regiments have three battalions. The Yägers are formed into twenty-six separate battalions. To each line regiment is attached a Landwehr regiment of two battalions, and these latter bear the same number as the regular regiments to which they are affiliated. The five Prussian Guard Regiments have 22 officers and 678 men per battalion in peacetime, the remaining regiments having 18 officers and 526 men per battalion, and the Yägers 22 officers and 526 men. On mobilization for war all battalions are raised to a strength of 22 officers and 1,000 men, with a regimental staff of one commandant, one extra field officer, and one aide-de-camp. Pioneer battalions are practically field engineer bodies, and are divided into Pontoniers (for bridging), and Sappers and Miners (for siege operations, demolitions, or the construction of artificial defenses). They have each three field and one dépôt company; the former comprising fifteen officers and 650 men.

II. Figuratively: A great number of anything.

But in battalions."

băt-tēr-īng, pr. par. & a. [BATTER (1), *v.*]

battering-ram, s. An ancient military engine used for battering down walls. It existed among the Assyrians. See the engraving, taken from a tablet dated about 880 B. C. In its most perfect form among the Romans it consisted of a pole or beam of wood, sometimes as much as 80, 100, or even 120 feet in length. It was suspended by its extremities from a single point or from two points in another beam above, which lay horizontally across two posts. When at rest it was level, like the beam

above it. When put in action against a wall, it was swung horizontally by men who succeeded each other in constant relays, the blow which it gave to the masonry at each vibration being rendered all the more effective that one end of it was armed with iron. This, being generally formed like a ram's head, originated the name *aries* (ram), by which it was known among the Romans, and *battering-ram*, which it obtains among ourselves. A roof or shed covered it to protect the soldiers who worked it from hostile missiles, and to facilitate locomotion it was placed on wheels.

battering-train, s. An artillery train for siege operations.

băt-tēr-ŷ, s. [In Sw. *batteri*; Dan., Ger., & Fr. *batterie*; Dut. *batterij*; Sp. & Port. *bateria*; Ital. *batteria*. From Fr. *battre*, Prov. *bataria*=to beat. (BATTER.) Essential signification, a beating; hence apparatus for inflicting one.]

A. Ordinary Language:

†**I.** The act of beating or battering.

†**II.** The state of being beaten or battered; a legal action raised in consequence of having been beaten. [B., I.]

†**III.** The wound or other injury produced by a beating.

1. *Lit.*: A wound or other injury of the body. [B., I.]

"... may increase the damages at their own discretion; as may also be the case upon view of an atrocious battery. But then the battery must likewise be alleged so certainly in the declaration that it may appear to be the same with the battery inspected."—*Blackstone: Comment.*, bk. iii., ch. 22.

2. *Fig.*: A wound or impression on the heart.

"For where a heart is hard, they make no battery."
Shakesp.: Venus and Adonis, 427.

IV. Apparatus by which the act or operation of battering is effected.

1. *Lit.*: In the military sense. [B., II. 1, 2.]

"A dreadful fire the floating batt'ries make,
O'erturn the mountain, and the forest shake."
Blackmore.

(b) An argument.

"Earthly minds, like mud walls, resist the strongest batteries."—*Locke.*

B. Technically:

I. Law: The unlawful beating of another, or even the touching him with hostile intent. It is legitimate for a parent or a master to give moderate correction to his child, his scholar, or his apprentice. A churchwarden or beadle may gently lay hands on a person disturbing a congregation. A person, also, who is violently assailed by another may strike back in self-defense. He may do so also in defense of his property. But to strike any one in anger, however gently, without these justifications, exposes one to the liability to be prosecuted for assault and battery, the assault being the menacing gesture and the battery the actual blow. [ASSAULT.] Wounding and mayhem are a more aggravated kind of battery. (*Blackstone: Comment.*, bk. iii., ch. 8.)

II. Military:

1. *Breaching (siege) battery*: One placed as close as possible to the object to be destroyed; as the stone revetment of a fortress.

2. *Counter or direct (siege) battery*: One intended to crush the opponent's fire by an equal number of heavy guns.

3. *Cross batteries*: Two batteries playing on the same point from two different positions.

4. *Elevated (siege) battery*: One in which the gun platforms are on the natural level of the ground.

5. *Enfilading battery*: One which is placed on the prolongation of the line occupied by the enemy.

6. *Fascine battery*: One made of fascines.

7. *Floating battery*: A heavily armed and armored vessel intended for bombarding fortresses and not for sea cruising.

8. *A gabion battery*: One built up of gabions.

9. *Half-sunken battery*: One in which the terreplein is sunk two feet below the level of the ground.

10. *Masked battery*: One that is concealed from view of the enemy by brushwood or the non-removal of natural obstacles in front until it is ready to open fire.

11. *Mortar battery*: One without embrasures in the parapets, and the platform is horizontal. The shells are fired over the parapet at an angle of 45°.

12. *Open batteries*: Those which are not protected by earthen or other fortifications.

13. *Ricochet battery*: One in which the guns are placed on the prolongation of the front of an enemy's battery, so that by firing low charges the shot or shell may be made to bound along inside the work and dismount the guns.

14. *Sand-bag battery*: One constructed in rocky or sandy sites of sand-bags filled with earth or sand.

15. *Screen (siege) battery*: One in which the actual gun battery is protected by a low earthen screen placed parallel to and a short distance from the main battery.

16. *Sunken (siege) battery*: One in which the gun platforms are sunk three feet below the surface.

17. A certain number of artillerymen united under the command of a field officer, and the lowest tactical unit in the artillery. In a battery there are gunners who work the guns, and drivers who drive the horses by which these guns are transported from place to place. Batteries are usually distinguished as *Horse, Field*, and *Garrison*. The two first consist of six guns each.

(1) *Horse batteries* are those in which the gunners are carried partly on the carriages and partly on horses.

(2) *Field batteries* are those in which all the gunners are carried on the carriages; and these are divided again into (a) Mountain and (b) Position Batteries.

(3) *Garrison batteries* are those bodies of foot artillerymen who have to serve and mount the heavy guns in forts or coast batteries.

III. Physics:

1. *An electric battery*: One consisting of a series of Leyden jars [LEYDEN JAR], the external and

Battery of Leyden Jars.

internal coatings of which are respectively connected with each other.

2. *A magnetic battery or magazine*: One consisting of a number of magnets joined together by their similar poles.

3. *A Thermo-electric battery*: One in which a number of thermo-electric couples are so joined together that the second copper of the first is soldered to the bismuth of the second, the second copper of this to the bismuth of the third, and so on. It is worked by keeping the odd solderings, for instance, in ice, and the even ones in water at a temperature of 100° Fahr.

4. *A voltaic battery or voltaic pile*: A battery or pile constructed by arranging a series of voltaic elements or pairs in such a way that the zinc of one element is connected with the copper of another, and so on through the whole series. The first feeble one was made by Volta, who used only a single pair. [VOLTAIC PILE.] There are two forms of it, a *Constant Battery* and a *Gravity Battery*.

(a) *A constant battery, or constant voltaic battery*: One in which the action continues without material alteration for a considerable portion of time. This is effected by

employing two liquids instead of one. The first and best form of constant battery is called a Daniell's battery, after its inventor, who devised it in the year 1836. It consists of a glass or porcelain vessel containing a saturated solution of sulphate of copper, immersed in which is a copper cylinder open at both ends and perforated by holes. At the upper part of the cylinder is an annular shelf perforated by holes, and below the level of the solution. Inside the cylinder is a thin porous vessel of unglazed earthenware, and inside this last a bar of zinc is suspended. Two thin strips of copper are fixed by binding-screws to the copper and to the zinc; and several of these cylinders, connected together by uniting the zinc of one to the copper of the next, form a battery. To keep it in action, crystals of sulphate of copper to replace those consumed are placed on the annular shelf, and in the porous vessel is placed a solution of salt or diluted sulphuric acid along with the bars of amalgamated zinc. As

the several chemical elements now mentioned act on each other, a constant stream of electricity is evolved. To this type belong Grove's, Bunsen's, Callan's, Smee's, Walker's, and Marié Davy's batteries.

(b) *A gravity battery*: One in which the separation is produced by the difference of gravity in the substances themselves. To this type belong Callaud's and Menotti's batteries. (*Atkinson: Ganot's Physics*, bk. x., ch. 1.)

battery-resistance, *s.* Resistance occurring in connection with a voltaic or other battery.

(2) Between individuals. (In this case the word more commonly employed is *combat*.) [B. 1.]

2. Figuratively:

(1) *Of a struggle of any kind:*

(a) A long protracted military, political, social, or other struggle.

"For Freedom's battle once begun,
Bequeathed from bleeding sire to son,
Though vanquished oft is ever won." *Byron*.

(b) The struggle for existence which every human being, as also every animal and plant, must carry on during the whole period of his or its life.

"... other variations useful in some way to each being in the great and complex battle of life."—*Darwin: Origin of Species* (ed. 1859), ch. iv., p. 80.

(2) *Of success in a fight or struggle:* Victory in battle.

"... the race is not to the swift, nor the battle to the strong."—*Ecclesiastes* ix. 11.

B. Technically:

1. *Law. Trial by battle, or wager of battle* (or *battel*, as the spelling was): A barbarous method of deciding in the court of last resort, by personal combat, all civil and criminal questions turning on disputed matters of fact. The practice seems to have been immemorially in use among the Northern nations; the Burgundians reduced it to stated forms about the end of the fifth century; from them it passed to the Franks and Normans, and through William the Conqueror came to be established in England. It was used (1) in courts-martial, or courts of chivalry and honor; (2) in appeals of felony; and (3) upon cases joined in a writ of right—the last and most solemn decision of real property. In civil actions the parties at variance appointed champions to fight for them, but in appeals of felony they had to do so themselves. The weapons were batons of an ell long, and a four-cornered target. The combat went on till the stars appeared in the evening, unless one of the combatants proved recreant and cried *craven*. If he did so, or if his champion lost the battle, Divine Providence was supposed to have decided that his cause was bad. If the one who thus failed was appellant against a charge of murder, he was held to have done the felonious deed, and without more ado was hanged. Henry II. struck the first blow at the system of trial by battle by giving the defendant in a case of property the option of the grand assize, then newly introduced. The last trial by battle in the Court of Common Pleas at Westminster was in the year 1571, the last in the provinces in 1638. The case of *Ashford v. Thornton*, in 1818, having nearly led to a judicial

duel of the old type, the Act 59 Geo. III., ch. 46, passed in 1819, finally abolished trial by battle. Montesquieu traces both *dueling* and knight-errantry back to the trial by battle. (*Blackstone: Comment.*, bk. iii., ch. 22, and bk. iv., chs. 27, 33, &c.) 2. *Nat. Science. Battle of life*. [A., III. 2 (b).]

¶ Crabb thus distinguishes the words *battle*, *combat* and *engagement*:—"Battle is a general action requiring some preparation; *combat* is only particular and sometimes unexpected. *Combat* has more relation to the act of fighting than *battle*, which is used with more propriety simply to denominate the action. 'In the battle the combat was obstinate and bloody.' In this sense *engagement* and *combat* are analogous, but the former has a specific relation to the agents and parties engaged, which is not implied in the latter term. We speak of a person being present, or wounded, or fighting desperately in an *engagement*; on the other hand, we speak of *engaging* in a *combat*, challenging to single *combat*, &c. Battles are fought between armies only; they are gained or lost. Combats are entered into between individuals, in which they seek to destroy or excel. Engagements are confined to no particular number, only to such as are engaged. A general engagement is said of an army when the whole body is engaged; partial engagements respect only such as are fought by small parties or companies of an army."

Scott: Marmion, i. 8.

¶ In the first example Jamieson considers that *battar-ax* may be an error of an early transcriber for *battal-ax*; if not, then it is directly from Fr. *battre*=to beat.

2. *Fig.*: Military power. The battle-ax in Jer. li. 20 is the military power by the instrumentality of which God should execute his judgment on Babylon.

battle-ship, s. A warship of the largest class; a warship designed or used for fighting in the line of battle. [WARSHIP.]

"It should be noted by those who consult these or other lists of navies, that although the larger vessels referred to therein are classified as either *battleships* or armored vessels and cruisers, or protected vessels, such classification, by whomsoever used, is quite relative. There are many so-called 'protected cruisers' capable of holding their own with certain of the so-called armored *battleships*," but because this is the case, it must not be hastily assumed that all cruisers can adequately fulfill the duties of a *battleship*. If, in any circumstance, a cruiser takes her place in the line of battle, then she becomes a *battleship*."—*Hazell's Annual* for 1897.

A. *As adjective:* Of a reddish-brown, approaching to a chestnut color. (Applied chiefly to horses, many of whom are of the hue now described, with a black mane and tail.)

"... my lord, you gave
Good words the other day of a bay courser
I rode on. 'Tis yours because you liked it."

Shakesp.: *Timon of Athens*, i. 2.

B. *As substantive:*

1. The color described under A.

"A bay horse is what is inclining to a chestnut; and this color is various, either a light bay or a dark bay, according as it is less or more deep. There are also colored horses that are called dappled bays. All bay horses are commonly called brown by the common people."

"All bay horses have black manes, which distinguish them from the sorrel that have red or white manes."

"There are light bays and gilded bays which are somewhat of a yellowish color. The chestnut bay is that which comes nearest to the color of the chestnut."—*Farrier's Dict.*

bāy (1), *bāye, *s.* [In Fr. *baie*; Prov., Sp., & Port. *bahia*, Ital. *baia*, *baja*; Low Lat. *baia*; Ir. & Gael. *badh*, *bagh*; Bisc. *baid*, *baiya*=harbor. Wedgwood considers Sp., &c., *bahia* the original form, and derives it from Catalan *badia*=a bay, and *badar*=to open, to gape.]

A. *As substantive:*

1. *Geog. & Ord. Lang.*: An arm or inlet of the sea extending into the land with a wider mouth proportionally than a gulf. Compare in this respect the Bay of Biscay with the Gulf of Venice.

"And as the ocean many bays will make."

Byron: *Childe Harold*, iv. 157.

2. *Hydraulics & Ord. Lang.*: A pond-head raised to keep a store of water for driving a mill.

3. *Arch. & Ord. Lang.*: A term used to signify the magnitude of a building. Thus, "if a barn consists of a floor and two heads, where they lay corn, they call it a barn of two bays. These bays are from fourteen to twenty feet long, and floors from ten to twelve broad, and usually twenty feet long, which is the breadth of the barn." (*Builder's Dict.*, *Johnson, &c.*)

"If this law hold in Vienna ten years, I'll rent the fairest house in it after threepence a bay."—*Shakesp.: Measure for Measure*, ii. 1.

bay-window, *s.*

Arch.: A window projecting beyond the line of the front of a house, generally either in a semi-hexagon or semi-octagon. Strictly speaking, a bay-window rises from the ground or basement, while an *oriel* is supported on a corbel or brackets, and a *bow window* is always a segment of an arch; but in ordinary use these distinctions are seldom accurately observed, all three words being used as synonymous.

"... it hath
bay-windows transparent as baricades."—*Shakesp.: Twelfth Night*, iv. 2.

bāy (2), *s.* [Fr. *abois*, *abois*=barkings, bayings; *abbayer*=to bark or bay at. The original form of the word was *abay*, *abaye*, or *abey*.]

(a) *Of a stag or other animal*: The state, position, or attitude of a stag or other animal hunted by hounds when, despairing of escape, it turns round and faces its pursuers.

Spenser: *F. Q.*, VI. vii. 47.

"This ship, for fifteen hours, sate like a stag among hounds *at the bay*, and was sieged and fought with in turn by fifteen great ships."—Bacon: *War with Spain*.

bāy (4), ***bāye**, *s.* [Probably from *Fr. baie*; *Sp. bayra*=a berry. Remotely from *Lat. bacca* (q. v.)]

A. As substantive:

†1. A berry, and specially one from some species of the laurel. [See No. 2.]

2. The English name of the *Laurus nobilis*. A fine tree with deep-green foliage and a profusion of dark-purple or black berries. Both of these have a sweet, fragrant odor, and an aromatic, astringent taste. The leaves, the berries, and the oil made from the latter are narcotic and carminative. The leaves were anciently used to form wreaths or garlands with which to encircle the brows of victors. The bay is common in Spain, Italy, Greece, and the Levant. [LAUREL.] It is common in English gardens, the leaves being often used for flavoring certain dishes. There are several trees called by the same name. The Red Bay of our Southern States is *Laurus Caroliniensis*. The White Bay is *Magnolia glauca*.

‡ In this country *bay* is locally used also for a tract of land covered with bay-trees. (*Drayton: S. Carolina*.)

3. *Plur. (Poetic)*: An honorary crown, garland or any similar reward bestowed as a prize for excellence. [See No. 2.]

bay-rum, *s.* An aromatic, spirituous liquid, used by hair-dressers and perfumers, prepared in the West Indies by distilling rum in which bay leaves have been steeped. As imported it is almost colorless, and contains eighty-six per cent. of proof-spirit. It is difficult to obtain genuine bay-rum, except directly from the importer, more than one-half of that consumed in the United States being an artificial mixture of oil of bay, alcohol, and water.

bay-tree, *bay tree*, *s.*

1. *Ord. Lang.*: The same as BAY (4), No. 2. It is sometimes called also the Sweet Bay-tree.

2. *Scripture*. The bay-tree of Ps. xxxvii. 35, Heb. *ezrachh*, from *zarachh*=to spring up, may be the *Laurus nobilis*, though this is by no means certain. Gesenius makes it simply an indigenous tree, as distinguished from one transplanted. The Septuagint translators, mistaking *arzachh* for *ezrachh*, called the tree "the cedar of Lebanon."

"I have seen the wicked in great power, and spreading himself like a green bay-tree."—Ps. xxxvii. 35.

bāy (1), *v. t.* [From *Eng. bay* (1)=an arm of the sea.] To embay, to shut in, to inclose, to encompass, to surround, as a bay is inclosed to a certain extent by land.

Zoology: A family of Arachnida (Spiders), of the order Acarina. They have a rostrum and palpi of extreme length, have their bodies divided by a constriction, and live among damp moss.

bdēl'-lī-ūm (b silent), s. [In Ger. and Fr. *bdellium*; Port. *bdellio*; Lat. *bdellium* and *bedella*; Gr. *bdellion*. Apparently akin also to Heb. *bdholachh*, from *badhāl*=to separate, to select.]

I. Scripture. The "bdellium" of Scripture is in Heb. *bedholachh* (see etym.), rendered in the Septuagint of Gen. ii. 12 *anthrax* (literally, burning coal) = . . . the carbuncle, ruby, and garnet (*Liddell and Scott*), the red sapphire (*Dana*); while in Numb. xi. 7 it is translated *krystallos*= . . . rock crystal. Some modern writers, following the Septuagint translation, make it a mineral, as are the "gold" and the "onyx stone" with which it is associated in Gen. ii. 12. Others think that it was the gum described under II. and III. 2; while the Rabbins, Bochart, and Gesenius consider that it was a pearl or pearls.

"And the gold of that land is good: there is *bdellium* and the onyx-stone."—*Genesis* ii. 12.

"And the manna was as coriander-seed, and the color thereof as the color of *bdellium*."—*Numbers* xi. 7.

II. Class. Nat. Hist. The *bdellium* of Pliny was once supposed to have been the gum of the Palmyra Palm, *Borassus flabelliformis*, but was more probably a Balsamodendron, apparently *B. Mukul* (III. 2).

III. Modern Botany, Old Pharmacy, and Commerce:

1. Indian *bdellium* or *False Myrrh*: A gum resin produced by *Balsamodendron Roxburghii* or *Amyris Bdelium*. It appears in light-colored pellicles in the bark of the tree, which peel off from time to time; they diffuse for some distance round a fragrance of a delightful kind, but not equal to that of myrrh. It was formerly used in plasters.

2. The *bdellium* of the Persian Gulf: A gum resin derived from *Balsamodendron Mukul*.

3. African *bdellium*: Two gum resins, the one from *Balsamodendron Africanum*, which grows in Abyssinia and Western Africa; the other from a composite plant, *Ceradia furcata*. (*Treas. of Bot.*)

Surgery: A cupping-glass, to which are attached an exhausting syringe and a scarificator.

bē, *bī, *bēn (pr. par. *beang*, **beeing*, **beynge* (Eng.); **beand* (O. Scotch) (pa. par. *been*, **ben*, **be*), v. i. [A. S. *beon*, *beonne*=to be, to exist, to become. It is thus declined: *ic beo*=I am; *thu beost*, *best*, *byst*=thou art; *he byth*, *bith*, *we beoth*, *beo*, &c. Gael. *bī*=to be; Ger. *ich bin*=I am; O. H. Ger. *bun*, *bin*=to be; Goth. *banan*; Slav. *byti*; Lith. *buti*; Sansc. *bhū*=to be. Compare also Lat. *fui*=I was; Gr. *phuō*=to bring forth, to produce.] The substantive verb. It is used—

I. As a copula connecting the subject and its predicate; in which case it denotes existence in relation to that predicate; existence, the character of which is to be explained by the word with which the substantive verb is connected; to be; to continue, to remain; to be present in a place; to happen in a particular way; to happen according to ordination or appointment; to become; to aim; with various other shades of meaning. Ranking as a copula or apposition verb, now technically viewed as one of incomplete predication (see Bain's *Higher Eng. Gram.*), it is followed by a nominative in apposition with it, and not with an objective as would be the case were it a transitive verb. Thus in the example from Acts xii. 15, given below, "It is his angel," the noun *angel* is in the nominative and not in the objective case.

¶ *Be* is defective, the omissions being supplied by parts from other verbs not in the least resembling it in sound, as *am*, *art*, *are* (from A. S. *eom*=to be), *were*, *was* (from A. S. *wesan*=to be). [BEAND, IS.]

1. In a general sense, in which case it may be joined with an adjective, an adverb, a substantive, a pronoun, &c.

" . . . I was envious at the foolish."—*Ps.* lxxiii. 3.

" . . . lo, he is there . . ."—*Mark* xiii. 21.

" . . . it is his angel."—*Acts* xii. 15.

" . . . Lord, is it I?"—*Matt.* xxvi. 22.

2. Specially: As an auxiliary verb. Used—

(a) Before a past (properly a perfect) participle, so as to constitute the passive voice.

"Blessed shall *be* thy basket and thy store."—*Deut.* xviii. 5.

(b) Before the present (properly the imperfect) participle, so as to constitute a form of the active, implying that an action has commenced to be performed, that the doing of it is in progress, but is not yet completed.

" . . . the oxen *were* plowing, and the asses feeding beside them."—*Job* i. 14.

II. In an abstract sense denoting simple existence. This is the reason why it is called the substantive verb. If the being existent be a living one, then the substantive verb denotes to live.

"To *be* or *not* to *be*, that is the question."

Shakesp.: *Hamlet*, iii. 1.

III. Special phrases:

1. **Be als mekil*=forasmuch.

"Alle so it is ordeyned, be on assent of the brethren, *be als mekil* as the lyght fornsiede ne may nout be meynated in the tyme for to come."—*English Gilds* (Ear. Eng. Text Soc.), pp. 49, 50.

2. *Be it so*=let it be so. A phrase used (a) by one giving authority to do anything which he has the power to permit or refuse to have done, or (b) by one conceding what an opponent in argument has demanded.

"My gracious duke,
Be't so she will not here, before your grace,
Consent to marry with Demetrius."

Shakesp.: *Midsummer Night's Dream*, ii. 1.

3. *Let be*=let alone, leave unmeddled with.

"*Let be*, said he, my prey."—*Dryden*.

¶ The following examples illustrate how interchangeably *be*, *bi*, and *ben* were once used:

(a) *Be*, used where *been* would now be employed.

"Fenyeand ane oblatione, as it had *be*
For prosper returnyng hame in thare cuntré."

Douglas: *Virgil*, 39, 10.

(b) *Ben* (=beon) for *be*.

"A manly man, to *ben* an abbot able."

Chaucer: *C. T.*, Prolog. 167.

Be was also used where we now employ *are*.

"*Be* they better than these kingdoms?"—*Amos* vi. 2.

It was also used in O. Scotch for *let* or *let be*=not to mention, not to speak of, to except. (*Jamieson*.)

¶ (a) Crabb thus distinguishes between the verbs *to be*, *to exist*, and *to subsist*: "To *be* is applicable either to the accidents of things, or to the substances themselves; to *exist* only to substances or things that stand or *exist* of themselves. We say of qualities, of forms, of actions, of arrangement, of movement, and of every different relation, whether real, ideal, or qualificative, that they *are*; we say of matter, of spirit, of body, and of all substances, that they *exist*. Man *is* man, and will *be* man under all circumstances; he *exists* under every known climate, &c. Of *being* and *existence* as nouns, the former not only designates the abstract action of *being*, but is metaphorically employed for the sensible object that is; the latter is confined altogether to the abstract sense. Hence, human *beings*; *beings* animate and inanimate; the supreme *Being*; but the *existence* of a God, of innumerable worlds, of evil. *Being* may in some cases be indifferently employed for *existence*, particularly in the grave style; when speaking of animate objects, as the *being* of a God; our frail *being*; and when qualified in a compound form is preferable, as our *well-being*. *Subsist* is properly a species of *existing*; it denotes temporary or partial *existence*. Every thing *exists* by the creative and preservative power of the Almighty; that which *subsists* depends for its *existence* upon the chances and changes of this mortal life. To *exist* therefore designates simply the event of *being* or *existing*; to *subsist* conveys the accessory ideas of the mode and duration of *existing*. Man *exists* while the vital or spiritual part of him remains; he *subsists* by what he obtains to support life."

(b) To *be*, to *become*, to *grow*, are thus discriminated: "*Be* is positive; *become* is relative: a person *is* what he *is* without regard to what he *was*; he *becomes* that which he *was not* before. We judge of a man by what he *is*, but we cannot judge of him by what he will *become*. To *become* includes no idea of the mode or circumstance of its *becoming*; to *grow* is to *become* by a gradual process: a man may *become* a good man from a vicious one, in consequence of a sudden action on his mind; but he *grows* in wisdom and virtue by means of an increase in knowledge and experience." (Crabb: *Eng. Synon.*)

4. Denoting causation or generation, as *beget* compared with *get*; or converting a simple verb generally intransitive into a transitive one, as to *moan*, to *bemoan* one's hard lot.

5. Adding intensity to a simple verb, though in some cases the meaning seems scarcely altered. It is difficult to say how much or how little intensity is added in the case of each of the words *bedeafen*, *bedraggle*, *begrudge*, and *becalm*, as compared with *deafen*, *draggie*, *grudge*, and *calm*. Prof. Craik, *Eng. of Shakespeare*, considers that in most cases *be* is the relic of the prefix *ge*, which was the favorite and most distinguishing peculiarity of the language in what is called "the Anglo-Saxon period."

"Swinish gluttony,
Ne'er looks to heaven amidst his gorgeous feast,

Crams, and blasphemes his feeder."

bēam (1), ***bēame, *bēem, *bēme, *bēm, *bealme, s.** [A. S. *beam*=(1) a tree; (2) a beam-post, a stock of a tree, a splint; (3) anything proceeding in a straight line, a sunbeam; (4) a wind instrument, a horn, a trumpet (*Bosworth, &c.*). O. I. Ordinary language:

*1. *Of trees*: A tree, i. e. one living, and not dead and cut up. The same as the Ger. *baum*. (See etym.) This sense of the word is obsolete, except in the compound *Horn-beam* ("horn-tree") (q. v.). (*Trench*.)

2. *Of wood from trees, or anything similar*:

(1) A large, long piece of timber "squared" or rather made rectangular on its several sides; specially one used to aid in supporting the ordinary rafters in a building. It is distinguished from a block by being longer than broad.

"A *beam* is the largest piece of wood in a building, which always lies across the building or the walls, serving to support the principal rafters of the roof, and into which the feet of the principal rafters are framed. No building has less than two *beams*, one at each head. Into these the girders of the garret floor are also framed; and if the building be of timber, the teazel-tenons of the posts are framed. The proportions of *beams*, in or near London, are fixed by Act of Parliament. A *beam* fifteen feet long must be seven inches on one side its square, and five on the other; if it be sixteen feet long, one side must be eight inches, the other six, and so proportionable to their lengths."—*Builder's Dictionary*.

"For many a busy hand toiled there,
Strong pales to shape and *beams* to square."

Scott: Lay of the Last Minstrel, v. 9.

In Matthew vii. 3-5 the word is used in this sense. The expression was made designedly hyperbolic, that the dullest perception might discern the meaning.

(2) A similar support to rafters, though made of iron and not of wood.

(3) The pole of a carriage which passes between the horses.

"Juturna heard, and seiz'd with mortal fear,
Forc'd from the beam her brother's charioteer."

Dryden: Virgil; Æneid xii. 687, 688.

(4) The transverse iron rod or bar in a balance, from the extremities of which the scales are suspended.

¶ It is a question whether *beam*, in the sense No. 4, is not a distinct word; but in A. S. it is the same as *beam*=wood. (See etym.) In Latin, also, the somewhat corresponding word *radius* is=staff, a rod, i. e. a ray, a beam of light.

Ger. *pōnā*; Russ. *bob*; Gael. *ponar*; Ir. *ponaire*; Wel. *ffae*; Lat. *faba*. All these words, though many of them so dissimilar to each other, are considered to be etymologically connected.]

A. As substantive:

I. Botany and Horticulture:

1. A well-known cultivated plant, *Vicia faba* of Linnaeus, now called *Faba vulgaris*. It belongs to the order Leguminosæ. The stem is quadrangular and hollow; the leaves are alternate; they are pinnate with two to four leaflets. The flowers, which are fragrant, are papilionaceous, white, with violet-colored veins and blotches looking almost black. The seeds are partly kidney-shaped. The native country of *Faba vulgaris* is believed to be the regions near the Caspian Sea, the Levant, and Egypt. The word *bean* occurs twice in Scripture (in 2 Sam. xvii. 23, and Ezek. iv. 9). The Hebrew term is *pūl*, Septuagint Greek, *kuamos* (see etymology), and seems correctly translated. Pythagoras and his followers would not eat it, and the flamen Dialis, or priest of Jupiter at Rome, was forbidden to touch it. *Faba vulgaris* may be primarily divided into the Garden Bean and the Field Bean. Of the former there are numerous sub-varieties. The earliest is the Mazagan, which is small-seeded; while the largest is the Windsor. The Field Bean runs into two leading sub-varieties, a larger and a smaller one; the latter is called Ticks. The horse-bean is the variety *equina*.

2. (*Popularly.*) Any leguminous plant resembling a bean, though not of the genuine genus *Faba*. Such, for example, as the Florida bean, which is the seed, not the fruit, of a West Indian plant. These seeds washed up on the Florida shore and are sometimes used as food, and sometimes they are polished and used as ornaments. The Navy bean is the common white bean, used largely as an article of diet by sailors. The Pea bean is a small white bean used commonly as food. The Tonquin bean is the fragrant seed of a leguminous tree.

3. (*Popularly.*) Any plant with some vague resemblance to a bean in fruit, even though it be not even leguminous. Thus the Buck Bean, *Menyanthes trifoliata*, is properly of the Gentian order, and has no real affinity to *Faba*. [BUCK-BEAN.]

II. Commerce, &c.: The name given to the seeds of certain plants belonging to the natural order Leguminosæ. The Common Field Bean is the seed of the *Faba vulgaris*, the Broad or Windsor Bean, being a cultivated variety of the same plant. The French or Haricot Bean is the seed of *Phaseolus multiflorus*, and the Scarlet Runner (which is closely akin to the former) is *Phaseolus vulgaris*.

Beans are used for feeding horses, as also for fattening hogs. When fresh they also sometimes appear at table as a culinary vegetable. Scarlet-runners and French beans are used in the pod, in the green state, and eaten as a vegetable. Bean-meal, which is more easily digested than whole beans, contains twice as much nitrogenous matter as wheat-flour, and is more nutritious. It is sometimes used to adulterate flour and bread, but this can be readily detected by the microscope. The cells of the bean are larger, and the cell-walls much thicker, than those of the wheat. The starch granules are also different, being oval or kidney-shaped, and having an irregular, deep cleft down the center. Roasted beans are sometimes used to adulterate coffee.

B. Attributively: Pertaining to the bean; consisting of plants allied to the bean.

"Order CX.: Leguminosæ or Fabaceæ, the Bean Tribe."—*Lindley: Nat. Syst. Bot.*, 2d ed. (1836), p. 148.

¶ (a) Crabb thus distinguishes between to bear and to yield: "Bear conveys the idea of creating within itself; yield, that of giving from itself. Animals bear their young; inanimate objects yield their produce. An apple-tree bears apples; the earth yields fruits. Bear marks properly the natural power of bringing forth something of its own kind; yield is said of the result or quantum brought forth. Shrubs bear leaves, flowers, or berries, according to their natural properties; flowers yield seeds plentifully or otherwise as they are favored by circumstances."

(b) To bear, to carry, to convey, and to transport are thus discriminated: "To bear is simply to put the weight of any substance upon one's self; to carry is to remove it from the spot where it was; we always bear in carrying, but not vice versa. That which cannot be easily borne must be burdensome to carry. Since bear is confined to personal service, it may be used in the sense of carry, when the latter implies the removal of anything by any other body. The bearer of a letter or parcel is he who carries it in his hand; the carrier of parcels is he who employs a conveyance. Convey and transport are species of carrying. Carry in its particular sense is employed either for personal exertions or actions performed by the help of other means. Convey and transport are employed for such actions as are performed not by immediate personal intervention or exertion: a porter carries goods on his knot; goods are conveyed in a wagon or cart; they are transported in a vessel. Convey expresses simply the mode of removing; transport annexes the ideas of place and distance. Merchants get conveyed into their warehouses goods which have been transported from distant countries." (*Crabb: Eng. Synon.*)

beär (2), v. t. [BEAR, s., II. 1.]

On the Stock Exchange: A cant phrase meaning to attempt to depress the price of stock.

beär (1), *bêare, *bêre, *bê-öre, s. [A. S. *bera* = bear; Dut. *beer*; Ger. *bär*; M. H. Ger. *ber*; O. H. Ger. *bero*, *pero*; Icel. & Sw. *biörn*, *björn*; Lat. *fera* = a wild beast.]

I. Ordinary Language:

1. Literally:

(1) *Zool.*: The English name of the various species of Plantigrade mammals belonging to the *Ursus* and some neighboring genera. The term

plantigrade, applied to the bears, intimates that they walk on the soles of their feet; not, like the digitigrade animals, on their toes. Though having six ineisor teeth in each jaw, like the rest of the Carnivora, yet the tubercular crowns of the molar teeth show that their food is partly vegetable. They grub up roots, and, when they can obtain it, greedily devour honey. They hibernate in winter. The best-known species is *Ursus arctos*, the Brown Bear, the one sometimes seen dancing to the amusement of children in the streets. They are wild in this country, on the continent of Europe, and in Asia. Other species are the Syrian Bear (*Ursus Syriacus*, which is the bear of Scripture); the American Black Bear (*U. Americanus*); the Grizzly Bear of the same continent (*U. ferox*); and the Polar Bear, *U. or Thalassarctos maritimus*, and others.

"... they be chafed in their minds, as a bear robbed of her whelps in the field."—*2 Sam.* xviii. 8.

(2) Palæontology:

(i.) *The Family Ursidæ*. The earliest representative of the Ursidæ, or Bear family, known at present, does not belong to the typical genus *Ursus*. It is called *Amphicyon*, and is of Miocene age.

(ii.) *The Genus Ursus*. Of the True Bears belonging to the *Ursus* genus none have as yet been found earlier than the Pliocene.

(a) *Pliocene Bears*. The best-known species is *Ursus arvernensis*.

(b) *Post-pliocene Bears*. One of these, *Ursus priscus*, seems the same as *U. ferox* (the Grizzly Bear). [A., I. 1.] Several bears, *Ursus spelæus*, *arctos*, and others, have been found in caves in England and elsewhere. Of these, *U. spelæus*, from Gr. *spelaios* = a grotto, cave, cavern, or pit, is the one called specially the Cave-bear. It is a giant species, occurring in the later rather than the earlier Post-pliocene beds. (*Nicolson: Palæont., &c.*)

2. Figuratively:

(a) A person brave, fierce, and rough in his treatment of others, whom one holds in his control.

"York. Call hither to the stake my two brave bears,
That with the very shaking of their chains
They may astonish these fell lurking curs:
Bid Salisbury and Warwick come to me."

(Enter the Earls of Warwick and Salisbury.)

Clif. Are these thy bears? we'll bait thy bears to death,
And manacle the bear-ward in their chains,
If thou darest bring them to the baiting-place."

Shakesp.: 2 Henry VI., v. 1.

(b) *The Northern Bear*: Russia. The points of resemblance are probably that, like the Polar Bear, its habitat is far north amid snow and ice; its aspect is shaggy, and those who meddle with it are apt to perish in its fatal embrace.

II. Technically:

1. *On the Stock Exchange*: A cant phrase for one who contracts to sell on a specified day certain stock not belonging to him, at the market price then prevailing, on receiving imaginary payment for them at the rate which obtains when the promise was made. It now becomes his interest that the stock on which he has speculated should fall in price; and he is tempted to effect this end by circulating adverse rumors regarding it; while the purchaser, called a "bull," sees it to his advantage to make the stock rise. The origin of the term is uncertain. Dr. Warton derives it from the proverbial expression of selling the skin before the bear is caught, but he does not assign any explanation to the contrary term *bull*; others point out that the action of the former is like that of a bear pulling down something with his paws, while that of the latter is suggestive of a bull tossing a person up with his horns. [BULL.]

2. *Astron.*: One or other of two constellations, *Ursa Major* and *Ursa Minor*, called respectively the Great Bear and the Little Bear. [URSA.] When the word *Bear* stands alone, it signifies *Ursa Major*.

"E'en then when Troy was by the Greeks o'erthrown,
The Bear oppos'd to bright Orion shone."—*Creech*.

bear-berry, s. The English name of the *Arctostaphylos*, a genus of plants belonging to the order *Ericaceæ* (Heathworts). It includes the two species, *Arctostaphylos Uva ursi* and *A. alpina*. The former is used in nephritic and calculous cases, and sometimes

We never *beat* but with design, nor *hit* without an aim, but we may *strike* by accident. It is the part of the strong to *beat*; of the most vehement to *strike*; of the most sure-sighted to *hit*."

(b) To *beat*, to *defeat*, to *overpower*, to *route*, and to *overthrow* are thus discriminated: "To *beat* is an indefinite term expressive of no particular degree: the being *beaten* may be attended with greater or less damage. To be *defeated* is a specific disadvantage; it is a failure in a particular object of more or less importance. To be *overpowered* is a positive loss; it is a loss of the power of acting which may be of longer or shorter duration. To be *routed* is a temporary disadvantage; a *route* alters the course of proceeding, but does not disable. To be *overthrown* is the greatest of all mischiefs, and is applicable only to great armies and great concerns; an *overthrow* commonly decides a contest. *Beat* is a term which reflects more or less dishonor on the general or the army, or on both. *Defeat* is an indifferent term; the best generals may sometimes be *defeated* by circumstances which are above human control. *Overpowering* is coupled with no particular honor to the winner, nor disgrace to the loser; superior power is oftener the result of good fortune than of skill; the bravest and finest troops may be *overpowered* in cases which exceed human power. A *route* is always disgraceful, particularly to the army; it always arises from want of firmness. An *overthrow* is fatal rather than dishonorable; it excites pity rather than contempt." (Crabb: *Eng. Synon.*)

Longfellow: The Song of Hiawatha, ii.

(2) Of anything in art or in nature tastefully colored, finely symmetrical, or both.

"Awake, awake; put on thy strength, O Zion; put on thy *beautiful* garments, . . ."—*Isa. lii. i.*

"Although the scenery is nowhere *beautiful*, and only occasionally pretty, I enjoyed my walk."—*Darwin: Voyage round the World*, ch. xviii.

(3) Of anything which finely illustrates a principle. Thus medical men sometimes allow themselves to speak of a "*beautiful* case," meaning one specially worth study, from the light which it throws on physiology or pathology; and they are not deterred from using the term even if the case is one which the untrained eye regards as horrible to behold.

¶ Crabb thus distinguishes between the words *beautiful*, *fine*, *handsome*, and *pretty*: "Of these epithets, which denote what is pleasing to the eye, *beautiful* conveys the strongest meaning; it marks the possession of that in its fullest extent, of which the other terms denote the possession in part only. *Fineness*, *handsomeness*, and *prettiness* are to *beauty* as parts to a whole. When taken in relation to persons, a woman is *beautiful* who in feature and complexion possesses a grand assemblage of graces; a woman is *fine* who with a striking figure unites shape and symmetry; a woman is *handsome* who has good features, and *pretty* if with symmetry of feature be united delicacy. The *beautiful* comprehends regularity, proportion, and a due distribution of color, and every particular which can engage the attention; the *fine* must be coupled with grandeur, majesty, and strength of figure; it is incompatible with that which is small; a little woman can never be *fine*. The *handsome* is a general assemblage of what is agreeable; it is marked by no particular characteristic but the absence of all deformity. *Prettiness* is always coupled with simplicity; it is incompatible with what is large: a tall woman with masculine features cannot be *pretty*. *Beauty* is peculiarly a female perfection; in the male sex it is rather a defect; but though a male may not be *beautiful* or *pretty*, he may be *fine* or *handsome*. When relating to other objects, *beautiful*, *fine*, *pretty*, have a strong analogy; but *handsome* differs too essentially from the rest to admit of comparison. With respect to the objects of nature, the *beautiful* is displayed in the works of creation, and wherever it appears it is marked by elegance, variety, harmony, proportion, but above all, that softness which is peculiar to female *beauty*; the *fine*, on the contrary, is associated with the grand, and the *pretty* with the simple. The sky presents either a *beautiful* aspect, or a *fine* aspect; but not a *pretty* aspect. A rural scene is *beautiful* when it unites richness and diversity of natural objects with superior cultivation; it is *fine* when it presents the bolder and more impressive features of nature, consisting of rocks and mountains; it is *pretty* when, divested of all that is extraordinary, it presents a smiling view of nature in the gay attire of shrubs and many colored flowers and verdant meadows and luxuriant fields. *Beautiful* sentiments have much in them to interest the affections, as well as the understanding; they make a vivid impression. *Fine* sentiments mark an elevated mind and a loftiness of conception; they occupy the understanding, and afford scope for reflection; they make a strong impression. *Pretty* ideas are but pleasing associations or combinations that only amuse for the time being, without producing any lasting impression. We may speak of a *beautiful* poem, although not a *beautiful* tragedy; but a *fine* tragedy, and a *pretty* comedy. Imagery may be *beautiful* and *fine*, but seldom *pretty*." (Crabb: *Eng. Synonyms*.)

I. In the abstract: That quality or assemblage of qualities in an object which gives the eye or the ear intense pleasure; or that characteristic in an object or in an abstraction which gratifies the intellect or the moral feeling.

1. The assemblage of qualities in a person or thing which greatly pleases the eye.

(1) *In a person:*

(a) Manly beauty.

¶ This must be of a kind to suggest that the individual possessing it is endowed with the higher qualities of manhood—intellect, courage, strength of will, and capacity for ruling other men. Rosy cheeks and faultless symmetry of feature do not constitute manly beauty if they are of a kind to suggest that the person possessing them is effeminate in character.

"But in all Israel there was none to be so much praised as Absalom for his *beauty*; from the sole of his foot even to the crown of his head there was no blemish in him."—*2 Sam. xiv. 25*.

(b) Womanly beauty.

¶ This must indicate that the person possessing it belongs to a high type of woman, with no commingling of masculine characteristics. In this case the excellences to be looked for are faultless symmetry of form and of feature and complexion, varying in hue as the mind is affected by internal emotion, but with an expression of purity, gentleness, sensibility, refinement, and intelligence.

"But if that thou wilt praysen my *beauté*."

Chaucer: C. T., 5,876.

"This was not the *beauty*—Oh, nothing like this,
That to young Nourmahal gave such magic of bliss;
But that loveliness, ever in motion, which plays
Like the light upon autumn's soft shadowy days.

"Now here and now there, giving warmth as it flies
From the lips to the cheek, from the cheek to the eyes;
Now melting in mist, and now breaking in gleams
Like the glimpses a saint has of heaven in his dreams."
Moore: L. R.; Light of the Haram.

(c) Similarly, boyish beauty must suggest that the person possessing it is of the highest type of boyhood, girlish beauty of girlhood, and childish beauty of childhood. To approach perfection each type must be itself and no other.

(2) *In one of the inferior animals:* This consists of color, symmetry, form, grace, and everything else that shows the adaptation of the structure of the animal to the purposes of its being.

" . . . yet both must fail in conveying to the mind an adequate idea of their surpassing *beauty* [that of the Trochilidae, or Humming Birds]. The rainbow colors of the most resplendent gems are here superadded to a living form, which in itself is exquisitely graceful and animated in all its movements; the flight of these pigmy birds is so rapid as to elude the eye . . ."—*Swainson: Birds*, ii. 147.

(3) *In a place or thing:* This consists of color, symmetry, and adaptation to the end for which it was erected or made.

"The uncertain glory of an April day"

Which now shows all the *beauty* of the sun,
And by and by a cloud takes all away."

Shakesp.: Two Gentlemen of Verona, i. 3.

2. The assemblage of qualities in an object which are fitted to inspire analogous though not identical pleasure to the ear.

"Recognizing the simple æsthetic pleasure derivable from rhythms and euphony, . . . the feelings of *beauty* yielded by poetry are feelings remotely represented."—*Herbert Spencer: Psychol.*, p. 642.

3. That characteristic in an object or in an abstract conception which gratifies the intellect.

"With incredible pains have I endeavored to copy the several *beauties* of the ancient and modern historians."—*Arbuthnot*.

4. That characteristic in an object, in an action, or in an abstract conception which gratifies the moral feeling. This is generally called moral beauty.

"He hath a daily *beauty* in his life

That makes me ugly, . . ."

Shakesp.: Othello, v. 1.

II. In the concrete: A person or thing fitted to inspire the delight referred to under No. 1.

1. A person or persons fitted to do so. *Specially—*
(a) A beautiful woman, individually.

"Patroclus now th' unwilling *beauty* brought."

Pope: Homer's Iliad, bk. i., 450.

(b) The same, taken collectively.

"And Belgium's capital had gathered then
Her *Beauty* and her Chivalry, and bright
The lamps shone o'er fair women and brave men."

Byron: Childe Harold, iii. 21.

2. A thing or things attractive to the eye, to the ear, or to the love of order, symmetry, and grace existing in the mind.

"The *beauties* of that country are indeed too often hidden in the mist and rain . . ."—*Macaulay: Hist. Eng.*, ch. xii.

beauty-beaming, a. Beaming with beauty.

[CASTOR.] The animal so designated has in each jaw two powerful incisor teeth, coated with hard enamel, by means of which it is enabled to cut across the trunks of the trees which it requires for its engineering schemes. [BEAVER-DAM.] The hind feet are webbed, and one of the five toes has a double nail. The tail is flattened horizontally, and covered with scales. Large glandular pouches secrete an odoriferous substance called Castoreum, much prized by the ancients, who regarded it as of high medical value. [CASTOREUM.] The *Castor fiber* exists through the temperate and colder parts of this country. "The author expressed his belief that the deposits indicated, at places, the effects of beaver-works, tracts of forest having been, to all appearance, submerged and destroyed by the action of *beaver-dams*."—H. Woodward, in *Brit. Assoc. Rep.* for 1869, pt. ii., p. 104.

beaver-house, *s.* A "house" built by a beaver. It is made of wood, mud, and stones. While the beavers inhabiting "houses" are social, the terriers are solitary.

Since my *becomings* kill me when they not

Shakesp.: *Antony and Cleopatra*, i. 3.

¶ (a) Crabb thus distinguishes the terms *becoming*, *decent*, *fit*, and *suitable*: "What is *becoming* respects the manner of being in society, such as it ought, as to person, time, and place. *Decency* regards the manner of displaying one's self, so as to be approved and respected. *Fitness* and *suitableness* relate to the disposition, arrangement, and order of either being or doing, according to persons, things, or circumstances. The *becoming* consists of an exterior that is pleasing to the view; *decency* involves moral propriety; it is regulated by the fixed rules of good breeding; *fitness* is regulated by local circumstances, and *suitableness* by the established customs and usages of society. The dress of a woman is *becoming* that renders her person more agreeable to the eye; it is *decent* if it no wise offend modesty; it is *fit* if it be what the occasion requires; it is *suitable* if it be according to the rank and character of the wearer. What is *becoming* varies for every individual; the age, the complexion, the stature, and the habits of the person must be consulted in order to obtain the appearance which is *becoming*; what *becomes* a young female, or one of fair complexion, may not *become* one who is farther advanced in life, or who has dark features. *Decency* is one and the same for all; all civilized nations have drawn the exact line between the *decent* and *indecent*, although fashion may sometimes draw females aside from this line. *Fitness* varies with the seasons, or the circumstances of persons; what is *fit* for the winter is *unfit* for the summer, or what is *fit* for dry weather is *unfit* for the wet; what is *fit* for town is not *fit* for the country; what is *fit* for a healthy person is not *fit* for one that is infirm. *Suitableness* accommodates itself to the external circumstances and conditions of persons; the house, the furniture, the equipage of a prince, must be *suitable* to his rank; the retinue of an ambassador must be *suitable* to the character which he has to maintain, and to the wealth, dignity, and importance of the nation whose monarch he represents."

(b) *Becoming*, *comely*, and *graceful* are thus discriminated: These epithets "are employed to mark in general what is agreeable to the eye. *Becoming* denotes less than *comely*, and this less than *graceful*; nothing can be *comely* or *graceful* which is *unbecoming*; although many things are *becoming* which are neither *comely* nor *graceful*. *Becoming* respects the decorations of the person, and the exterior deportment; *comely* respects natural embellishments; *graceful*, natural or artificial accomplishments: manner is *becoming*; figure is *comely*; air, figure, or attitude is *graceful*. *Becoming* is relative; it depends on taste and opinion, on accordance with the prevailing sentiments or particular circumstances of society. *Comely* and *graceful* are absolute; they are qualities felt and acknowledged by all." (*Crabb: Eng. Synon.*)

bě-côm-ing-lý, *adv.* [Eng. *becomingly*; *-ly*.] In a becoming manner; suitably, properly, befittingly.

The substances emitting these rays are found in the ore of oxide of uranium, and are named, respectively, polonium, radium, and actinium. The rays were discovered in 1896 by M. The term *bed* sometimes excludes and sometimes includes the bedstead. In India, and other Eastern countries, the bed of a native, at least on his travels, is simply a mat, a rug, or a bit of old carpet; his bed-clothes are his scarf or plaid. "Bed" and bed-clothes he has no difficulty in carrying with him as he goes.

They made it a hospital for lunatics. In 1676 the original buildings were superseded by those of the "New Hospital of Bethlehem," erected near London Wall, the original one being thenceforward known as "Old Bethlehem." Finally, in 1815, the hospital was transferred to Lambeth.

I. Literally:

1. *Spec.:* The well-known insect half domesticated for honey-making in hives. It is the *Apis mellifica*, Linn., and is still found wild or escaped from man's control in Russia, in portions of Asia, in Italy, and in France. Bees are social insects. Their societies consist of three classes—neuters, females, and males. The first-named are abortive females, and do all the work of the society; they are armed with a sting, and their larvæ, if treated

with specially rich food, can develop into perfect females. The solitary female in the hive is popularly called a queen; she is fecundated in the air, and then deposits her eggs in hexagonal combs which the workers have prepared for the purpose. The eggs are hatched into maggot-like larvæ, which are fed on a mixture of wax and honey, are then shut by the workers into the cell, which they inclose with a lining, and finally emerge as perfect insects. A single female will produce in a year from 12,000 to 20,000 bees, of which all but about 3,000 die at the

approach of winter. The males are called drones. A well-peopled hive will contain from 200 to 800 of them. Being destitute of a sting, they have not the power of defending themselves, and after their appropriate function has been performed, they are remorselessly put to death by the workers. When bees become too numerous in a hive, a fresh queen is nurtured, under whose auspices they swarm.

"And bees in hives as idly wait The call of early Spring."

Cowper: *To the Rev. Mr. Newton*.

2. *Gen.:* Any insect of a similar structure to the hive-bee, as the Humble Bees, the Carpenter Bees, the Mason Bees, solitary bees in general. In the same sense the plural *bees* is the technical English name for the section of the hymenopterous order Anthophila (q. v.).

II. Figuratively:

2. Compare in Sw. *biffin*, *biff-stek*, and Dut. *biefin*, *bief-stuk*=Eng. *beef-steak*. A word introduced by the Normans. Trench directs attention to the fact that while in English the domestic animals, as long as they are living, are called by Saxon names, their flesh, after they are dead, has, as a rule, some Norman appellation, as if the Saxons had tended them while living, and the Normans eaten them when dead. "Thus," he says, "*ox*, *steer*, *cow*, are Saxon, but *beef* Norman; *sheep* is Saxon, but *mutton* Norman. So it is severally with *swine* and *pork*, *deer* and *venison*, *fowl* and *pullet*. *Bacon*, the only flesh which perhaps ever came within his (the Saxon's) reach, is the single exception." (*Trench: The Study of Words.*)] (See also Scott's *Ivanhoe*.)

A. As substantive:

1. An ox, a cow, or a bull, regarded as fit for food. ¶ In this sense it has a plural, *beeves*.

"Alcinous slew twelve sheep, eight white-tooth'd swine,
Two crook-haunched beeves." Chapman.

2. The flesh of the ox or the cow, used either fresh or salted. It is the most nutritious of all kinds of meat, and is well adapted to the most delicate constitutions. It should be well cooked, as it has been proved that underdone beef frequently produces tapeworm. Good beef is known by its having a clear uniform fat, a firm texture, a fine open grain, and a rich reddish color. Meat which feels damp and clammy should be avoided, as it is generally unwholesome. Fresh beef loses in boiling 30 per cent. of its weight; in roasting it loses about 20 per cent. The amount of nitrogenous matter found to be present in one pound of good beef is about four ounces. In the raw state it contains 50 per cent. of water. [Ox.]

"The fat of roasted beef falling on birds will baste them."—Swift.

Probably signifying *lord of dung*, the *dung-god*. A contemptuous appellation for *Beelzebub*, the god of Ekron [BEELZEBUB], which may, moreover, have been, as Hug suggests, a dung-rolling scarabæus beetle, like that worshiped by the Egyptians.

A. As substantive: A fermented aqueous infusion of malt and hops, or of malt, sugar, and hops. The term is now applied to all malt liquors prepared by the process of brewing.

Beers are divided into two great classes, ales and porters, the former being chiefly prepared from pale malt, and having a pale amber color, while in the preparation of the latter a certain proportion of roasted or black malt is used along with the pale malt. This increases the color, and gives to the porter a somewhat bitter flavor. These two classes are subdivided into a great many varieties, depending on the strength of the wort used and the amount of hops added. Thus we have pale ale, mild ale, bitter ale, barley wine, table beer, &c. Stout, brown stout, double brown stout, &c., are merely richer and stronger kinds of porter.

Genuine beer should consist of water, malt extract (dextrine and glucose), hop extract, and

alcohol. The quantity of alcohol in beer varies from two per cent. in table beer to ten or even twelve per cent. in strong ale, and the extract from three to fifteen per cent., the latter giving to the beer its nutritive value. The alcohol present always bears a relation to the amount of sugar fermented. A good sound beer should be perfectly transparent, and have a brilliant color and a pleasant flavor. Sour beers and beers that are thick are very unwholesome.

In England the adulteration of ale or beer is subjected to a serious fine. The Act 56 George III., cap. 58, imposes a penalty of £200 (\$1,000) on any brewer or publican who shall have in his possession, or who shall sell adulterated beer, and a further penalty of £500 (\$2,500) on any druggist or other person who shall sell any adulterant to a licensed brewer. Notwithstanding the stringency of this act, beer has been, and still is, very largely adulterated. The nitrogenous matter extracted from the malt, and present in the original beer, is reduced to a minimum, and the beer-drinker pays for a liquor which may be sweet and pleasant to the taste, but is almost destitute of nourishment. Salt is added, not so much to preserve the beer, as to increase the thirst, and thereby impart a craving for more drink. *Cocculus indicus*, picric acid, strychnine, and opium, said to be adulterants, are now seldom, if ever, used to adulterate beer.

"Flow, Welsted! flow, like thine inspirer beer!
Tho' stale, not ripe; tho' thin, yet ever clear;
So sweetly mawkish, and so smoothly dull;
Heady, not strong; and foaming, tho' not full."
Pope: *Dunciad*, bk. iii., 169-172.

A. Intransitive: To ask for alms, *spec.*, to ask habitually; to be a professional beggar, to be a mendicant.

B. Transitive:

I. Ordinary Language:

Becomes as aged, and doth beg the alms

Of palsied old ..."

Shakesp.: Measure for Measure, iii. 1.

¶ There is a play upon the words *beg you for* in the following passage:

"And that a great man

Did mean to beg you for—his daughter."

City Match (O. Pl.), 314. (*Nares*.)

¶ (a) Crabb thus distinguishes between the verbs to beg and to desire: "To beg marks the wish; to desire, the will and determination. Beg is the act of an inferior; desire, of a superior. We beg a thing as a favor, we desire it as a right."

(b) To beg, beseech, solicit, entreat, supplicate, implore, crave are thus discriminated: The first four of these do not mark such a state of dependence in the agent as the last three: to beg denotes a state of want; to beseech, entreat, and solicit a state of urgent necessity; supplicate and implore, a state of abject distress; crave, the lowest state of physical want. One begs with importunity; beseeches with earnestness; entreats by the force of reasoning and strong representation. One solicits by virtue of one's interests; supplicates by a humble address; implores by every mark of dejection and humiliation. Begging is the act of the poor when they need assistance; beseeching and entreating are resorted to by friends and equals, when they want to influence or persuade; beseeching is more urgent, entreating more argumentative. Solicitations are used to obtain favors which have more respect to the circumstances than the rank of the solicitor; supplicating and imploring are resorted to by sufferers for the relief of their misery, and are addressed to those who have the power of averting or increasing the calamity. Craving is the consequence of longing; it marks an earnestness of supplication, an abject state of suffering dependence.

One whose habitual practice is to implore people for alms, whether because he has some physical or mental defect which wholly or partially incapacitates him from working; or because (if such a thing be conceivable) all his efforts to obtain work have been uniformly abortive; or finally, in too many cases, because he is too idle to work and too shameless to blush at the meanness of casting his support on others perhaps less strong in body, and even less rich in purse, than himself.

B. *Old Law and Ord. Lang.* *Sturdy beggar*: An able-bodied man quite capable, if he liked, of working, but who will not do it because he prefers to quarter himself upon the industrious. The Act 14 Eliz., c. 5, passed in 1572, defined rogues, vagabonds, and sturdy beggars to be "all persons whole and mighty in body, able to labor, not having land or mister, nor using any lawful merchandise, craft, or mystery." These, and coupled with them, unhappily, "all common laborers able in body, loitering and refusing to work for such reasonable wage as is commonly given"—that is, what now would be called all agricultural or other laborers on strike—were, for the first offense, to be grievously whipped and be burned through the gristle of the right ear with a hot iron an inch round; for the second should be deemed felons; and for the third suffer death, without benefit of clergy. The cruel severity of the Act made it fail of effect. The sturdy beggar continued to flourish; he does so still. He may be seen daily almost anywhere, not to say everywhere, in New York or Chicago; and as long as the thoughtless continue to give him alms in the street, there is no likelihood of his condescending to work.

(a) The "tertiaries" of the Franciscans. By the third rule of St. Francis, those might have a certain loose connection with this order, who, without forsaking their worldly business, or forbearing to marry, yet dressed poorly, were continent, prayerful, and grave in manners. In France they were called *Beguini*, and in Italy *Bizochi* and *Bocasoti*. They were greatly persecuted by successive popes. (*Mosheim.*)

(b) Certain religious people who associated themselves into a kind of monastic lodging-house under a chief, while they were unmarried, retiring when they pleased. As they often supported themselves by weaving, they were sometimes called "Brother Weavers." They first attracted notice in the Netherlands in the thirteenth century. They were established at Antwerp in 1228, and adopted the third rule of St. Francis in 1290. (*Mosheim.*)

¶ *To begin with*: To commence with; to select any particular person or thing as the first of a series.

"A lesson which requires so much time to learn, had need be early begun with."—*Govern. of the Tongue.*

¶ Crabb thus distinguishes the verbs to *begin*, to *commence*, and to *enter upon*: "*Begin* and *commence* are so strictly allied in signification, that it is not easy to discover the difference in their application, although a minute difference does exist. To *begin* respects the order of time; to *commence*, the exertion of setting about a thing. *Begin* is opposed to *end*; *commence*, to *complete*: a person *begins* a thing with a view to ending it; he *commences* with the view of completing it. To *begin* is either transitive or intransitive; to *commence* is mostly transitive: a speaker *begins* by apologizing; he *commences* his speech with an apology. To *begin* is used either for things or persons; to *commence*, for persons only: all things have their *beginning*; in order to effect anything we must make a *commencement*. *Begin* is more colloquial than *commence*: thus we say, to *begin* the work, to *commence* operations. To *commence* and *enter upon* are as closely allied in sense as the former words; they differ principally in application: to *commence* seems rather to denote the making an experiment; to *enter upon*, that of first doing what has not been tried before: we *commence* an undertaking; we *enter upon* an employment." (*Crabb: Eng. Synon.*)

"*Behavior* respects all actions exposed to the notice of others; *conduct*, the general line of a person's moral proceedings: we speak of a person's *behavior* at table or in company, in a ball-room, in the street, or in public; of his *conduct* in the management of his private concerns, in the direction of his family, or in his different relations with his fellow-creatures. *Behavior* applies to the minor morals of society; *conduct*, to those of the first moment: in our intercourse with others we may adopt a civil or polite, a rude or boisterous, *behavior*; in our serious transactions we may adopt a peaceable, discreet, or prudent, a rash, dangerous, or mischievous *conduct*. A *behavior* is good or bad; a *conduct* is wise or foolish." "*Carriage* respects simply the manner of *carrying* the body; *deportment* includes both the action and the *carriage* of the body in performing the action; *demeanor* respects only the moral character or tendency of the action; *deportment* is said only of those exterior actions that have an immediate reference to others: *demeanor*, of the general *behavior* as it relates to the circumstances and situation of the individual: the *carriage* is that part of *behavior* which is of the first importance to attend to in young persons." Běh'-ring, Vitus, s. A Danish navigator, who in 1725 commanded a scientific expedition to the sea of Kamchatka, which was afterwards called Behring Sea in his honor. In 1732 he was appointed captain in the Russian navy, and in 1740 he made another voyage to the Kamchatka region. After undergoing many hardships his ship was wrecked on the barren island now bearing his name, where he died November 3, 1741. His discoveries were the foundation of Russia's claim to the vast region of North America, now known as Alaska.

Behring Sea, Bě'-ring Sea, s. [BEHRING, VITUS.] Part of the Northern Pacific Ocean. It lies between Alaska on the east and Siberia on the west, the Aleutian Islands bounding it on the south, while on the north Behring Straits lead to the Arctic Ocean. In the southeast corner of the sea lie the Pribylof Islands, a great haunt of seals from the middle of May to December. The right to slaughter these seals to the number of 100,000, under certain restrictions, is let to the North American Commercial Company by the United States. At certain seasons the seals leave the islands and here arises the opportunity for pelagic sealing, as it is called.

Behring Sea Dispute, s. Alaska was acquired by the United States in 1867 by purchase from Russia. Shortly after its acquisition Canadian sealing vessels became engaged in an illegal and indiscriminate slaughter of the seals in the Alaskan waters known as Behring Sea, or the Bering Sea, threatening their utter extermination. In 1887 and 1889 some of these vessels were seized by United States revenue cutters and thus was brought to an issue the controversy between the United States and Great Britain known as the Behring Sea Dispute. The matter for a time threatened an interruption of the friendly relations existing between the two governments, but was finally amicably settled by submitting the questions involved to international arbitration. The arbitrators met in the office of the French foreign ministry in Paris on the 23d of February, 1893; the voluminous papers and records in the case were submitted and an adjournment was taken for a month. The tribunal reassembled March 23d, the following persons constituting the court: Justice John M. Harlan and Senator John T. Morgan, appointed by the president; Sir James Hannen and Sir John S. D. Thompson (the latter representing Canada), appointed by the queen; Baron de Courcelles, appointed by the president of France; Marquis Emilio Visconti Venosta, appointed by the king of Italy, and Judge Gregorio W. W. Gram, appointed by the king of Sweden and Norway. John W. Foster, ex-secretary of state, acted as agent for the United States and C. H. Tupper as agent of Great Britain. The American counsel was composed of E. J. Phelps, of Vermont, Henry W. Blodgett, of Illinois, James C. Carter, of New York and Frederick R. Coudert, of New York. The counsel for Great Britain consisted of Sir Charles Russell, Sir Richard Webster, Mr. Charles Russell and C. Robinson. Baron de Courcelles was chosen to preside. The printed arguments of the two nations were submitted and the tribunal adjourned to April 4. The case of the United States as submitted filled six large printed volumes, while that of Great Britain comprised eight volumes of equal size. The summary of the claims made for the United States is as follows:

That prior and up to the time of the cession of Alaska to the United States Russia asserted and exercised an exclusive right to the seal fisheries in the waters of Behring Sea, and also asserted and exercised throughout that sea the right to prevent, by the employment, when necessary, of reasonable force, any invasion of such exclusive rights; that Great Britain, not having at any time resisted or objected to such assertions of exclusive right or the exercise of such power, is to be deemed as having recognized and assented to the same; that the body of water now known as the Behring Sea was not included in the phrase "Pacific Ocean," as used in the treaty of 1825 between Great Britain and Russia, and that after said treaty and down to the time of the cession to the United States Russia continued to assert the same exclusive rights and to exercise the same exclusive power and authority as above mentioned. That all the rights of Russia in respect to the seal fisheries in the Behring Sea east of the water boundary established by the treaty of March 30, 1867, between that nation and the United States, and all the power and authority possessed and asserted by Russia to protect said rights, passed unimpaired to the United States under that treaty; that the United States has such a property and interest in the Alaskan seal herd as to justify the employment by the nation, upon the high seas, of such means as are reasonably necessary to prevent the destruction of such herd and to secure the possession and benefit

of the same to the United States; and that all the acts and proceedings of the United States done and had for the purpose of protecting such property and interest were justifiable and stand justified; and that compensation should be made to the United States by Great Britain by the payment of the amount of the losses of the United States or such other sums as may be deemed to be just. That should it be considered that the United States has not the full property or property interest asserted by it, it be then decreed to be the international duty of Great Britain to concur with the United States in the adoption and enforcement against the citizens of either nation of such regulations, to be designed and prescribed by the arbitrators, as will effectually prohibit and prevent the capture anywhere upon the high seas of any seals belonging to said Alaskan seal herd.

On the 15th of August, 1893, the tribunal handed down its decision. Each of the countries interested accepted the result as a partial victory in its behalf. The arbitrators established a zone of sixty miles around the Pribylof Islands, in which it is forbidden at any time to pursue, capture or kill seals. They prohibited the use of firearms in sealing, which practically does away with poaching in the deep sea, as it is impracticable to engage in sealing, except in a small way, without the use of huckshot. They provided for the protection of the herd from the sealers while breeding by the establishment of a close season from May 1 to July 31. This close season is to be observed in the Northern Pacific as well as in the Behring sea, to protect the seals in their passage from the winter quarters across the ocean to their breeding grounds, the Pribylof Islands. This decision was against the earnest contention of Sir Charles Russell, the counsel for Great Britain, who maintained that the Northern Pacific must be free grounds at all seasons for the sealers. Thus far the claims of the United States were favored. On the other side the tribunal decided that pelagic sealing should be permitted outside of the protected zone from August 1. On the five points of article 6 of the treaty of 1892 the finding of the tribunal was against the United States. This article covered the claims to exclusive rights in Behring Sea as obtained by the United States in its Russian purchase. The finding of the tribunal was also against the United States in the matter of the seizure of the Canadian vessels engaged in poaching, and the United States was made liable to damages on account of the seizures. Both Great Britain and the United States have enacted laws for carrying the provisions of the award into effect. June 7, 1894, Great Britain presented a list of the British claims against the United States, amounting to \$542,169, and proposed that a commission examine and pass upon them. The Secretary of State suggested that it might be best to pay a lump sum to Great Britain of \$425,000; this was agreed to by the British ambassador and recommended to Congress by the president. Congress, however, declined to approve the claim on the ground that a great portion of it was for constructive damages, which had not been approved by the tribunal, and its allowance would be against the precedent of the Alabama award, which expressly disallowed constructive damages. But on June 15, 1898, Congress reconsidered the matter and approved the award, and on the following day the sum of \$473,151.26 was paid by the Secretary of State to the British Ambassador in full settlement thereof.

Accadian, Assyrian, and Babylonian Myth.: A “god” mentioned in Scripture, in Isa. xlv. 1; Jer. l. 2; li. 44; in the Septuagint, in Baruch vi. 40, and in the apocryphal additions to the Book of Daniel (BEL AND THE DRAGON), as well as by classical authors. Much new light has recently been thrown on Bel's characteristics and position in the heavenly hierarchy, by the examination of the cuneiform tablets and sculptures. It has been discovered that, prior to 1600 B. C., the highly interesting Turanian people called Accadians, the inventors of the cuneiform writing, who wielded extensive authority in Western Asia before the Semitic Assyrians and Babylonians had come into notice, worshiped as their first triad of gods Anu, ruling over the heaven; Elu, Belu, or Bel, over the earth; and Ea over the sea. Bel's three children, or three of his children, were Shamas, the Sun-god; Sin, the Moon-god; and Ishtar, the Accadian Venus. Sayce shows that some first-born children were vicariously offered in sacrifice by fire to the Sun-god. From the Accadians human sacrifice passed to various Semitic tribes and nations. Bel's name Elu identifies him with the Phœnician El, who, in a time of trouble, offered his first-born son, “the beloved,” on a high place, by fire. It is not settled whether or not Bel was the same also as the Phœnician Baal. To the wrath of Bel the deluge was attributed. In Scripture times he was known exclusively as a Babylonian divinity, being distinguished from both Nebo and Merodach. In the later Babylonian empire, however, Merodach came to be generally identified with Bel, though sometimes distinguished from him, being called “the lesser Bel.” (*Sayce, Bos-cawen, Fox Talbot, Bosanquet, &c., in Trans. Bib. Archaeol. Soc., vols. i.-vi.*)

¶ *Bel* enters as an element into various Babylonian names, as *Belteshazzar*=the Prince of Bel (Daniel i. 7; iv. 8, 9, 19).

Bel and the Dragon, s. One of the books of the Apocrypha, or, more precisely, certain apocryphal chapters added to the canonical Book of Daniel. The Jews consider them as no part of their Scriptures. They were penned probably by an Alexandrian Jew, the language used being not Hebrew, nor Aramæan, but Greek. The Church of Rome accepts Bel and the Dragon as part of the Holy Scripture; most, if not all, Protestant churches reject it. In Roman Catholic worship it is read on Ash Wednesday, and was so in the old lectionary of the English Church on the 23d of November. The new lectionary has it not either on that or any other date. The story of Bel and the Dragon tells how Daniel enlightened Cyrus, who is represented as having been a devout worshiper of Bel, by proving that the immense supplies of food laid before the idol were really consumed, not by it or by the inhabit-

ing divinity, but by the priests and their families. On Cyrus urging that the dragon, also worshiped, was at least a *living* God, Daniel poisoned it, for which he was thrown into a lions' den, where the prophet Habakkuk fed him. Ultimately he was released, and his persecutors put to death.

¶ The above narrative must not be confounded with one called also “Bel and the Dragon,” translated by Mr. Fox Talbot from the cuneiform tablets.

Mr. Talbot believes that the dragon, seven-headed like the one in Revelation, would, if the tablets were complete, prove the same being that seduced some of the heavenly “gods,” or angels, from their allegiance (Rev. xii. 4; Jude 6), for which he was slain by Bel. The resemblance is not to the apocryphal book now under consideration, but to the combat between Michael and the Dragon in Rev. xii. 7-17. (*H. Fox Talbot in Trans. Bib. Archaeol., vol. iv., 1875, p. 349.*)

used only in poetry and in the plural), the same as
belos=a dart, a javelin, from *ballō*=to throw, and
suff. *-ites*, from *lithos*=a stone.]

Palæont. (*Of the form Belemnites, rendered in
English Belemnite*): A genus of fossil chambered
shells, the typical one of the family Belemnitidæ.
The slow progress of the human mind toward sci-
entific truth, and the circuitous route which the
limitation of its powers compel it to take in reach-
ing that goal, are beautifully exemplified by the
successive hypotheses broached as to the nature of
the belemnite. The first was that it was a product
of the mammal called by the Romans lynx, and by
the Greeks *lungkx*, probably the Caracal (*Felis
caracal*). It was therefore called *Lapis lyncis*,
and *lyncurion* or *lyncurium*, *lungkourion*, though
some think that by these words were meant reddish
amber, or the mineral tourmaline or the hyacinth,
the Scriptural jacinth. The puzzling fossils figured
next as *Idæi dactyli*, that is, "fingers from Mount
Ida," freely translated or transformed in the Mid-
dle Ages into "devil's fingers." Then electricity
was called in to account for them, and they were
named Thunderstones (*Lapides fulminantes*), and
Picks, or, less hypothetically, "Arrow Stones." At
a more advanced period they were looked upon as
stalactites, or as crystals which never had pertained
to living beings. At length the true view struggled
into existence that they were organic remains.
Held by Von Tressau, Klein, Breynius, Da Costa,
Brander, and Plott to be shells, the proper position
of which they could not determine, Cuvier and
Lamarck made a great step forward in ranking
them as cephalopods with an internal shell, a con-
clusion confirmed by Buckland, Owen, and others.
The last-named palæontologist placed the belem-
nite in the dibranchiate order of Cephalopods.

One essential part of the shell is a phragmocone
[see BELEMNITIDÆ] or chambered cone, that is, a
portion conical in form and divided transversely by
septa or partitions, like a pile of watch-glasses, into
shallow chambers, connected with each other by a
siphuncle or small pipe or siphon near the margin
of the cone. The entire cone is enveloped in a
sheath, which rises above the chambers and gives
support to the soft body of the animal (called the
pro-ostacrum), and this again in a conical cavity or
alveolus excavated in the base of a long tapering
body resembling the head of a javelin, and called
the *guard*. It is from this fact that the name
Belemnite has arisen. Dr. Buckland and Agassiz
discovered in specimens from Lyme Regis, collected
by Miss Anning, a fossil ink-bag and duct. There
have been found also traces of the contour of the
large sessile eyes, the funnel, a great proportion of
the muscular parts of the mantle, the remains of
two lateral fins, eight cephalic arms, each appar-
ently provided with twelve to twenty pairs of
slender elongated horny hooks. Owen considers

that the belemnite combined characters at present divided among the three cephalopodous genera *Sepia*, *Onychoteuthis*, and *Sepiola*.

These animals seem to have been gregarious, living in shallow water with a muddy bottom rather than one studded with projecting corals. Owen thinks that they preserved a tolerably vertical position when swimming, at times rising swiftly and stealthily toward the surface, infixing their claws in the abdomen of a supernatant fish, and dragging it down to the depths to be devoured. Belemnites are found all over Europe, and also in India. In 1875, Tate estimated the known species at more than one hundred, ranging from the Lias to the Chalk.

běl-ēm-nīt'-ic, *a.* [Eng. *belemnite*(e); *-ic*.]

1. Pertaining to the belemnite shell; constituting the fleshy portion of the belemnite.

" . . . a specimen of a Belemnite in which not only the ink-bag, but the muscular mantle, the head and its crown of arms are all preserved in connection with the *belemnitic* shell."—*Owen: Invertebrata* (1843).

běl-ēm-nīt'-i-dæ, *s.* [BELEMNITE.]

Palæont.: A family of mollusks belonging to the class Cephalopoda, the order Dibranchiata, and the section Decapoda. The shell consists of a "pen" terminating posteriorly in a chambered cone, technically called a *phragmocone*, from Gr. *phragmos*=a hedge, fence, paling, fortification, or inclosure, and *kōnos*=the mathematical figure termed a cone. The phragmocone is sometimes invested with a fibrous guard, and it has air-cells connected by a siphuncle piercing the several chambers close to the ventral side. Dr. S. O. Woodward arranges the Belemnitidæ between the Teuthidæ, or Calamaries and Squids, on the one hand, and the Sepiadæ or Sepias on the other. In geological time they extend from the Lias to the Chalk. The genera are Belemnites, Belemnitella, Xiphoteuthis, Acanthoteuthis, Belemnoteuthis, and Conoteuthis.

The following Belemnitidæ characterize the Lower Lias: *B. acutus*, *B. pencillatus*, *B. clavatus*. Middle Lias: *B. compressus*, *B. breviformis*, *B. parillosus*.

Upper Lias: *B. acuminatus*, *B. lævis*, *B. Ilminsterensis*.

bě-liē f, ***bē-lē've**, ***bī-lē've**, ***bŷ-lē've**, ***by lyve**, *s.* [A. S. *geleafa*=consent, assent, confidence, belief, faith; *leafa*=belief (compare also *geleaf*=leaf, leave, license, permission); Dut. *geloof*=faith, creed, belief, credit, trust; Ger. *glarube*, *glaruben*=faith, good faith.] [BELIEVE.]

I. The mental act or operation of accepting as true any real or alleged fact or opinion on the evidence of testimony, or any proposition on the proof afforded by reasoning. It is opposed to the conviction produced by personal observation or experience, which is stronger than that resting on testimony or reasoning. The term *belief* may be used for full and unwavering acceptance of anything as true, for an acceptance weak and fluctuating, or for anything intermediate between the two.

†II. The state of being accepted as true on the evidence of reasoning or testimony.

III. That which is accepted as true on the evidence of testimony or reasoning.

1. *Gen.*: In the foregoing sense.

" . . . render it necessary for even the wisest of men to take a large portion of their *beliefs* from others."—*Times*, November 13, 1876.

"*Belief* is great, life-giving."—*Carlyle: Heroes and Hero-worship*, Lect. ii.

2. *Specially*:

(a) Religious belief, a creed, the system of doctrines held by the professors of any faith; yet more specially, Christianity.

"In the heat of general persecution, whereunto Christian *belief* was subject upon the first promulgation, it much confirmed the weaker minds, when relation was made how God had been glorified through the sufferings of martyrs."—*Hooker*.

(b) The statement of such system of doctrine. (Used specially of the Apostles' Creed.)

3. *Christian Theol.*: The implicit acceptance, by the aid of the Holy Spirit, of every statement which there is reason to believe comes from God. *Spec.*, the acceptance of all that He has revealed regarding the divinity and sonship of Jesus Christ, His mission to the earth, His life, His death, His resurrection and ascension. For this *faith* is used more frequently than *belief*. [FAITH.]

"Faith is a firm *belief* of the whole word of God, of His gospel, commands, threats, and promises."—*Wake*.

¶ Crabb thus distinguishes between the terms *belief*, *credit*, *trust*, and *faith*: "*Belief* is generic, the others are specific terms; we *believe* when we *credit* and *trust*, but not always *vice versâ*. *Belief* rests on no particular person or thing; but *credit* and *trust* rest on the authority of one or more individuals. Everything is the subject of *belief* which produces one's assent: the events of human life are *credited* upon the authority of the narrator; the words, promises, or the integrity of individuals are *trusted*; the power of persons and the virtue of things are objects of *faith*. *Belief* and *credit* are particular actions or sentiments; *trust* and *faith* are permanent dispositions of the mind. Things are entitled to our *belief*, persons to our *credit*; but people repose *trust* or have *faith* in others . . ." "*Belief*, *trust*, and *faith* have a religious application, which *credit* has not. *Belief* is simply an act of the understanding; *trust* and *faith* are active moving principles of the mind in which the heart is concerned. *Belief* does not extend beyond an assent of the mind to any given proposition; *trust* and *faith* are lively sentiments which impel to action. *Belief* is to *trust* and *faith* as cause to effect: there may be *belief* without either *trust* or *faith*; but there can be no *trust* or *faith* without *belief*. We *believe* that there is a God, who is the creator and preserver of all His creatures; we therefore *trust* in Him for His protection of ourselves. We *believe* that Jesus Christ died for the sins of men; we have therefore *faith* in His redeeming grace to save us from our sins." (*Crabb: Eng. Synon.*)

¶ Professor Bain considers that *belief* largely depends upon the will. He says, "It will be readily admitted that the state of mind called *belief* is, in many cases, a concomitant of our activity. But I mean to go farther than this, and to affirm that *belief* has no meaning, except in reference to our actions; the essence or import of it is such as to place it under the region of the will. We shall soon see that an intellectual notion or conception is likewise indispensable to the act of *believing*; but no mere conception that does not directly or indirectly implicate our voluntary exertions, can ever amount to the state in question." (*Bain: The Emotions and the Will*, chap. "Belief," p. 524.)

***bē-liē'-fūll**, *a.* [Eng. *belief*; *full*.] Full of belief; disposed to believe.

"It is for thee sufficient to shewe a minde *beliefull* and readie to obeie . . ."—*Udal: Luke*, ch. i. (*Richardson*.)

***bē-liē'-fūl-nesse**, *s.* [O. Eng. *belieful*; *-nesse*.] The quality of being disposed to believe.

"Thei disdeyne to have the godly *belieflesse* of the heathen to be praised, and yet do they not all the while amende their owne wicked vnbelief."—*Udal: Luke*, ch. iv. (*Richardson*.)

A. Trans.: To accept as true, not on one's personal knowledge, but on the testimony of others, or on reasonings which appear more or less conclusive. It is used when the assent to the statement or proposition is of a very firm character, and also when it is weak and wavering. (It may be followed by the objective of the person whose word is accepted as true, or by the objective of the statement made.)

"That Cassio loves her, I do well believe it."—*Shakesp.: Othello*, ii. 1.

"Ten thousand things there are, which we believe merely upon the authority or credit of those who have spoken or written of them."—*Watts: Logic*.

B. Intransitive:

I. Ordinary Language:

1. *Gen.*: To accept a statement or proposition as true on the evidence afforded by the testimony of another person, or on reasonings of one's own.

2. Specially:

(a) *Colloquial*: To accept with some degree of doubt.

(b) To exercise the grace of Christian faith. [See II.]

II. Theology:

1. To assent to the claim which Jesus Christ put forth to be the Messiah, the Son of God, and the Saviour, and place confidence in the efficacy of his sacrifice for sin.

¶ In Rom. x. 10, this belief is attributed to the heart. The opposition in that verse is not, however, so much between the heart and the intellect as between what is secret and personal and what is openly professed by the lips.

"For with the heart man believeth unto righteousness; . . ."—*Romans* x. 10.

It is followed (a) by *in* or *on* placed before the person or being who is the object of faith.

"... ye believe in God, believe also in me."—*John* xiv. 1.

"And they said, Believe on the Lord Jesus Christ, and thou shalt be saved, and thy house."—*Acts* xvi. 31.

bēll (1), ***bēlle**, ***bēl**, *s.* [A. S. *bella*=a bell, a word imitated from the sound. In Dut. *bel*; Old Dut. *belle*. Connected with A. S. *bellan*=to bellow (BELLOW), and with *peal* (PEAL).]

A. Ordinary Language:

I. Literally:

1. An instrument of a particular form and material for producing sounds. It consists of a reversed cup, bearing at its apex an ear or canon, by which it is suspended from a beam or other fixed body above, and having hung internally a clapper or hammer, by the percussion of which on the reversed cup the required sound is generated. It is generally formed of bell-metal (q. v.). Golden bells are mentioned in connection with religious worship in Exodus xxviii. 33-34. They alternated with pomegranate-like knobs on the lower part of the Jewish high-priest's blue robe of the ephod. Bells were found by Layard at Nimrod, near the site of old Nineveh, the alloy of which they were formed being ten parts of copper to one of tin. The Greeks and Romans used bells in camps, markets, and baths, as well as in religious observances. The introduction of large bells into churches is attributed to Paulinus, Bishop of Nola in Campania, about the year 400. Bede mentions their use in England toward the end of the seventh century. They were first cast in that country about A. D. 940. The great bell of St. Paul's Cathedral, in London, cast in 1709, is 6.7 feet in diameter; it weighs 11,470 lbs.; and Big Ben, of Westminster, cast in 1858, 30,324 lbs. These dimensions are, however, dwarfed by some Russian bells. That of the Kremlin, the greatest ever constructed, when re-cast in 1733, was enlarged till it weighed 432,000 lbs. It is said, though some deny it, that this enormous mass was actually suspended for four years. In 1737, however, a fire caused it to fall. In 1837 a chapel was excavated below it, of which it was made to constitute the dome. Next, it is said, in size to the Russian bells is one at Amarapoora in Burmah, 260,000 lbs; and one at Pekin, 130,000; both, of course, are for Buddhist worship. Bells are often affixed to cattle, sheep, &c., when turned loose to feed, and are useful, especially in forests, to indicate where the animals are feeding. Sheep-bells of bronze, used in ancient Italy, are still to be seen in the museum at Naples.

The order for the founding of the famous Liberty Bell, of Philadelphia, which rang when the Continental Congress declared the independence of the United States in 1776, was given in 1751.

The State House of Pennsylvania, in Philadelphia, work on which had been suspended for a

number of years, was then approaching completion. The lower floors were already occupied by the Supreme Court in the chamber, while in the other assembled the Freemen of the Province of Pennsylvania, then consisting of one body. A committee was appointed by the Freemen, with Peter Norris as chairman, and empowered to have a new bell cast for the building. The commission for the bell was in the same year awarded to Robert Charles, of London, the specification being that the bell should weigh 2,000 pounds and cost £100 sterling. It was to be made by the best workmen, to be examined carefully before being shipped, and to contain, in well-shaped letters around it, the inscription: "By order of the Province of Pennsylvania, for the State House in the City of Philadelphia, 1752." An order was given to place underneath this the fatal and prophetic words from Leviticus xxv. 10: "Proclaim liberty throughout the land and to all the inhabitants thereof." The reason for the selection of this text has been a subject of much conjecture, but the true reason is apparent when the full text is read. It is as follows: "And ye shall hallow the fiftieth year and proclaim liberty throughout the land and to all the inhabitants thereof." In selecting the text the good Quakers had in memory the arrival of William Penn and their forefathers more than half a century before. In August, 1752, the bell arrived, but though in apparent good order, it was cracked by a stroke of the clapper while being tested. It could not be sent back, as the captain of the vessel who had brought it over could not take it on board. Two skillful men undertook to recast the bell, which, on being opened, revealed a bell which pleased very much. But it was also found to be defective. The original bell was considered too high, and a quantity of copper was added to the composition, but too much copper was added. There were a great many witticisms on account of the sound failure, and the ingenious workmen undertook to recast the bell, which they successfully did, and it was placed in condition in June, 1753. On Monday, the 8th of July (not the 4th), at noon, true to its motto, it rang out the memorable message of "Liberty throughout the land and to all the inhabitants thereof." For fifty years the bell continued to be rung on every festival and anniversary, until it eventually cracked. An ineffectual attempt was made to cause it to continue serviceable by enlarging the cause of its dissonance and chipping the edges. It was removed from its position in the tower to a lower story, and only used on occasions of public sorrow, such as the death of ex-Presidents and statesmen. Subsequently it was placed on the original timbers in the vestibule of the State House, and in 1873 it was suspended in a prominent position immediately beneath where a larger bell, presented to the city in 1866, now proclaims the passing hours.

In 1893 it was taken to Chicago and placed on exhibition at the World's Columbian Exposition. On its way to Chicago it was greeted by crowds of people at the railroad stations along the route with cheers and patriotic speeches. At the close of the Exposition it was returned to Philadelphia, and met with a like greeting from the populace at every stop on the return trip.

This, of course, would ring whenever she moved, and thus give warning of her approach. bělles-lěttres (*es* mute), *s. pl.* [Fr. (*lit.*)=fine letters.] A term borrowed from the French, and signifying polite literature, what were of old called

"the humanities." It has been held to include such kinds of literature as require for their production imagination and taste, rather than study and reflection. Littré, without doubt, giving the actual usage of the term *belles-lettres* in France, makes it include grammar, eloquence, and poetry. In this country, poetry, fiction, rhetoric, philology, and even history, are generally included within its limits; but whatever may have been the case in a more backward state of thought than that which at present exists, it is a satire on philology, history, and grammar to regard them as studies in which imagination is predominant.

"The exactness of the other is to admit of something like discourse, especially in what regards the *belles-lettres*."—*Tatler*.

"When a revolted party of great numerical strength are able to form a regular government and rule over the whole or part of the territory which they claim, humanity dictates that they should not be treated as rebels guilty of treason, but should, if captured, be regarded as prisoners of war. To attain this result, it is needful for those who have risen in arms against the government to make every effort to obtain for their party the position of *belligerents*. In the contest between the Federals and Confederates in the war of 1861-1865, the latter section of the American people, at the very commencement of the struggle, claimed the privileges of *belligerents*. Their demand was promptly acceded to by the British government, on which the Federal authorities took umbrage, contending that the recognition had been premature, while the British maintained that it could not have been refused or delayed.

I. Ordinary Language:

1. *Lit.*: An instrument for blowing the fire in manufactories, forges, or private houses. Its sides are so formed and worked that the upper one alternately rises and falls, with the effect of compelling the chest or bladder-like instrument first to expand and then to contract; the former process causing the air to enter the interior, and the latter one to leave it by means of a pipe or tube designed to conduct it to the portion of a fire which it is to blow. In a hand-bellows there are handles to be grasped; in a larger instrument designed for a manufactory, and called a *blowing-machine*, the propulsive power is obtained by machinery.

"Week in, week out, from morn till night,
 You can hear his bellows blow."

Longfellow: The Village Blacksmith.

¶ *Bellows* may be singular with the article *a* before it, or may enter into the phrase "a pair of bellows," in which case it is plural.

"Thou neither, like a bellows, swell'st thy face,
 As if thou wert to blow the burning mass
 Of melting ore."
Dryden.

2. Fig.: It is used—

(1) Of the lungs.

"The lungs, as bellows, supply a force of breath; and the *aspera arteria* is as the nose of bellows, to collect and convey the breath."—*Holder.*

(2) Of sighs or other manifestations of emotion.

"Since sighs, into my inward furnace turn'd,
 For bellows serve, to kindle more the fire."
Sidney.

II. Technically:

1. Mechanics, Pneumatics, &c.:

(1) The simple instrument described under **A., I.** 1, for blowing fires in houses. A pair of bellows, worked chiefly by the feet, is figured on an Egyptian monument attributed to the time of Thothmes III., B. C. about 1490, and one is mentioned in *Jer. vi. 29*; both of these were used for smelting metals [No. (2)]. The representation of a bellows for the hand, and presumably for domestic use, is found on an old Roman lamp; it is exactly of the modern type.

Ancient Egyptian Bellows.

(2) An instrument or machine worked by machinery, and designed to blow the fire of a furnace used in smelting metals. The name more commonly applied to such a machine is **BLOWER** (q. v.).

(3) *The bellows of an organ, harmonium, concertina, or any similar instrument:* An instrument for supplying wind to the pipes, tongues, and reeds. (*Stainer & Barrett.*)

"Twelve pair of bellows, ranged in stated row,
 Are joined above, and fourteen more below.
 These the full force of seventy men require,
 Who ceaseless toil, and plenteously perspire,
 Each aiding each, till all the wind be prest
 In the close confines of th' incumbent chest,
 On which four hundred pipes in order rise,
 To bellow forth that blast the chest supplies."

Mason: Essay on Church Music. (Transl. from the Monk Wolstan, 10th cent.)

2. *Hydrostatics, &c. Hydrostatic bellows:* An instrument designed as a toy rather than for use. It is, however, of some utility as illustrating what is called the hydrostatic paradox. Two horizontal flat boards, united by leather folded at the sides so as to be capable of expansion, constitute a chamber, into which water is introduced from a long narrow pipe rising vertically. By hydrostatic law this water will act with such pressure on the interior of the chamber that it will force the upper board to rise as far as the leather will permit, even if heavy weights be put upon it to keep it down.

¶ *In composition:* Emitted by, or in any other way pertaining to, a bellows, as in the following compounds:

bellows-camera, s.

Celtic Myth.: A superstitious observance now or formerly practiced among the Scottish and Irish Celts, as well as in Cumberland and Lancashire. The Scotch observe the Beltane festival chiefly on the 1st of May (old style), though in the west of that country St. Peter's Day, June 29th, was preferred. In Ireland there were two Belteins, one on the 1st of May, and the other on the 21st of June. The ceremonies varied in different places, but one essential part of them everywhere was to light a fire. At Callander, in Perthshire, the boys went to the moors, cut a table out of sods, sat round it, lit a fire, cooked and ate a custard, baked an oatmeal cake, divided it into equal segments, blackened one of these, drew lots, and then compelled the boy who drew out the blackened piece to leap three times through the fire, with the view of obtaining for the district a year of prosperity. In Ireland, cattle were driven through the fire. The name given suggests that the actual worship of Baal as the sun, which could easily have come from the Phœnicians, existed in Great Britain in pre-Christian times. Originally human sacrifices may have been offered, and then as primitive society began to discern the cruelty of this practice, it may have been deemed enough for the victim to pass through the fire in place of being burnt to death. Finally, cattle would tend to be substituted for human beings. Merry-makings came at length to attend the Beltane festival. [See the examples under the compound words.]

A. *As adj.*: Pertaining to St. Benedict, of Nursia [B.], or to the Benedictine monks.

"Black was her garb, her rigid rule
Reformed on Benedictine school."
Scott: Marmion, ii. 4.

¶ Though fourteen Popes were called Benedict, yet the term Benedictine is rarely, if at all, applied to any of them.

B. *As substantive*:

Ch. History (pl. *Benedictines*): The followers of St. Benedict, of Nursia, in Italy. He was born in A. D. 480, and was educated in part at Rome. At the age of fourteen he left that city for Sublacum, now Subiaco, a place about forty miles distant, where he spent thirty-five years, at one time as a solitary recluse, at another as head of a monastic establishment. In 529 he removed to Mount Cassino, fifty miles further south, where, converting some pagan worshippers of Apollo, he transformed their temple into a monastery and became its abbot. He composed rules for its management, making every monk pledge himself to perfect chastity, absolute poverty, and implicit obedience in all respects to his superiors. He was to live in the monastery subject to his abbot. These vows were irrevocable, whereas up to that time the monks had been allowed to alter the regulations of their founder at their pleasure. The date of St. Benedict's death is generally placed in 543, though another account makes it 547. The rule he instituted was adopted at an early period by various other monastic communities; it was confirmed, about fifty-two years after the death of its founder, by Pope Gregory the Great, and was ultimately accepted with more or less enthusiasm by nearly all the monkish communities of the West, though its pristine severity became modified with the lapse of time.

As long as the Benedictines remained poor they were a blessing to the countries in which they lived, and especially to Germany, spending as they did several hours a day in gardening, agriculture, and mechanical labor, and another portion of their time in reading, besides keeping school outside the walls of their convents. Science and literature are also indebted to them for having copied many of the classical authors and preserved such knowledge as existed in their age. But when at length their merits had drawn much wealth to their order (*individually* they were not allowed to retain property), luxury and indolence sapped their virtues and diminished their influence for good. Afterward becoming reformed, especially in France in the seventeenth century, the Benedictines again rendered service by the issue of an excellent edition of the Fathers.

The Benedictine habit seems to have been introduced after the age of St. Benedict. It consisted of a loose black coat, or a gown, reaching to their feet, and having large wide sleeves. Under it was a flannel habit white in color and of the same size, while over all was a scapular. The head-dress was a hood or cowl pointed at the tip, and boots were worn upon the feet. From the predominantly black color of their attire they were sometimes called Black Monks. They must not be confounded with the Black Friars, who were Dominicans. [BLACK FRIARS.]

There were Benedictine nuns as well as monks. When they originated is uncertain. There were first and last many branches of Benedictines, as the Carthusians, Cistercians, Celestines, Grandmontensians, Præmonstratensians, Cluniacensians, Camaldulensians, &c.

II. A benefit conferred.

†**1.** In a general sense.

"Two ways the rivers
Leap down to different seas, and as they roll
Grow deep and still, and their majestic presence
Becomes a benefaction to the towns
They visit, . . ."—*Longfellow: Golden Legend*, v.

2. A charitable donation, money or land given for a charitable purpose.

¶ Crabb thus distinguishes between *benefaction* and *donation*: "Both these terms denote an act of charity, but the former comprehends more than the latter. A *benefaction* comprehends acts of personal service in general toward the indigent; *donation* respects simply the act of giving and the thing given. *Benefactions* are for private use; *donations* are for public service. A benefactor to the poor does not confine himself to the distribution of money; he enters into all their necessities, consults their individual cases, and suits his *benefactions* to their exigencies; his *donations* form the smallest part of the good he will do."

bĕn-ĕ-făċ'-tōr, ***bĕn-e-făċ'-tōr**, *s.* [From Lat. *benefactor*=one who confers a benefit; from *benefacio*=to do good to; *bene*=well, and *facio*=to do. In Fr. *bienfaiteur*; Ital. *benefattore*.]

¶ In the authorized version of the Bible (Luke xxii. 25) the word is given as the translation of the Gr. *Euergetai*, the pl. of *euergetēs*=a well-doer, a benefactor; from *eu*=well, and *ergon*=a work, a deed. This is described as an honorary title among certain of "the Gentiles" for men in authority.

2. *Spec.*: One who gives a charitable donation or subscription.

(*Trench: On the Study of Words*, p. 157.)]

†**A.** *Ord. Lang.*: Benefit or advantage conferred upon another.

" . . . parceneris of benefice."—*Wycliffe (Purvey)*, 1 *Tim.* vi. 2.

B. *Technically*:

†**1. Feudal system**: An estate held by feudal tenure, the name being given because it was assumed that such possessions were originally gratuitous donations, "*ex mero beneficio*" of the donor. At first they were for life only, but afterward they became hereditary, receiving the name of *feuds*, and giving that of *benefices* over to church livings. (No. 2.)

2. *Eccles. Law, Ord. Lang., &c.*: Formerly, and even sometimes yet, an ecclesiastical living of any kind, any church endowed with a revenue, whether a dignity or not. More generally, however, the term is reserved for parsonages, vicarages and donatives, while bishoprics, deaneries, archdeacons, and prebendaries are called dignities. In the opinion of Blackstone a close parallel existed between the procedure of the popes when they were in the plenitude of their power and that of the contemporary feudal lords. The former copied from the latter, even to the adoption of the feudal word *benefice* for an ecclesiastical living. (See No. 1.) Blackstone says:

"The pope became a feudal lord; and all ordinary patrons were to hold their right of patronage under this universal superior. Estates held by feudal tenure, being originally gratuitous donations, were at that time denominated *beneficia*: their very name, as well as constitution,

bōil, bōy; pōut, jōw1; cat, çell, chorus, çhin, bench; go, gem; thin, ðhis; sin, a; expect, Xenophon, exist. ph = f. -cian, -tian = şan. -tion, -sion = şhñ; -tion, -şion = zhñ. -tious, -cious, -sious = şhş. -ble, -dle, &c. = be1, de1.

was borrowed, and the care of the souls of a parish thence came to be denominated a *benefice*. Lay fees were conferred by investiture or delivery of corporal possession; and spiritual *benefices*, which at first were universally donative, now received in like manner a spiritual investiture, by institution from the bishop, and induction under his authority. As lands escheated to the lord, in defect of a legal tenant, so *benefices* lapsed to the bishop upon non-presentation by the patron, in the nature of a spiritual escheat. The annual tenths collected from the clergy were equivalent to the feudal render, or rent reserved upon a grant; the oath of canonical obedience was copied from the oath of fealty required from the vassal by his superior; and the *primer seisin* of our military tenures, whereby the first profits of an heir's estate were cruelly extorted by his lord, gave birth to as cruel an exaction of first-fruits from the beneficed clergy. And the occasional aids and talliages, levied by the prince on his vassals, gave a handle to the pope to levy, by means of his legates *a latere*, peter-pence, and other taxations."

bĕn'-ĕ-fĭcĕd, *a.* [From *benefice*, *s.* (q. v.)] Possessed of a benefice.

"... all beneficed clergymen and all persons holding academical offices."—*Macaulay: Hist. Eng.*, ch. xiv.

†bĕn'-ĕ-fĭcĕ-lĕss, *a.* [From *Eng. benefice*, and suff. -less=without.] Destitute of a benefice.

"That competency of means which our beneficeless prelatians prize of."—*Sheldon: Mir. of Ant.*, p. 190.

bĕn-ĕf-i-ĕnĕce, ***bĕn-ĕf-ŷ-ĕnĕce**, *s.* [In *Fr. bienfaisance*; *Ital. beneficenza*; from *Lat. beneficentia*=kindness, beneficence; from *bene*=well; and *faciens*=making, doing, *pr. par.* of *facio*=to make, to do.] The habitual practice of doing good; active kindness, benevolence in operation, charity.

"Love and charity extends our beneficence to the miseries of our brethren."—*Rogers*.

bĕn-ĕf-i-ĕnt, *a.* [In *Fr. bienfaisant*; *Ital. benefico*; from *Lat.* (1) *bene*, and (2) *faciens*=well-doing.]

1. *Of a person or other being*: Kind, generous, doing good.

"God, beneficent in all His ways."

Couper: Retirement.

"Beneficent Nature sends the mists to feed them."

Longfellow: Golden Legend, v.

2. *Of an act*: Marked or dictated by benevolence; kind.

¶ Crabb thus distinguishes between the terms *beneficent*, *bountiful*, or *bounteous*, *munificent*, *generous*, and *liberal*: "*Beneficent* respects everything done for the good of others: *bounty*, *munificence*, and *generosity* are species of *beneficence*: *liberality* is a qualification of all. The first two denote modes of action; the latter three either modes of action or modes of sentiment. The sincere well-wisher to his fellow-creatures is *beneficent* according to his means; he is *bountiful* in providing for the comfort and happiness of others; he is *munificent* in dispensing favors; he is *generous* in imparting his property; he is *liberal* in all he does. *Beneficence* and *bounty* are the peculiar characteristics of the Deity: with Him the will and the act of doing good are commensurate only with the power; He was *beneficent* to us as our Creator, and continues His *beneficence* to us by His daily preservation and protection; to some, however, He has been more *bountiful* than to others, by providing them with an unequal share of the good things of this life. The *beneficence* of man is regulated by the *bounty* of Providence: to whom much is given, from him much will be required. Good men are ready to believe that they are but stewards of all God's gifts, for the use of such as are less *bountifully* provided. Princes are *munificent*, friends are *generous*, patrons *liberal*. *Munificence* is measured by the quality and quantity of the thing bestowed; *generosity* by the extent of the sacrifice made; *liberality* by the warmth of the spirit discovered. *Munificence* may spring either from ostentation or a becoming sense of dignity; *generosity* from a generous temper, or an easy unconcern about property; *liberality* of conduct is dictated by nothing but a warm heart and an expanded mind.

bĕn-ĕf-i-ĕnt-lŷ, *adv.* [Eng. *beneficent*; -ly.] In a beneficent manner, kindly, generously, charitably.

B. Law. Benefit of clergy (*Privilegium clericale*): The advantage derived from the preferment of the plea "I am a clergyman." When, in mediæval times, a clergyman was arraigned on certain charges he was permitted to put forth the plea that, with respect to the offense of which he was accused, he

was not under the jurisdiction of the civil courts, but, being a clergyman, was entitled to be tried by his spiritual superiors. [CLERGY, CLERK.] In such cases the bishop or ordinary was wont to demand that his clerks should be remitted to him out of the king's courts as soon as they were indicted; though at length the custom became increasingly prevalent of deferring the plea of being a clergyman till after conviction, when it was brought forward in arrest of judgment. The cases in which the benefit of clergy might be urged were such as affected the life or limbs of the offender, high treason, however, excepted. In these circumstances laymen often attempted to pass themselves off as clergymen, when the practice was to bring a book and ask the accused person to read a passage. If he could do so, his plea of being a clergyman was admitted; if he failed, it was rejected. The practical effect of this was to give the bishop the power, if he felt so disposed, of removing every reader from the jurisdiction of the courts.

By the act of Congress of April 30, 1790, it is provided that the benefit of clergy shall not be used or allowed upon conviction of any crime, for which, by any statute of the United States, the punishment is, or shall be, declared to be death.

In 1489, Henry VII. restricted the privilege. A layman able to read who pleaded his "clergy" could henceforth do so only once; and in order that he might be identified if he attempted it again, he was burned in the hand. Henry VIII., in 1512, abolished benefit of clergy with regard to murderers and other great criminals. The practice of requiring the accused person to read was put an end to in 1706; but it was not till 1827 that the 7 and 8 George IV., c. 28, known as Peel's Acts, swept the benefit of clergy itself away.

(a) Crabb thus distinguishes between the words *benefit*, *favor*, *kindness*, and *civility*: "*Benefits* and *favors* are granted by superiors: *kindnesses* and *civilities* pass between equals. *Benefits* serve to relieve actual want; *favors* tend to promote the interest or convenience. *Kindnesses* and *civilities* serve to afford mutual accommodation by a reciprocity of kind offices. *Kindnesses* are more endearing than *civilities*, and pass mostly between those known to each other; *civilities* may pass between strangers. Dependence affords an opportunity for conferring *benefits*; partiality gives rise to *favors*; *kindnesses* are the result of personal regard, *civilities* of general benevolence. *Benefits* tend to draw those closer to each other who by station of life are set at the greatest distance from each other; affection is engendered in him who *benefits*, and devoted attachment in him who is *benefited*. *Favors* increase obligation beyond its due limits; if they are not asked and granted with discretion, they may produce servility on the one hand, and haughtiness on the other. *Kindnesses* are the offspring and parent of affection; they convert our multiplied wants into so many enjoyments; *civilities* are the sweets which we gather in the way as we pass along the journey of life."

(b) *Benefit, service, and good office* are thus discriminated: "These terms, like the former (*v. Benefit, favor*), agree in denoting some action performed for the good of another, but they differ in the principle on which the action is performed. A *benefit* is perfectly gratuitous, it produces an obligation; a *service* is not altogether gratuitous; it is that at least which may be expected, though it cannot be demanded; a *good office* is between the two; it is in part gratuitous, and in part such as one may reasonably expect. *Benefits* flow from superiors, and *services* from inferiors or equals; but *good offices* are performed by equals only. Princes confer *benefits* on their subjects; subjects perform *services* for their princes: neighbors do *good offices* for each other. *Benefits* consist of such things as serve to relieve the difficulties, or advance the interests, of the receiver; *services* consist in those acts which tend to lessen the trouble, or increase the ease and convenience, of the person served; *good offices* consist in the use of one's credit, influence, and mediation for the advantage of another; it is a species of voluntary service.

B. Technically:

1. *Phren.:* The organ of *benevolence* is fixed by phrenologists on the middle of the anterior part of the head, behind the spot where the forehead and the hairy scalp meet. [PHRENOLOGY.]

2. *Law & Eng. Hist. (pl. Benevolences):* The attractive name formerly given to compulsory loans to disguise their real character. Every one, however, saw through the transparent device. It is believed that benevolences were levied as early as the Anglo-Saxon times. They were inconsistent with the provisions of Magna Charta, gained in 1215, yet they continued to be exacted. One notable benevolence was that raised by Edward IV., in 1473. In 1484, Richard III. gained popularity by procuring a parliamentary condemnation of the system, and the next year imposed a benevolence, as if nothing had happened. Henry VII., in 1492, and James I., in 1613, raised money in a similar way; and in the reign of Charles I. the exaction of benevolences was one of the popular grievances which produced the civil war, though less potent in the effects which it produced than the celebrated "ship-money." [SHIP-MONEY.] The Bill of Rights, passed in February, 1689, once more declared them illegal, and this time with effect. "Benevolences," "aids," and "free gifts" have now given place to taxes, boldly called by their proper name.

"After the terrible lesson given by the Long Parliament, even the Cabal did not venture to recommend *benevolences* or ship-money."—*Macaulay: Hist. Eng.*, ch. ii.

(a) Crabb thus distinguishes between *benevolence* and *beneficence*: "*Benevolence* is literally well willing; *beneficence* is literally well doing. The former consists of intention, the latter of action; the former is the cause, the latter the result. *Benevolence* may exist without *beneficence*; but *beneficence* always supposes *benevolence*: a man is not said to be *beneficent* who does good from sinister views. The *benevolent* man enjoys but half his happiness if he cannot be *beneficent*; yet there will still remain to him an ample store of enjoyment in the contemplation of others' happiness. He who is gratified only with that happiness which himself has been instrumental in producing, is not entitled to the name of *benevolent*."

(b) The following is the distinction between *benevolence*, *benignity*, *humanity*, *kindness*, and *tenderness*: *Benevolence* and *benignity* lie in the will; *humanity* lies in the heart; *kindness* and *tenderness* in the affections. *Benevolence* indicates a general good will to all mankind; *benignity* a particular good will, flowing out of certain relations. *Humanity* is a general tone of feeling; *kindness* and *tenderness* are particular modes of feeling. *Benevolence* consists in the wish or intention to do good; it is confined to no station or object: the *benevolent* man may be rich or poor, and his *benevolence* will be exerted wherever there is an opportunity of doing good. *Benignity* is always associated with power, and accompanied with condescension. *Benevolence* in its fullest sense is the sum of moral excellence, and comprehends every other virtue; when taken in this acceptation, *benignity*, *humanity*, *kindness*, and *tenderness* are but modes of *benevolence*. *Benevolence* and *benignity* tend to the communicating of happiness; *humanity* is concerned in the removal of evil. *Benevolence* is common to the Creator and His creatures; it differs only in degree; the former has the knowledge and power as well as the will to do good; man often has the will to do good without having the power to carry it into effect. *Benignity* is ascribed to the stars, to heaven, or to princes; ignorant and superstitious people are apt to ascribe their good fortune to the *benign* influence of the stars rather than to the gracious dispensations of Providence. *Humanity* belongs to man only; it is his peculiar characteristic, and is as universal in its application as *benevolence*; wherever there is distress, *humanity* flies to its relief. *Kindness* and *tenderness* are partial modes of affection, confined to those who know or are related to each other: we are *kind* to friends and acquaintances, *tender* toward those who are near and dear.

1. *Literally (of things material)*:

(1) The state of being curved; flexure, curvature.

(2) The amount or degree of the curvature, the degree of flexure.

The temple stood of Mars amipotent."

fāte, **fāt**, **fāre**, **amidst**, **whāt**, **fāl**, **father**; **wē**, **wēt**, **hēre**, **camel**, **hēr**, **thēre**; **pīne**, **pīt**, **sīre**, **sīr**, **marine**; **gō**, **pōt**, **or**, **wōre**, **wōlf**, **wōrk**, **whō**, **sōn**; **mūte**, **cūb**, **cūre**, **unite**, **cūr**, **rūle**, **fūll**; **trȳ**, **Sȳrian**. æ, œ = ē; ey = ā. qu = kw.

2. *Figuratively (of what is immaterial more frequently than of what is material):*

(1) Tendency. *Used—*

(a) Of matter under the operation of natural law.

"If, for example, he wishes to know how a mass of liquid would shape itself, if at liberty to follow the *bent* of its own molecular forces."—*Tyndall: Frag. of Science*, 3d ed., xiv. 405.

(b) *Of the mind or of the heart*: Inclination, disposition, proclivity, whether slight or irresistibly powerful.

¶ In this sense it may be followed by *to, toward, or for*.

"He knew the strong *bent* of the country toward the house of York."—*Bacon*.

"Let there be propensity and *bent* of will to religion, and there will be the same sedulity and indefatigable industry."—*South*.

(2) Full stretch, utmost power of the mind, the heart, or the will. The metaphor is that of a bow drawn back to the utmost.

"They fool me to the top of my *bent*."—*Shakesp.: Hamlet*, iii. 2.

(3) A turning point; a change of subject, or of anything else.

"The exercising the understanding in the several ways of reasoning, teacheth the mind suppleness, to apply itself more dexterously to *bents* and turns of the matter, in all its researches."—*Locke*.

II. Technically:

1. *Arch. & Carp.*: One section of the frame of a building, which is put together on the ground or foundation, and then raised by holding the feet of the posts and elevating the upper portion. A bent consists of posts united by the beams which pass transversely across the building. When raised it is secured by the beams of the side to the other bents. (*Knight*.)

(a) Crabb thus distinguishes between *bent*, *curved*, *crooked*, and *awry*: "*Bent* is here the generic term, all the rest are but modes of the *bent*; what is *bent* is opposed to that which is straight; things may therefore be *bent* to any degree, but when *curved* they are *bent* only to a small degree; when *crooked* they are *bent* to a great degree; a stick is *bent* any way; it is *curved* by being *bent* one specific way; it is *crooked* by being *bent* different ways. Things may be *bent* by accident or design; they are *curved* by design, or according to some rule; they are *crooked* by accident or in violation of some rule; a stick is *bent* by the force of the hand; a line is *curved* so as to make a mathematical figure; it is *crooked* so as to lose all figure. *Awry* marks a species of *crookedness*, but *crooked* is applied as an epithet, and *awry* is employed to characterize the action; hence, we speak of a *crooked* thing, and of sitting or standing *awry*."

(b) *Bent*, *bias*, *inclination*, and *prepossession* are thus discriminated: "All these terms denote a preponderating influence on the mind. *Bent* is applied to the wills, affections, and powers in general; *bias* solely to the judgment; *inclination* and *prepossession* to the state of the feelings. The *bent* includes the general state of the mind, and the object on which it fixes a regard; *bias*, the particular influential power which sways the judging faculty: the one is absolutely considered with regard to itself; the other relatively to its results and the object it acts upon. *Bent* is sometimes with regard to *bias* as cause is to effect; we may frequently trace in the particular *bent* of a person's likes and dislikes the principal *bias* which determines his opinions. *Inclination* is a faint kind of *bent*; *prepossession* is a weak species of *bias*: an *inclination* is a state of something, namely, a state of the feelings; *prepossession* is an actual something, namely, the thing that *prepossesses*." (*Crabb: Eng. Synon.*)

The essential principles of Benthamism were that the aim or end of all human life is happiness—of the kind derived from the absence of pain and the presence of enjoyment. To put forth efforts, then, for the greatest happiness of the greatest number should be the supreme aim of governments and of private individuals, and is itself the highest morality.

Chem.: $\begin{matrix} C_2H_5NH(C_6H_5CO). \\ COOH \end{matrix}$ Also called Hippuric

Acid. It occurs in large quantities in the urine of graminivorous animals in the form of alkaline salts. It crystallizes in long, slender, white, square prisms; it dissolves in 400 parts of cold water, also in hot alcohol. When mixed with putrid matter, it forms benzoic acid. Hippuric acid is monobasic; hippurates of the alkalies are very soluble. It can be formed by the action of benzoyl chloride on silver amidacetate. It is decomposed by alkalies into amidacetic acid and benzoic acid.

bēn'-za-mīde, s. [Eng. *benz(oin)*; *amide*.]

Chem.: $N \begin{matrix} \{ \\ H \\ C_6H_5CO. \end{matrix}$ Obtained by heating ammonium benzoate; also by oxidizing hippuric acid with lead dioxide. Benzamide is a crystalline substance, nearly insoluble in cold but easily soluble in boiling water, also in alcohol and ether. It melts at 115°, and volatilizes at 290°.

bēn'-zēne, s. [Eng. *benz(oin)*, and suffix *-ene*.]

Chem.: C_6H_6 . An aromatic hydrocarbon, also called benzol or phenyl hydride, discovered in 1825 by Faraday in the liquid condensed during the compression of oil gas; it was called by him bicarburet of hydrogen. In 1849, it was found in coal tar by C. B. Mansfield, who lost his life while experimenting with it on February 25, 1855. Aniline is produced from it, which again is the source of the celebrated modern dyes, mauve, magenta, &c. It is obtained from the more volatile portion of coal-tar oil. It is also formed by distilling benzoic acid with lime. Benzene is a thin, colorless, strongly refracting liquid; it boils at 82°. It dissolves fats, resins, iodine, sulphur, and phosphorus; sp. gr., 0.885. Benzene is formed when acetylene is passed through a tube heated to dull redness. Many substitutional products of benzene have been formed. Benzene unites with chlorine or bromine in direct sunlight, forming additive compounds, $C_6H_6Cl_6$.

bēn'-zīle, s. [Eng. *benz(oin)*, and suffix *-ile*.]

Chem.: $C_{14}H_{10}O_2$. A crystalline substance obtained by the action of chlorine on benzoin; it melts at 90°. It is isomeric with dibenzoyl.

bēn'-zīl'-ic, a. [Eng. *benzil(e)*; *-ic*.] Of or belonging to benzile.

benzilic acid, s.

Chem.: $C_{14}H_{12}O_3$. It is called also *diphenylglycollic acid*. It is obtained by the action of alcoholic potash on benzoin. On saturating the alkaline solution with hydrochloric acid, the benzilic acid separates in small, colorless, transparent crystals, which melt at 120°.

bēn'-zīne, s. [BENZOLINE.]

bēn'-zō'-āte, s. [Eng. *benzo(in)*; suff. *-ate*.] [BENZOIC ACID.]

benzoglycollic acid, s.

Chem.: $C_9H_8O_4$. Formed by treating hippuric acid with nitrous acid; then nitrogen is liberated. Benzoglycollic acid contains the elements of benzoic and glycollic (oxyacetic) acid, minus one molecule of water. It crystallizes in colorless prisms.

bēn'-zō-hēl'-i-ġin, s. [Eng. *benzo(in)*; *helicin* (q. v.).]

Chem.: $C_{13}H_{15}(C_7H_5O)O_7$. Produced by the action of dilute nitric acid on benzo-salicin. It is resolved by boiling with alkalies or acid into benzoic acid, salicyl, and glucose.

bēn'-zō'-ic, a. [Eng. *benzo(in)*; *-ic*.] Pertaining to benzoin, existing in benzoin.

benzoic acid, s.

Chem.: $C_7H_6O_2$ or $C_6H_5.CO.OH$. It is called also *phenylformic acid*. It is obtained by oxidation of benzylic alcohol by aqueous chromic acid; by oxidation of benzoic aldehyde, methyl-benzene, &c.; from benzene by acting on its vapor by carbonyl chloride, which converts it into benzoyl chloride, and decomposing this substance by water; by boiling hippuric acid with HCl; or by heating the calcium salt of phthalic acid with lime. Benzoic acid exists in a large quantity in gum-benzoin, from which it is obtained by sublimation. Benzoic acid is a monobasic aromatic acid; its salts are called benzoates, and are soluble, except the basic ferric salt. Cal-

cium benzoate by dry distillation is resolved into calcium carbonate and benzophenone. But dry benzoic acid distilled with excess of quicklime is decomposed into carbonic dioxide and benzene. Benzoic acid has a slight smell when warmed; it melts at 121°, boils at 250°. It dissolves in 200 parts of cold and in 25 parts of boiling water, and also in alcohol. It forms light, feathery, colorless crystals.

benzoic alcohol, s. [BENZYL ALCOHOL.]

benzoic aldehyde, s.

Chem.: Bitter-almond oil, C_7H_6O or $C_6H_5.CO.H$. It is the aldehyde of benzyl alcohol, and is obtained by the oxidation of amygdalin with nitric acid; by digesting bitter almonds and water for six hours at 30° to 40°; by the action of nascent hydrogen on chloride of benzoyl; or by distilling a mixture of calcium benzoate and formate. Pure benzoic aldehyde is a thin colorless liquid with a peculiar odor, sp. gr. 1.043, and boils at 189°; dissolves in thirty parts of water, and mixes with alcohol and ether. Exposed to the air, it absorbs oxygen, and is converted into benzoic acid. It forms crystalline compounds with alkaline bisulphites. Ammonia converts it into hydrobenzamide, a white crystalline body, which, when boiled with aqueous potash, is converted into amarine.

benzoic chloride, s. [BENZOYL CHLORIDE.]

benzoic oxide, s.

1. (*Generally of the corrupted form benjamin.*) *Botany*, *Comm.*, &c.: A kind of resin, obtained from a tree, the *Styrax benzoin*, which belongs to the order Ebenaceæ (Ebenads). It grows in Sumatra, Borneo, and the adjacent islands. Incisions are made in the tree from which the resin exudes, the latter when it comes being left to dry, and then being removed by a knife. Each tree yields annually about three pounds of resin. It is used as a medicine in chronic diseases of the lungs, as an ingredient in perfumery, and in the incense of Roman Catholic and Ritualist churches. [STYRAX.]

"Benzoin or benzoin is the rosin of a tree."—Turner: *Herbal*, pt. ii.

The berries of *Benzoin odoriferum* yield an aromatic stimulant oil. They are said to have been used during one of the American wars as a substitute for allspice. (*Treas. of Bot.*)

(2) *Phar.*: *Asa dulcis* as opposed to *A. foetida*. [ASA.]

bēn'-zō-līne, s. & a. [Eng. *benzol*; *-ine*.]

A. *As substantive*:

1. *Chem.*: Amarine, an organic base obtained from hydro-benzamide by boiling it with aqueous potash. Insoluble in water, but dissolves in alcohol, forming an alkaline solution which deposits small colorless prismatic crystals. It forms sparingly soluble salts. Its formula is $C_{21}H_{19}N_2$.

2. *Comm.*: Benzine, a name given to any volatile inflammable liquid hydrocarbon which burns with a luminous flame, chiefly to the following: (1) *Coal-tar naphtha*, consisting principally of benzene and its homologues. It is used for removing grease from fabrics and as a solvent. Our lady readers should, however, be warned that if they wash kid gloves in benzoline with the view of removing stains of grease, they must not afterward put the gloves on their hands, and hold them to the fire to dry. If they do, the vapor of the benzoline will ignite the gloves, which will flame fiercely. Within the last few years, at least three cases of most fearful injury have arisen in this precise manner, one of them with fatal results. (2) *Petroleum spirit*, consisting of heptane, C_7H_{14} , and other paraffins. It is used as a solvent and also to burn in lamps. These different liquids are often sold mixed together; their vapor is explosive when mixed with air. [PETROLEUM.]

B. *As adjective*: Composed of benzoline; fed by benzoline, supplied with benzoline, in which benzoline is burned.

2. *Ch. Hist. (pl.)*: A Scottish religious sect founded by the Rev. J. Barclay in 1773, on which account they were called also Barclayans. bě-rě-ave (pret. & *pa. par.* *bereaved*, **bereved*, **beraue*d, *bereft*, **berefte*, **beraft*), *v. t. & i.* [From Eng. *be*, and *reave*. A. S. *bereafian*=to bereave, seize, rob, or spoil: *be*, and *reafian*=to seize, to rob. In Sw. *beröfva*; Dan. *beröve*; Dut. *berooven*; Gr. *berauben*.] [REAVE, ROB.]

A. *Transitive*:

1. *With a person or an animal for the objective*:

†1. *Gen.*: To deprive, rob, or spoil of anything.

† The general sense of the word, though not yet extinct, was formerly much more common than it is now.

"There was never a prince *bereaved* of his dependencies by his council, except there hath been an overgreatness in one counselor."—Bacon: *Essays*.

2. *Spec.*: To deprive of relatives, as a person does who causes the death or departure of any one, or as is done by Death itself personified.

"And Jacob their father said unto them, Me have ye *bereaved* of my children."—Genesis xlii. 36.

† (a) *Bereave* in this sense is followed by the objective of the person deprived of anything, while the thing itself has before it *of* (see examples under 1 and 2); or (b) in poetry the *of* may be omitted:

"Who this high gift of strength committed to me,

In what part lodged, how easily *bereft* me."

Milton: Samson Agonistes.

*II. *With a thing for the objective*: To take away, to remove. In this case that which is reft is put in the objective, and the person or thing losing it is preceded by *from*, or *thence* is used, or some similar word.

"That no new loves impression ever could

Bereave it thence." *Spenser: F. Q.*, V. vi. 2.

B. *Intransitive*:

"... abroad the sword *bereaveth*, at home there is as death."—Lam. i. 20.

† Crabb thus distinguishes between the verbs to *bereave*, to *deprive*, and to *strip*: "To *bereave* expresses more than *deprive*, but less than *strip*, which in this sense is figurative, and denotes a total *bereavement*: one is *bereaved* of children, *deprived* of pleasures, and *stripped* of property: we are *bereaved* of that on which we set most value. The act of *bereaving* does violence to our inclination; we are *deprived* of the ordinary comforts and conveniences of life; they cease to be ours: we are *stripped* of the things which we most want; we are thereby rendered, as it were, naked. *Deprivations* are preparatory to *bereavements*; if we cannot bear the one patiently, we may expect to sink under the other. Common prudence should teach us to look with unconcern on our *deprivations*: Christian faith should enable us to consider every *bereavement* as a step to perfection; that when *stripped* of all worldly goods we may be invested with those more exalted and lasting honors which await the faithful disciple of Christ.

bě-rě-aved, *pa. par. & a.* [BEREAVE.]

bě-rě-ave-měnt, *s.* [Eng. *bereave*; *-ment*.] The state of being deprived of. (Specially used of the loss of relatives by death.)

bě-rě-av-ěr, *s.* [Eng. *bereav(e)*; *-er*.] One who or that which bereaves.

"Yet hast thou lost at once all these, and he thine only *bereaver*."—Speed: *Hist. of Great Britain; The Danes*, an. 787.

bě-rě-av-īng, *pr. par.* [BEREAVE.]

bě-rěft', *pa. par.* [BEREAVE.]

"For to my care a charge is left,

Dangerous to one of aid *bereft*."

—Mosheim: *Ch. Hist.* Note by Reid.

B. *As subst. Ch. Hist. (plur.)*: Berengarians. The followers of Berengarius or those who shared his views regarding the Sacred Communion. Some Berengarians held consubstantiation, but others anticipated the Zwinglian doctrine that the communion elements were only symbols and signs of the body and blood of Christ, and not that body and blood themselves. [BERENGARIANISM.]

Běr-ěn-gär'-ī-ān-īsm, *s.* [Eng. *Berengarian*; *-ism*.]

Ch. Hist. & Theol.: The system of belief held by Berengarius, or Berenger, canon and master of the school at Tours, afterward Archdeacon of Angers, who about the year 1045, or by other accounts 1047 or 1049, rejected the doctrine of the real presence, teaching, according to Mosheim, doctrine identical with that afterward propounded by Zwinglius and Calvin; but documents since discovered have shown that what he held was consubstantiation, the doctrine afterward put forth by Luther, and still maintained by the Lutherans. [CONSUBSTANTIATION.] Though the Church had not strictly defined its belief, yet the great majority of its members held the doctrine of the real presence [TRANSUBSTANTIATION], and the views of Berengarius were condemned in councils in 1050, 1055, 1062, 1063, 1073, 1079, and 1080. Under the influence of fear he mystified, and even recanted, his conscientious belief, but, like Galileo, always returned to it again when the immediate danger was over.

While her husband was fighting in Asia she vowed her hair to Venus, in whose temple it was consequently placed. It was stolen, or else the priests flung it away, and then Conon of Samos at once allayed the annoyance of the king at its disappearance, and made religious capital for the temple, by proclaiming that it had been taken up to the sky and placed among the seven stars in the tail of Leo.]

B. As substantive (pl. *Bernardins*):

Church History: The name given to the Cistercian monks, a branch of the old Benedictines, from the very eminent St. Bernard, who, entering the order, gave it such an impulse that he was considered its second founder. St. Bernard was born at Fontaine, near Dijon, in A. D. 1091; in 1115 became abbot of a Cistercian monastery at Clairval or Clairvaux, in the territory of Langres; in 1127, before the Council of Troyes, advocated the establishment of the Knights Templar; and in 1146 carried out his most notable achievement, inducing the kings of France and Germany to enter on a crusade (the second of the series), which ended, contrary to his expectations, in great disaster. He died in 1153.

His order was revived in 1664 by Armand Jean Bouthelier de Rance, and long flourished under the name of the Reformed Bernardines of La Trappe. (*Mosheim: Ch. Hist.*, Cent. xii., xvii.)

bernicle-goose, **bernacle-goose**, **barnacle-goose**, s. A species of goose, *Anser leucopsis*, sometimes called also *Anser bernicla*. The connection in name with the cirriped called a barnacle was that the bird was supposed to be developed from the cirriped. The Solan-goose was also said to be so developed.

(See examples under BARNACLE.) Gerard, in his *Herbal*, wrote in 1636 as if he had seen the growth of the bird from the cirriped; but the celebrated Ray, in his edition of *Willughby*, published in 1678, rejected the myth, as the French naturalist Belon had done more than a century before. The bernicle-goose has the upper part of the head, neck, and shoulders black; the rest of the upper parts marbled with blue, gray, black, and white; the sides ashy-gray; the lower parts white; the head and tail black. It spends the summer in the northern latitudes, appearing in autumn abundantly on the Atlantic coasts of America and Europe. The food of the bernicle-goose consists chiefly of algæ and the *Zostera marina*.

Compare Arab. *ballār* = crystal (*Catafago*), *ballawr*, *bilawr*=beryl, crystal (*Mahn*); Pers. *bullār*, *bulār*=crystal.]

A. As substantive:

I. Mineralogy:

1. As a genus: A mineral genus, comprehending both the emerald and the beryl properly so called, the former bright emerald-green, from the presence of chromium, and the latter of other colors, from having iron instead of chromium. [EMERALD.] The composition is silica, 66.8; alumina, 19.1; glucina, 14.1=100. The hardness is 7.5-8; the sp. gr. 2.63-2.76. It is in luster vitreous, more rarely resinous. It is brittle, transparent or translucent, and with feeble double refraction. The genus is always crystalline, never in any circumstances massive. Its crystals belong to the rhombohedral system, and are hexagonal prisms, either of regular form or variously modified.

2. As a species: A mineral species consisting of those varieties of the beryl genus which are transparent and colorless, or yellowish-blue, pale green, or rose-red, as distinguished from those which are bright green. The varieties are distinguished by their colors. Pliny recognizes four or five of the following varieties: (1) Colorless. (2) Bluish-green. [AQUAMARINE.] (3) Apple-green. (4) Greenish-yellow to iron-yellow and honey-yellow. It is the ancient *chrysoberyllus*, but not the modern *chrysoberyl*. [CHRYSOBERYL.] Davidsonite falls under this variety. (5) Pale yellowish-green, the ancient *chrysoprasus*, but not the modern *chrysoprase*. [CHRYSOPRASE.] (6) Clear sapphire blue, the *hyacinthozones* of Pliny. (7) Pale sky blue, the *aëroides* of Pliny. (8) Pale violet or reddish. (9) Opaque brownish yellow, of waxy or greasy luster. (10) Colorless or white. [GOSHENITE.] (*Dana*.) Transparent beryls are found in Siberia, India, and Brazil. The best Aquamarine is from Brazil. The beryl is a lapidary's gem.

II. The beryl of Scripture:

1. A gem, the Heb. *Tarshish*, so called presumably as having been brought from one of the two places, perhaps Tartessus in Spain, denominated in Scripture *Tarshish*. It was probably the chrysolite or topaz, though some, with less likelihood, think it was amber. It constituted the fourth row of stones in the high-priest's breastplate. (Exod. xxviii. 20; xxxix. 13. See also Song v. 14; Ezek. i. 16; x. 9; xxviii. 13; Dan. x. 6.)

2. A gem, the rendering of the Sept. *beryllion* in the Septuagint Greek of Job xxviii. 16 and Ezek. xxviii. 13. The Hebrew word is *shoham*, translated "onyx" in those passages, and "onyx-stone" in Gen. ii. 12; Exod. xxviii. 9; xxxv. 9, 27. The species has not been properly identified.

3. The rendering of the Gr. *beryllos*=the beryl (Rev. xxi. 20). It is made to constitute the foundation of the New Jerusalem.

"... the first foundation was jasper . . . the fourth an emerald . . . the eighth beryl."—*Revelations* xxi. 19, 20.

B. As adjective: Of or belonging to the beryl in any of the foregoing senses.

*beryl-crystal, s. An old name for the beryl, presumably derived from the fact that it is always crystalline. [BERYL.]

beryl-like, a. Like a beryl.

"It is scarcely possible to imagine anything more beautiful than the beryl-like blue of these glaciers."—*Darwin: Voyage round the World*, ch. x.

bēr-ŷl'-lī-a, s. [From *beryllium* (q. v.), BeO.] Oxide of *beryllium*=glucina. A light, tasteless, colorless powder, separated from alumina by its solubility in a cold concentrated solution of ammonium carbonate. It is soluble in caustic alkalies. It forms soluble colorless salts, which do not form alums nor give a blue color with cobalt nitrate when tested by the blow-pipe. These salts have a sweet taste, hence the name *glucina*. Beryllium salts are precipitated as beryllia hydrate by (NH₄)₂S; the precipitate is dissolved by long boiling with NH₄Cl.

Bēr-ŷl'-lī-an, s. One of a sect founded in the third century by Beryllus, Bishop of Bozrah, who taught the non-existence of Christ previous to His incarnation, and that at His birth a portion of the Divine nature entered into Him.

bēr-ŷl'-lī-ūm, bēr-il'-lī-ūm, s. [Latinized from Gr. *beryllion*, dim. of *beryllos*=a sea-green mineral, the beryl (q. v.).] Beryllium: symb. Be; at. wt. 9.3. A rare white malleable metal, the same

as Glucinum; sp. gr., 2.1. It does not decompose water. Its melting-point is below that of silver. It is dissolved by caustic potash and dilute acids with the solution of hydrogen. It occurs as a silicate in Phenacite, also in the mineral Beryl along with aluminium silicate. [GLUCINUM.]

" . . . Festus said with a loud voice, Paul, thou art beside thyself."—*Acts xxvi. 24.*

B. As adverb (chiefly, though by no means exclusively, of the form besides): Moreover, over and above; in addition to this, more than that; not of the number, class, or category previously mentioned.

"And the men said unto Lot, Hast thou here any besides?"—*Genesis xix. 12.*

(a) Crabb thus distinguishes between *besides* and *moreover*: *Besides* marks simply the connection which subsists between what goes before and what follows; *moreover* marks the addition of something particular to what has already been said. Thus, in enumerating the good qualities of an individual, we may say, "He is, besides, of a peaceable disposition." On concluding any subject, we may introduce a farther clause by a *moreover*: "*Moreover*, we must not forget the claims of those who will suffer by such a change."

(b) *Besides* and *except* are thus discriminated: *Besides* expresses the idea of addition; *except* that of exclusion. "There were many there besides ourselves;" "No one except ourselves will be admitted." (*Crabb: Eng. Synon.*)

I. Numismatology:

1. Properly, a gold coin struck at Constantinople by the Byzantine emperors, and which, between the ninth and the fourteenth centuries, was the chief gold piece of money known in Europe. It varied in price, ranging from about \$70 to about \$2.16. Other bezants were coined by the Moors of Spain, and others still at Malines, in Flanders. Bezants, chiefly from Constantinople, were circulated in England from the tenth century to the time of Edward III., when they were gradually superseded by the English noble. [NOBLE.] The Constantinople bezant was generally in the form of an umbo, or of a dish, having on it a representation of the Saviour.

2. A white bezant, made of silver, and not of gold, worth, it is believed, about 48 cents. This is the bezant mentioned by Wycliffe and Purvey. That it was circulated in England appears from the extract from the "English Gilds" (about 1389) given below, though the word was sometimes used in a more general sense for any similar piece of money. [BYZANT.]

"... and Y dredynge wente, and hidde thi besaunt in the erthe..."—Wycliffe (*Purvey*): *Matt.* xxv. 25.

"Or what womman hauynge ten besauntis, and if sche hath lost oo besaunt..."—*Ibid.*: *Luke* xv. 8.

*Old Pharmacy:

I. Lit.: A name formerly given to—

(1) A morbid secretion sometimes found in the intestines of the wild goat of Persia (*Capra Aegagrus*), or any other Eastern ruminant. It consisted of a portion of the undigested food of the animal agglutinated into a ball. Its full name was *Lapis bezoar orientale*=Oriental bezoar stone. Not often met with, and having had attributed to it, without a particle of evidence, the power of acting as an antidote to all poisons, as well as curing many diseases, it sometimes fetched in the market ten times its weight in gold. It scarcely need be added that it has disappeared from the modern pharmacopœia of Europe and America, though faith in it still lingers in the East.

(2) A similar concretion from the intestines of the American llamas (*Auchenia llama* and *A. vicugna*). This was known as the *Lapis bezoar occidentalis* (Occidental or Western bezoar stone). It never had quite the reputation of its Eastern compeer, but has shared its fall in being at last contemptuously dismissed from the pharmacopœia of all civilized lands.

***bi nethe, prep. & adv.** [BENEATH.]

bi, as a prefix.

I. Ordinary Language:

(a) *Of Anglo-Saxon origin:* A prefix in many Old (or, more precisely, Middle) English words, which afterward came to be spelled with *be*; as *bicome* for *become*, or *bifore*, *biforn*, *biforen*, for *before*.

(b) *Of Latin origin:* A prefix of which the oldest form was *dui*; as *duidens* for *videns*. This brings it into close union with Lat. *duo*=two; Gr. *dis*=twice, and other cognate words. [Two.] Similarly, the oldest form of Lat. *bis*=twice, was *duis*; as, *bellum* of old was spelled *duellum*. *Bi* in composition signifies two or twice. It corresponds to *di* in Greek, and *dvi* in Sanscrit.

II. Chem.: A prefix before words beginning with a consonant, the form before those commencing with a vowel being *bi*.

(1) *Bi* or *bin* is sometimes used to denote that two atoms of chlorine, sulphur, or oxygen, &c., are united to an element, as *bichloride* of mercury, *HgCl₂*; *bisulphide* of iron, *FeS₂*; *binoxide* of tin, *SnO₂*. Instead of *bi*, the suffix *di* is now generally used; as *carbon dioxide*, *CO₂*.

(2) *Bi* has also been used to denote an acid salt; that is, a salt in which only part of the hydrogen of the dibasic acid is replaced by a metal; as, *bicarbonate* of sodium, *NaHCO₃* (properly called hydric-sodic carbonate); *bisulphate* of potassium, *KHSO₄* (hydric potassic sulphate). These terms are now only used in commerce and pharmacy.

¶ Crabb thus distinguishes between *bias*, *prepossession*, and *prejudice*: "*Bias* marks the state of the mind; *prepossession* applies either to the general or particular state of the feelings; *prejudice* is employed only for opinions. Children may receive an early *bias* that influences their future character and destiny. *Prepossessions* spring from casualties; they do not exist in young minds. *Prejudices* are the fruits of a contracted education. A *bias* may be overpowered, a *prepossession* overcome, and a *prejudice* corrected or removed. "Alle these armes that ther weren,
That they thus on her cotes beren,
For hyt to me were impossible;
Men myghto make of hem a bible,
Twenty foote thykke I trowe."

Chaucer: *House of Fame*, bk. iii.

2. Spec.: Pre-eminently "the book," in comparison with which other literary productions are not worthy to be dignified with the name of books; or, if they be called books, it then becomes "the Book of books." The idea just expressed is founded on the etymology derived originally from the Christian (Greeks, but now rooted in the languages of all the nations of Christendom. The first to use the term *biblia* in this sense is said to have been Chrysostom, who flourished in the fifth century. The word scripture or scriptures, from the Latin *scriptura*=writing, *scripturae*=writings, conveys the analogous idea that the "Scriptures" are alone worthy of being called writings. This use of the word came originally from the Latin fathers, but it has been adopted not merely by the English, but by the other Christian nations of Europe. The high appreciation of the Bible implied in the use of these words arises from the fact that it is believed by the vast majority of Christians to be (with allowances for minute diversities of reading and errors of translation) the actual Word of God, and therefore infallibly true. This is implied, though not expressly stated, in the sixth of the Thirty-nine Articles:

"Holy Scripture containeth all things necessary to salvation; so that whatsoever is not read therein nor may be proved thereby is not to be required of any man that it should be believed as an article of the faith, or be thought requisite or necessary to salvation . . ."

The *Westminster Confession of Faith* is more specific:

"The authority of the Holy Scripture, for which it ought to be believed or obeyed, dependeth not upon the testimony of any man or church, but wholly upon God (who is truth itself), the Author thereof, and therefore it is to be received because it is the Word of God."—*Westminster Conf. of Faith*, ch. i., § 4.

The Church of Rome does not differ from the several Protestant denominations respecting the divine authority of the books which the latter accept as canonical; it combines, however, with them the Apocrypha and church traditions, regarding faith and morals, which Protestants reject.

Articles of Faith and symbolical books do not always express the real belief of all who nominally assent to them; and scattered through the several churches are a very large number of persons who hold that the Bible contains a revelation from God, instead of being of itself "the Word of God;" while a small number deny the Scriptures all special inspiration, and deal with them as freely as they would with the Mohammedan Koran, the Hindoo Vedas and Puranas, the Sikh Grunth, or the Persian Zend Avesta.

The Bible consists of sixty-six books, constituting an organic whole.

In the Authorized English Version the Bible is divided into the Old and New Testaments, the former containing thirty-nine, and the latter twenty-seven books. These designations are taken from *antiquum testamentum*, in the Vulgate rendering of 2 Cor. iii. 14 and *novum testamentum* in verse 6. The Greek word is *diathēkē*, the Septuagint name of the Old Testament being *Hē palaia diathēkē*=the *Old Diatheke*, and the Greek New Testament being termed *Hē kainē diathēkē*=the *New Diatheke*. *Diathēkē* in classical Greek, and in Heb. ix. 16, 17, signifies a testament or will, but generally, throughout the Septuagint, the Greek Testament, and the Greek ecclesiastical writers, it means a covenant. Hence the two primary divisions of the Bible had better have been called the Old and New Covenants, rather than the Old and New Testaments. The old covenant is the one made with Adam, or that entered into with Abraham, and subsequently developed at Sinai; the new one that formed in connection with the advent and death of Christ.

The Old Testament was originally written in Hebrew, except Jer. x. 11; Ezra iv. 8 to vi. 18; vii. 12 to 26; and Dan. ii. from middle of verse 4 to vii. 28, which are East Aramaean (Chaldee). The New Testament was originally written in Greek, with the exception, perhaps, of St. Matthew's Gospel, which the Christian fathers, Papias, Irenæus, Pantænus, Origen, Jerome, &c., state to have been published originally in Aramaean.

The order of the books in the Hebrew Bible is different from that which obtains in the English Scriptures, which in this respect follow the Greek Septuagint and the Latin Vulgate. The Jews divided the Old Testament primarily into three portions, called the Law, the Prophets, and the Kethubim, or, in Greek, the Hagiographa. The Divine Redeemer alludes to this classification in Luke xxiv. 44, ". . . that all things might be

fulfilled which are written in the Law, and in the Prophets, and in the Psalms." The Psalms are the first book in the Hagiographa, and agreeably to the Jewish method of quoting, stand for the whole division. Such words as Genesis, Exodus, Deuteronomy, &c., are Greek, and taken from the Septuagint; the Hebrew generally names these and some other books by their initial word. Thus Genesis is called *Bereshith*=In the beginning. The following list exhibits the order and classification of the books in the Hebrew Bible:

I. *Torah, the Law*: Genesis, Exodus, Leviticus, Numbers, and Deuteronomy.

II. *Nebi'im, the Prophets*:

(1) *The former prophets*: Joshua, Judges, Samuel, Kings.

(2) *The later prophets*:

(a) *The great prophets*: Isaiah, Jeremiah, Ezekiel.

(b) *The small or minor prophets*: Hosea, Joel, Amos, Obadiah, Jonah, Micah, Nahum, Habakkuk, Zephaniah, Haggai, Zechariah, Malachi.

III. *Kethubim*=books; in Greek *Hagiographa*=Holy Writings:

(1) *Truth*: Psalms, Proverbs.

(2) *The five rolls*: Job, Song of Solomon, Ruth, Lamentations, Ecclesiastes, Esther, Daniel, Ezra, Nehemiah, Chronicles.

It is startling to find that in this arrangement Daniel does not figure among the prophets, but is relegated to the Hagiographa. It is remarkable also that Joshua, Judges, Samuel, and Kings are classified, not as historic, but as prophetic writings.

A convenient classification for modern use divides the Old Testament books into three classes:

(1) *The Historical Books*: Genesis—Ezra.

(2) *The Poetical Books*: Job—Song of Solomon.

(3) *The Prophetical Books*: Isaiah—Malachi.

(The weak point about this division is that most of the prophetical books falling under the third category were written, not in Hebrew prose, but in poetry.)

A similar division for the New Testament is into—

(1) *Historical Books*: Matthew—The Acts of the Apostles.

(2) *Epistles*: Romans—Jude.

The Bible has given rise to several sciences of its own, and specially to the following:

(1) *Apologetics*, not a good name, for it is liable to be misunderstood. The word is used in the Greek sense of defense; the Christian apologist does not admit the existence of error in the Bible which he defends. [APOLOGETICS, APOLOGY.]

(2) *Biblical Criticism*, which seeks to ascertain precisely what books are inspired, and bring the text of these to the most perfect state of purity. [BIBLICAL CRITICISM.]

(3) *Hermeneutics*, from the Gr. *hermeneutikos*=of or for interpreting; its aim is to ascertain the principles which should be followed in biblical interpretation. [HERMENEUTICS.]

The Old Testament is said to have been collected and arranged by Ezra between 458 and 450 B. C. The Apocrypha are considered inspired writings by the Roman Catholics, but not by the Jews and Protestants.

The most ancient copy of the Hebrew Scriptures existed at Toledo, called the Codex of Hillel; it was of very early date, probably of the fourth century after Christ; some say about sixty years before Christ. The copy of Ben Asher, of Jerusalem, was made about 1100.

The reputed oldest copy of the Old and New Testament in Greek, is that in the Vatican, in Rome, which was written in the fourth or fifth century. Mai's edition appeared in 1857. The next in age is the *Alexandrian Codex* (referred to the fifth century), in the British Museum, presented by the Greek patriarch to Charles I. in 1628. It has been printed in England, edited by Woide and Baber, 1786—1821. *Codex Ephraemi*, or *Codex Regius*, ascribed to the fifth century, in the Royal Library, Paris, published by Tischendorf in 1843.

Curiosities of the Bible: The Bible contains 3,566,480 letters, 773,746 words, 31,173 verses, 1,189 chapters, and 66 books. The word "and" occurs 46,277 times. The word "Lord" occurs 1,855 times. The word "reverend" occurs but once, which is in the ninth verse of the 111th Psalm. The middle verse is the eighth verse of the 118th Psalm. The twenty-first verse of the seventh chapter of Ezra contains all the letters of the alphabet except the letter J. The nineteenth chapter of 2 Kings and the thirty-seventh chapter of Isaiah are alike. The longest verse is the ninth verse of the eighth chapter of Esther. The shortest verse is the thirty-fifth verse of the eleventh chapter of St. John. There are no words or names of more than six syllables. In the original Hebrew manuscripts of the Old Testament, a division of the matter into paragraphs was early introduced for convenience in reading. Larger divisions into sections suitable for Sabbath readings were made about the middle of the fifteenth century. The gospels were divided into sections for a similar purpose as early as the third century. The present arrangement of the Scriptures—the division into chapters—has been ascribed to Archbishop Lanfranc in the eleventh, and to Archbishop Langton in the thirteenth century; but T. Hartwell Horne considers the real author to have been Cardinal Hugo de Sancto Caro, about the middle of the thirteenth century. The division into sections was commenced by Rabbi Nathan (author of a Concordance) about 1445, and completed by Athras, a Jew, in 1661. The present division into verses was introduced by the celebrated printer, Robert Stephens, in his Greek Testament (1551) and in his Latin Bible (1556-7).

The word "heaven" occurs the following number of times in each of the books of the New Testament: Matthew, 70; Mark, 17; Luke, 30; John, 18; Acts, 24; Romans, 2; 1 Corinthians, 2; 2 Corinthians, 2; Galatians, 1; Ephesians, 3; Philippians, 2; Colossians, 5; 1 Thessalonians, 2; 2 Thessalonians, 1; Hebrews, 5; James, 2; 1 Peter, 3; 2 Peter, 1; 1 John, 1; Revelations, 56.

The various names of Satan used in the Bible: The Greek word *diabolos* is the one we derive the name "devil" from, and its meaning is "slanderer." It corresponds to the Hebrew "Satan," which signifies "adversary," as that being or power is understood to be the adversary of God or man, the foe of goodness and the author of evil. The references to Satan in the Scriptures are numerous, but this name only occurs five times in the Old Testament and twenty-five times in the New Testament. The word "devil" occurs twenty-five times; "the prince of this world," three times; "the wicked one," six times; "the tempter," twice, and in the twelfth chapter of Revelations, ninth verse, "old serpent," "the devil," and "Satan" occur, a most remarkable grouping of epithets, as also in Rev. xx. 1, 2, and 3. The names "evil one," "god of this world," "prince of the power of the air," "the dragon" going about "like a roaring lion" occur, and the Master himself describes him as a "murderer and liar." He is a "strong man" (Matt. xii. 29), and his subtlety (Gen. iii. 1) is exhibited in treacherous snares (2 Tim. ii. 26), wiles (Eph. vi. 11), and devices (2 Cor. ii. 11), and the delusive shift of transforming himself into an angel of light (2 Cor. xi. 14). He became an apostate (John viii. 44), and fell from heaven (Luke x. 18, and Jude 6), and from his place of power he will eventually be overthrown (Rev. xx. 1, 2, 3 and 10). The name of Beelzebub was also in common use among the Jews in the time of Christ, as a title of Satan, or "the prince of the demons."

For the several versions of the Bible see VERSIONS and AUTHORIZED. Altogether apart from the claims put forth by the Bible to be a, or rather the, Divine Revelation, the Authorized version is the first English classic; and the history of Europe and the world would be a hopeless enigma to any one who knew nothing of the Bible.

"Yon cottager, who weaves at her own door,
Pillow and bobbins all her little store,

* * * * *
Just knows and knows no more her Bible true:
A truth the brilliant Frenchman never knew;
And in that charter reads, with sparkling eyes,
Her title to a treasure in the skies."

Cowper: *Truth*.

Bible-oath, s.

An oath sworn upon the Bible.

Bible Society. Any society constituted for multiplying copies of the Bible and, as far as the financial resources at its disposal will permit, diffusing them abroad. Of these societies the following may be enumerated:

1. *American Bible Society:* The American Bible Society was established in 1818. Sixty delegates, from twelve states of the Union, met in New York City and organized the society. Its purpose was to supply America with the Word of God, and then to spread the light of the knowledge of the glory of God through the heathen world. The issues for 1896-97 were 513,496 copies, and for the eighty-one years of its existence 63,219,540 copies. Four times during its history—in 1829, 1856, 1866 and 1882—a general supply of Bibles was issued, with the view of placing the Bible in every home in America. In the first twenty-five years of its history, 2,798,366; second twenty-five years, 18,987,210; third twenty-five years, 32,448,136; total, 54,233,712. In addition to this, millions of Bibles have been issued to distant lands. The headquarters of the society are in New York City.

2. *The British and Foreign Bible Society:* As there were brave men before Agamemnon, so the Word of God was circulated before this great society came into existence. The following associations made the circulation of the Scriptures one of the objects at which they aimed: The Society for the Propagation of the Gospel in New England, incorporated in 1649, and again in 1661; the Society for Promoting Christian Knowledge, established in 1698; the Society for the Propagation of the Gospel, established in 1701; the Society in Scotland for Propagating Christian Knowledge, incorporated in 1709; the Society at Halle, founded in 1712; the Society for Promoting Religious Knowledge among the Poor, established in 1750; and finally, the Society for the Support and Encouragement of Sunday-schools, established in 1785. Two societies made it their primary aim, viz: The Bible Society for Soldiers and Sailors, established in 1780, and the French Bible Society, commenced in London in 1792, its object being the circulating of the Scriptures in France. But with all that was done by these organizations, Bibles were both costly and difficult to obtain. Nowhere was this spiritual dearth felt more keenly than in Wales, which, after having bought up an edition of 10,000 Welsh Bibles and 2,000 Testaments, issued in 1796, still felt its wants but partially supplied. The Society for Promoting Christian Knowledge, which had published the edition which had gone off so well, had not enterprise enough to follow it up with another, though strongly urged to incur the not very formidable risk.

On December 7, 1802, Mr. Joseph Tarn introduced the subject of the scarcity of Bibles in Wales, at a small gathering of Christian friends in London. On this a celebrated Evangelical clergyman, the Rev. Mr. Charles, of Bala, in the Principality, who was present, and had been impressed by hearing, shortly before, from a Welsh girl that she was in the habit of journeying over the hills seven miles every week to obtain a sight of the sacred volume, proposed that a subscription should be set on foot for printing the Bible for circulation in Wales. The Rev. Joseph Hughes, a Baptist minister, suggested as an amendment that the intended effort should not be for Wales simply, but for all the world. From this small germ the great Bible Society sprang. It came into existence in 1803, under the name of "The Society for Promoting a more extensive Circulation of the Scriptures both at Home and Abroad." Next year, on March 7, 1804, it was more formally constituted at a meeting held in the London Tavern, Bishopsgate, its too lengthened designation being exchanged for the briefer and more telling one which it still retains, *The British and Foreign Bible Society*. Its rise to power was rapid. On March 28, 1809, an auxiliary Bible Society was established at Reading, and many similar auxiliaries or branches soon followed in other places. The only serious check which the great parent institution ever sustained was in connection with the Apocryphal Controversy, which raged between 1821 and 1826. [APOCRYPHAL CONTROVERSY.] This being at length happily settled, the society's prospects became again unclouded, and the sphere of its operations rapidly extended year by year.

Up to March 31, 1880, it had taken a more or less direct share in the translation, printing, or distribution of the Scriptures in 233 languages or dialects, the number of versions being 282; and had put into circulation more than 88,000,000 Bibles, Testaments, or Scripture portions, at an expense of above £3,500,000. During the year ending March 31, 1880, there were issued from its depôts at home or abroad 2,780,362 copies of the Bible in whole or in part. The total distribution of Bibles by the British and Foreign Bible Society, for the ninety-four years of the society's existence, aggregates 151,142,802 copies.

3. *The German Bible Society*, formed at Nuremberg in 1804, and afterward transferred to Basle.

4. *The Prussian Bible Society*, so named in 1814, developed out of the Berlin Society, formed in 1804 or 1805.

5. *The Hibernian Bible Society*, formed in 1806.

6. *The Philadelphia Bible Society*, the first in the United States, founded in 1808.

7. *The City of London Bible Society*, founded in 1812.

8. *The Russian Bible Society*, established under the auspices of the Emperor Alexander in 1813, but suppressed in 1826 by his successor, Nicholas, the antagonist of the Allies in the noted Crimean war.

9. *The American Bible Society*, founded in 1816. It has now many auxiliaries in connection with it.

10. *The Trinitarian Bible Society*, founded in 1831.

11. *The National Bible Society of Scotland*, founded in 1860, with which the Edinburgh Bible Society (1809) and the Glasgow organization (1812) are now incorporated.

Bible societies, though wide in their constitution, are practically Protestant institutions; and on June 29, 1816, a bull denouncing them was launched by Pope Pius VII.

biblical archaeology. Biblical antiquities; antiquities illustrative of the Bible.

[*Society of Biblical Archaeology:* A society founded in London on December 9, 1870, "for the investigation of the Archaeology, History, Arts, and Chronology of Ancient and Modern Assyria, Palestine, Egypt, Arabia, and other Biblical Lands; the promotion of the study of the Antiquities of those countries, and the Record of Discoveries hereafter to be made in connection therewith." The association has already risen into great power and reputation. It was before this society that Mr. George Smith, on December 3, 1872, read his paper on "The Assyrian Account of the Deluge," translating the celebrated "Deluge Tablet." That evening the attendance at the meeting, then ordinarily about fifty, rose to about 800.

biblical criticism. The science which has for its objects (1) to decide which books are entitled to have a place in the Scripture canon [*CANON*]; and (2) to bring the text of these canonical books to the utmost possible degree of purity.

In prosecuting the first of these aims, the biblical critic must not be confounded with the Christian apologist; the function of the former is a strictly judicial one, while the office of the latter is that of an advocate.

One important subject of investigation is as to what Old Testament books were recognized as divine by the ancient Jewish church or synagogue; as also what New Testament books were at once and universally welcomed by the early Christian church [*HOMOLOGOUMENA*]; and what others were for a time partially rejected, though they ultimately found acceptance everywhere. [*ANTILEGOMENA*.]

In seeking to purify the text, the biblical critic must do much toilsome work in the collation of "codices" or manuscripts. [*CODEX*.] He does not put the whole of these on one level and admit whatever reading has a majority of MSS. in its favor;

but attempts to test the value of each one apart, forming an hypothesis if he can as to when, where, and from whom it emanated, and from what other MSS. it was copied at first, or, in technical language, to what "recension" it belonged. [*RECENSION*.] Those which he values most for New Testament criticism are the *Codex Sinaiticus*, written probably about the middle of the fourth century; and the *Codex Alexandrinus* and *Codex Vaticanus*, dating, it is believed, from about the middle of the fifth century.

Subjoined is a list of a few of the chief passages in the New Testament on which biblical critics have thrown doubt: Mark xvi. 9-26; John v. 4; viii. 1-11; Acts viii. 37; 1 John v. 7, and perhaps the doxology appended to the Lord's Prayer, "For thine is the kingdom." &c. (Matt. vi. 13.) These omissions will not overthrow any theological doctrine held by the churches.

bib'-lī-ō-grāph'-ī-cal-lŷ, adv. In a bibliographical manner, as is done by a bibliographer or in bibliography. (*Dibdin*.)

bib'-lī-ōg'-raph-ŷ, s. [In Ger. & Fr. *bibliographie*; Sp. & Ital. *bibliografia*; Port. *bibliographia*; Gr. *bibliographia*=the writing of books. [*BIBLIOGRAPHER*.] The science or knowledge of books, their authorship, the dates of their first publication, and of the several editions they have gone through, with all other points requisite for literary history. This, it will be perceived, is not the meaning of the word in Greek. (See *etym. of bibliography and bibliographer*.) The Greek term generated the French *bibliographie*, with the meaning (identical with neither the Greek nor the English one) of acquaintance with ancient writings and skill in deciphering them. About A. D. 1752 the modern sense of the word was arising, though the old one still held its ground. Finally, in 1763, the publication of De Bure's *Bibliographie Instructif* established the new meaning, and gave the death-blow to the old one. It was not the first book which had appeared on literary history, Conrad Gesner's *Bibliotheca Universalis*, containing a catalogue of all the Hebrew, Greek, and Latin books he knew, had long preceded it, having appeared in 1545. Among the standard works on Bibliography may be mentioned Watt's *Bibliotheca Britannica*, published in England in 1824; and Lowndes' *Bibliographer's Manual*, published in the same country in 1834. The Catalogue of the Library of Congress or of any other library is a bibliographical production; so, also, is every publisher's circular.

"Bibliography is a matter of business, and must be left to private enterprise."—*Letter of J. Whitaker, in London Times*, February 27, 1874.

Chem., and

Phar.: A name given to the acid carbonates of potassium, sodium, &c., or to hydric sodium carbonate (NaHCO_3), hydric potassium carbonate (KHCO_3), &c. Also to a carbonate dissolved in water containing carbonic acid gas, as carbonate of calcium thus dissolved, reprecipitated on boiling. Bicarbonate of potassium, KHCO_3 , is obtained by passing CO_2 gas through a saturated aqueous solution of K_2CO_3 (potassium carbonate). It crystallizes in colorless rhombic non-deliquescent crystals, which are soluble in four times their weight of water. It does not give a precipitate with BaCl_2 in the cold. Bicarbonate of potassium is a direct antacid, and is employed in the treatment of acute rheumatism, and for removing uric acid from the system.

bicarbonate of sodium. NaHCO_3 , hydrogen sodium carbonate, obtained by exposing carbonate of sodium to the action of CO_2 , carbonic acid gas, which is liberated from limestone by hydrochloric acid; the gas is absorbed by the crystals of the $\text{Na}_2\text{CO}_3 \cdot 10\text{H}_2\text{O}$, which lose their water of crystallization and become opaque. Bicarbonate of sodium is used as an antacid; it is supposed to influence the secretions of the liver, and not to produce nausea like the potassium salt. It is used in the manufacture of effervescing powders and drinks, which are usually a mixture of this salt with tartaric acid, and also enters into the composition of baking-powders.

bī-chlōr'-īde, *s.* [Lat. prefix *bi*=two, and *chlōr-īde* (q. v.).]

Chem.: A term used in chemistry to denote a compound containing two atoms of chlorine, which are united to an atom of an element, as $Hg^{++}Cl_2$ (bichloride of mercury), or to an organic radical, as $(C_2H_5)_2Cl_2$ (ethylene bichloride). These are usually called *dichlorides*, as ethylene dichloride.

bichloride of mercury.

Phar.: $Hg^{++}Cl_2$, also called perchloride of mercury, or corrosive sublimate. It is prepared by heating a mixture of mercuric sulphate, $HgSO_4$, with dry chloride of sodium, $NaCl$, and black oxide of manganese, MnO_2 ; the corrosive sublimate sublimes; hence its name. Bichloride of mercury occurs in heavy white masses of prismatic crystals; it is soluble in twenty parts of cold water, also in alcohol and ether. (For tests see *MERCURIC*.) It is a very powerful irritant—when taken in large doses it causes vomiting and purging. It is very poisonous; the best antidote is white of egg. It corrodes the skin; it is employed in very small doses as an alterative in skin diseases, externally as a lotion, injection, or gargle in chronic skin diseases, ulcerated sore throats, and chronic discharge from the mucous membranes. $HgCl_2$ is a powerful antiseptic; it is used to preserve anatomical preparations. Ammonia added to $HgCl_2$ throws down white precipitate, NH_2HgCl , which is used in pharmacy in the form of ointment.

bichloride of gold.

Phar.: $Au^{++}Cl_2$ is a substance which has recently risen into notoriety on account of the alleged successful use made of it by Dr. Keeley of Dwight, Ill., in the cure of dipsomania and chronic alcoholism. Its general characteristics chemically, posologically, and in physiological action are to a great extent similar to those of mercury bichloride. Its employment by Dr. Keeley has produced a profound impression on the medical world, and many advocates both for and against its virtues exist. The success, from a financial standpoint, of the Dwight sanitarium, in the meantime, has induced many imitators and much harm has been done by unskillful persons using this dangerous and most powerful medicinal agent. bi'-cŷ'-cle, *s. & a.* [From Lat. prefix *bi*, and Gr. *kyklos*=a ring, a circle, a round.]

A. As subst.:

A two-wheeled vehicle, having the wheels arranged in line one before the other. In the modern safety bicycle the two wheels are of the same or nearly the same size, and the driving mechanism consists of pedal cranks, communicating usually by means of a sprocket and chain, or a shaft and bevel gear, with the rear wheel. In the latter case the vehicle is termed a *chainless bicycle* (q. v.).

¶ The bicycle has rapidly assumed an important place as a means of locomotion, and having been found available for military use, there are now attached to the armies of several countries, completely drilled and equipped bicycle corps. The bicycle corps of the French army are provided with folding wheels, which can be placed upon the back and be carried with ease. Rapidity and silence of movement are important points in their favor.

“In the maneuvers of 1896 (of the French army at St. Quentin), it was noticed that cavalry advancing with the greatest care could be heard and observed much sooner than wheelmen. The company of bicyclists in the maneuvers of that year was termed the “phantom company,” because it so unexpectedly appeared before the enemy. I noticed the bicyclists at all the reviews I saw (in Russia, Germany, and France), though not in so large a body as in the French army. In the German army they are attached to all the staffs as couriers, and, in small numbers, to almost every battalion, where they are used as scouts and patrols. In fact, the value of the wheel to an army is beginning to be recognized everywhere. Whoever first places 25,000 or 50,000 men on bicycles will have a decided advantage in the next war over his opponent, and, perhaps, compel him to resort to the same tactics.”—General Nelson A. Miles, in *McClure's Magazine* for August, 1898. [CYCLE.]

B. As adj.: Pertaining to, or connected with, or referring to the machine for locomotion described under A.

Icel. *bidja*, *beitha*=to pray; Dut. *bidden*=to pray; (N. H.) Ger. *bitten*=(1) to request, to ask; (2) to ask, to invite; O. H. Ger. *bitjan*; Goth. *bidjan*, *bidan*. Compare Lat. *peto*=to beg, beseech, ask. Though Bosworth gives command as one of the secondary significations of A. S. *biddan*, yet, as the common A. S. word for command is *beodan*, and there are similar duplicate terms in the other Teutonic languages, we follow Wedgwood and Skeat in separating this *bīd* from the one which follows.] [BID (2).]

1. To pray, to ask, to entreat.

“Alle he fellen him thor to fot
To bethen meth and bedden oc.”

Story of Genesis and Exodus, 2,497-8.

“... Lord, undigne and unworthy
I am to thilk honor that ye me *bede*.”

Chaucer: *Canterbury Tales*, 8,235-6.

¶ To bid beads or bedes:

(2) **Subsequently:** To count the beads of a rosary, each bead dropped passing for a prayer. (Nares.) [BEAD, BEDE, BIDDING.]

2. To care for, to value.

bīd-prayer, *s.* [BIDDING-PRAYER.]

bīd (2), ***bīdde** (2), ***bŷd'**, ***bīde**, ***bede** (pret. *bade*, *bīd*, **bad*, **badde*; *pa. par.* *bīd*, *bīdden*, **bŷdden*), *v. t.* [A. S. *beodan*, pret. *bead*, *pa. par.* *boden*=to command, order, bid, will, offer, enjoy. (Bosworth.) In Icel. *bioda*; Sw. *bjuda*=to bid, to command; Dan. *byde*, *both*=to offer, to invite; Dut. *bieden*, *gebieden*=to offer, to tender; Ger. *bieten*=to offer, tender, present; *gebieten*=to command, to order; O. H. Ger. *biutan*, *biotan*; Goth. *biudan*.]

1. To command, to order, to enjoin.

(a) **Literally:**

“... slack not thy riding for me except I *bīd* thee.”

3. To announce, to declare.

(1) **Publicly:**

Spec.: To proclaim, to announce by means of a public functionary, or at least publicly.

(a) **In a favorable sense:** To announce to friends and the public.

¶ To bid one's banns: To announce one's banns.

“Our bans thrice *bīd*! and for our wedding day
My kerchief bought! then press'd, then forc'd away.”
Gay.

(b) **In an unfavorable sense:** To denounce; to proclaim publicly with hostile feeling or intent.

“Thyself and Oxford, with five thousand men,
Shall cross the seas, and *bid* false Edward battle.”
Shakesp.: *Henry VI.*, iii. 3.

¶ Thus it is often used in the phrase to bid defiance to, meaning to defy openly.

“Of nature fierce, untamable, and proud,
He *bids* defiance to the gaping crowd.”

Granville.

(2) **Privately:** To declare, to pronounce in the domestic circle.

“... pray you, *bid*
These unknown friends to 's welcome.”

Shakesp.: *Winter's Tale*, iv. 3.

¶ Probably such phrases as “to bid one God speed” (2 John 10), and “to bid one farewell” (Acts xviii. 21), are a modification of this meaning, though the opinion of Johnson is worth consideration that they may mean to pray God that one may speed well, to pray that one may fare well, in which case the verb *bīd* is No. 1, and not No. 2.

4. To offer, to make a tender; to announce what price one is prepared to give for a specified article. (Used especially in connection with auctions.) (Lit. & fig.)

“To give interest a share in friendship, is to sell it by inch of candle; he that *bids* most shall have it.”—Collier: *Friendship*.

Comm.: An alloy made at Biddery or Bidar. Dr. Heyne states its proportions as: Copper, 8; lead, 4; tin, 1. To three ounces of this alloy sixteen ounces of zinc are added when the alloy is melted for use. It is colored by dipping into a solution of sal-ammoniac, saltpeter, common salt, and sulphate of copper. This colors it, and the color forms a ground for the silver and gold inlaying. Chisels and gravers are employed, and after the inlaying is complete, the ware is polished and stained. Another formula gives: Zinc, 128; copper, 16; lead, 4; tin, 2. (*Knight, &c.*)

2. The marrying of a widow.

3. The marrying of a woman who, though not ceremonially wedded, has still allowed some one to have intercourse with her. If bigamy of any of these kinds were committed, the offender could not take holy orders.

II. *English Law*: The act of marrying a second time, while the first husband or wife is still known to be living. By a law passed in 1276, it was punished with death. In 1603, during the reign of James I., it was made felony, without benefit of clergy. By a law passed in 1794, the capital penalty was modified into imprisonment or transportation. If a person marry a third wife, while the first two are still living, poverty of language in this portion of the law makes the offense still be called only bigamy; polygamy would be a more accurate designation.

The statutory provisions in the United States against bigamy or polygamy, are in general similar to, and copied from the statute of James I., excepting as to punishment. New York state, through the operation of conflicting claims as to jurisdiction of the tribunals of different states of the Union, etc., allows bigamy under certain conditions, those conditions being generally the outcome of antagonistic provisions of the marriage laws of the different commonwealths.

¶ *Digamy* signifies simply a second marriage; bigamy implies that such a marriage takes place while the first wife is still alive. [DIGAMY.]

big-nō-nī-a, s. [In Fr. *bignone*; Dut., Sp., Port., & Ital. *bignonia*. Named after Abbé Bignon, librarian to Louis XIV., and patron of the botanist Tournefort.]

Bot.: A genus of plants (that of the trumpet flowers), constituting the typical one of the order Bignoniaceæ or Bignoniads. It has four perfect stamina, two long and two short. The species, which are numerous, are nearly all of an ornamental character, owing to their fine, large, trumpet-like, monopetalous corollas, colored red, blue, yellow, or white. They are trees or shrubs, in the latter case often climbing; found in, or sometimes even beyond, the tropics of both hemispheres, and constituting a feature in the flora of the regions which they inhabit. Many are from the warmer parts of this country. India also has various species. One of the latter, the *Bignonia Indica*, called in the Bombay presidency Taetoo, has supra-decompound leaves, from four to six feet long, panicles of flowers about five to six feet long, and legume-like capsules more than two feet long by three and a half inches broad. Numerous bignonias have been introduced into the hot-houses and greenhouses of this country, and several of the hardier sort will grow in the open air in the middle temperate latitudes.

big-nō-nī-ā-çē-æ (*R. Brown, Lindley, &c.*), **bignoniæ** (*Jussieu*) (both Latin), **big-nō-nī-ādş** (*Eng.*), s. [*BIGNONIA*.]

Bot.: An order of plants, ranked by Dr. Lindley as the type of his Bignonial Alliance. The stamina are five, but always one and sometimes three are abortive, so as to make the species tetradynamous or diandrous plants. The ovary is two or spuriously four-celled and polyspermous. The capsule is two-celled, and sometimes so long as to appear like a legume. The inflorescence, which is terminal, is generally somewhat panicled. The leaves are mostly compound. The bignoniads are trees or shrubs, as a rule climbing. They are highly ornamental plants from the tropics of both hemispheres.

big'-öt, s. & a. [In Dan. *†bigot* (s.); Ger. *bigott* (a.); Fr. *bigot* (the modern sense of the word not arising till the fifteenth century); Low Lat. *bigoti*, *pl.* A word for which a superfluity of etymologies has been given. It is deeply rooted in only the English and French tongues. Barbazan, Malone, and Michel consider it a corruption of the word *Visigoth*, which might become *Visigot*, *Bisigot*, *Bigot*, a view which Littré thinks probable. According to an old chronicle quoted by Du Cange, Rollo, the first Duke of Normandy, being required to kiss the foot of King Charles, as having received Neustria in fief, contemptuously replied, "*Ne se, Bigot!*"=Not so, by God. Hence the King and court nicknamed him Bigoth. Littré, however, thinks

it probable that this story was invented to explain the word. Wace, as quoted by Du Cange, says that the French called the Normans *bigoz* or *bigos*. Cotgrave affirms that *bigot* is an old Norman word=for God's sake. Bullokar (ed. 1656) thus defines it: "*Bigot*, an hypocrite; also a scrupulous or superstitious person. The word came into England out of Normandy, where it continues to this day in that sense." Trench derives the word from Sp. *bigote*=a mustachio, and supposes that the people of that nation, wearing on their lips the hirsute appendages now spoken of, while the other nations of Europe had smooth faces, came to be called *bigots*, that is, men of the mustachio. Standing afterward as the type of religious intolerance, they so degraded the word *bigot* that it came to have its present meaning. (*Trench, on the Study of Words*, 2d ed., pp. 80-82.) A number of authors derive *bigot* from the Franciscan tertiaries called *Begutta*, *Biguttæ*, *Beguineæ*, *Beguins*, or in Ital. *Bizochi*, the latter-named word being from *bigio*=russet-gray, brown, which was the color of the habit they wore. To this view Wedgwood assents, while Skeat considers that Wace's statement given above indicates the correct etymology. He believes *bigoz* or *bigos* to be of Scandinavian origin, though its modern signification has come from its application to the Beguins or Beguttæ.] [*BEGUIN*, *BEGUTTÆ*.]

bīl'-bēr-rŷ (Eng.), blāe'-bēr-rŷ (Scotch), s. & a. [In Sw. *blabär*; from *blā*=blue-black, which the berry is; Icel. *blaber*; Dan. *blaabær*. The origin of the Scotch word *blaeberry* is obviously from these terms. The English form of the word *bil* may be, as Mahn believes, a corruption of the same word; if so, then it is=blue berry. Wedgwood believes, and Skeat considers, however, it may have come from Dan. *böllebær*=not the *Vaccinium Myrtillus*, but the *V. uliginosum*. The former thinks *bolle* may be=bull, while the latter deems it to be=ball.]

A. As substantive:

1. The name given to one or two species of *Vaccinium*, a genus of plants belonging to the order Vacciniaceæ (Cranberries). It is especially used of the *Vaccinium Myrtillus*, called also the Whortleberry. It has angular stems, drooping, urceolate, almost waxy flowers, greenish with a red tinge, and black berries very pleasant to the taste. It grows in woods and healthy places. The *Great Bilberry* or *Bog Whortleberry* is an allied species with rounded stems, smaller flowers, and less agreeably-tasted fruit. It grows in mountain bogs. It is called also the *Bleaberry* or *Blaeberry*.

2. The fruit of the species described under No. 1. That of the *Bilberry* properly so called is eaten in the places where it grows, either as it is or with milk. It is made also into jellies and tarts. It is astringent, and may be used in diarrhoea and dysentery. The fruit of the *V. uliginosum* is acid, and produces giddiness and headache when eaten in too large quantity.

"... as blue as *bilberry*."—*Shakesp.: Merry Wives of Windsor*, v. 5.

bile, *s. & a.* [In *Dau. byld*; Fr. & Port. *bile*; Sp. & Lat. *bilis*=bile; Lat. *fel*=the gall bladder, gall, bile.]

A. *As substantive:*

1. *Physiol. & Ord. Lang.*: An animal fluid secreted by the liver. It is collected from venous and not from arterial blood. It is a viscid transparent liquid of a very deep yellow or greenish color, darkening by exposure to the air. Its odor is disagreeable; its taste nauseous and bitter. It has an alkaline reaction. Strecker has shown that it is essentially a mixture of two acids, the glycolic and the taurocholic acid, the first containing nitrogen without sulphur and the latter having both. The principal coloring matter of the bile is called bilirubine or cholepyrrhine. In 1,000 parts it contains—

Water	from 823 to 908 parts.
Solid matter	" 177 to 92 "
Bile-acids with alkali.	" 108 to 56 "
Fat and cholesterine.	" 47 to 40 "
Mucus and coloring matter	" 24 to 15 "
Ash	" 11 to 6 "

When the bile is elaborated in the liver, it is received from the secreting vessels by very minute tubes, which uniting form the hepatic duct. The bile is conveyed into the gall-bladder by means of the cystic, or into the duodenum by the choledoch duct; that which makes its way into the former receptacle is called the *cystic bile*, and that which enters the latter the *hepatic bile*. *Cystic bile* is deeper in color and more viscid, pungent, and bitter than *hepatic bile*. One main use of bile is to convert chyme into chyle as one step in the process of digestion.

"In its progression, soon the labor'd chyle
Receives the confluent rills of bitter *bile*;
Which, by the liver sever'd from the blood,
And striving through the gall pipe, here unload
Their yellow streams."
Blackmore.

B. Of the forms bill, *bil, and *bylle: This second use of the word is so rooted in the Teutonic languages as compared with the limited extent that the signification A. obtains among them, that it may be the primary one. On the other hand, it is difficult to resist the belief that such an instrument as a pick-ax was imitated from a bird's beak, in which case the relative arrangement of A. and B. would be as it is here made.

1. Mechanics:

(1) A pick-ax, a mattock.

(2) The point of a hook.

2. Military:

(1) A species of halberd, consisting of a broad blade, with the cutting part hooked like a woodman's bill-hook, and with a spike both at the back and at the top. It was mounted on a staff about six feet long. It was known as a "Black Bill" from the color of the varnish used to protect it from rust, and was largely used by infantry soldiers. Out of a levy of 200 men, in 1584, for the Irish wars, one-fourth were ordered to be furnished with "good Black Bills." The armament of the *Mary Rose* contained as many bills as arquebuses. They were afterward carried by sheriff's officers attending execution, and finally by watchmen. Dr. Johnson states that as late as 1778 they were used by the watchmen of Litchfield.

"But France had no infantry that dared to face the English bows and bills."—*Macaulay: Hist. Eng.*, ch. i.

Edward II. (O. Pl.), ii. 366.

It is used by woodmen for the purpose of lopping trees; plumbers and basket-makers also employ it in their respective vocations. When short it is called a *hand-bill*, and when long a *hedge-bill*. Both forms are sometimes termed *wood-bills* or *forest-bills*.

"Standing troops are servants armed, who use thalence and sword, as other servants do the sickle or the *bill*, at the command of those who entertain them."—*Temple*.

"The comfortable sentences are bills of exchange, upon the credit of which we lay our cares down, and receive provisions."—*Taylor*.

B. Technically:

I. *Law*: In various senses, which will be understood from the details which follow.

(1) *Bill, chancery practice*: A complaint in writing addressed to the chancellor, or judge sitting on the chancery side of the court, containing: the names of the parties of the suit, both complainant and defendant; a statement of the facts on which the complainant relies, and the allegations which he makes; with an averment that the acts complained of are contrary to equity, and a prayer for relief and proper process. Its office in a chancery suit, is the same as a declaration in an action at law or a libel in a court of admiralty.

(2) *Bill of Attainder*: A bill declaring that the person named in it is attainted and his property confiscated. The constitution of the United States declares that no state shall pass any bill of attainder.

(3) *Bill of Conformity*. [CONFORMITY.]

(4) *Bill of Exceptions*: A bill of the nature of an appeal from a judge who is held to have misstated the law, whether by ignorance, by inadvertence, or by design. This the judge is bound to seal if he be requested by the counsel on either side so to do. The exceptions noted are reviewed by the court to which appeal is taken, and if the objections made to the rulings of the trial judge are well founded, the finding in the case is reversed, and usually the cause is remanded for a new trial.

(5) *Bill of Indictment*: A written accusation made against one or more persons of having committed a specified crime or misdemeanor. It is preferred to and presented on oath by a grand jury. If the grand jury find the allegations unproved, they ignore the bill, giving as their verdict, "Not a true bill;" if, on the contrary, they consider the indictment proved, their verdict is a "True bill." (*Blackstone: Comment.*, bk. iv., ch. 23.)

(6) *Bill of Particulars*: A paper stating in detail a plaintiff's case, or the set-off on defendant's side.

(7) *Bill of Costs*: A statement of the items which form the total amount of the costs of a suit or action. This is demandable as a matter of right before the payment of the costs.

(8) *Bill of Rights*. [II. Hist.]

II. *Eng. History and Law. Bill of Rights*: A bill which gave legal validity to the "claim of rights," i. e., the declaration presented by the Lords and Commons to the Prince and Princess of Orange on the 13th February, 1688, and afterward enacted in Parliament when they became king and queen. It declared it illegal, without the sanction of Parliament, to suspend or dispense with laws, to erect commission courts, to levy money for the use of the crown on pretense of prerogative, and to raise and maintain a standing army in the time of peace. It also declared that subjects have a right to petition the king, and, if Protestants, to carry arms for de-

fense; also that members of Parliament ought to be freely elected, and that their proceedings ought not to be impeached or questioned in any place out of Parliament. It further enacted that excessive bail ought not to be required, or excessive fines imposed, or unusual punishment inflicted; that juries should be chosen without partiality; that all grants and promises of fines or forfeitures before conviction are illegal; and that, for redress of grievances and preserving of the laws, Parliament ought to be held frequently. Finally, it provided for the settlement of the crown.

In the United States, a *bill of rights*, or, as it is more commonly termed in this country, a declaration of rights, is prefixed to the constitutions of most of the states.

III. *Parliamentary Procedure and Law*: An instrument drawn or presented by a member or committee to a legislative body for its approbation and enactment. After it has successfully passed both houses and received the constitutional sanction of the chief magistrate, where such approbation is requisite, it becomes a law.

IV. *Comm. and Law*: A writing in which one man is bound to another to pay a sum of money on a future day or presently on demand, according to the agreement of the parties at the time when it is drawn; and on which, in the event of failure, execution may be summarily done to enforce payment.

(1) *Bank bill*. [BANK-BILL.]

"... on the forging, altering, or uttering as true when forged, of any bank-bills or notes, or other securities."—*Blackstone: Comment.*, bk. iv., ch. 17.

(2) *Bill of Adventure*: A writing signed by a merchant, in which he states that certain goods shipped in his name really belong to another person, at whose risk the adventure is made.

(3) *Bill of Credit*:

(a) *Among merchants*: A letter sent by an agent or other person to a merchant, desiring him to give the bearer credit for goods or money. It is frequently given to one about to travel abroad, and empowers him to take up money from the foreign correspondents of the person from whom the bill or letter of credit was received.

(b) *Among governments*: A paper issued by a government on its credit, and designed to circulate as money.

"... of bills of credit issued from the Exchequer."—*Blackstone: Comment.*, bk. iv., ch. 17.

¶ By the amended constitution of the United States it is provided that no state shall issue bills of credit.

(4) *Bill of Entry*: A written account of goods entered at the custom-house, whether imported or designed for exportation.

(5) *Bill of Exchange*: A bill or security originally introduced for enabling a merchant in one country to remit money to a correspondent in the other. It is an open letter of request from one man to another desiring him to pay to a third party a specified sum and put it to the account of the first. If A in London owe \$500 to B in New York, and C be about to travel from New York to London, then C may pay the \$500 to B before departure, and carry a bill of exchange on A in London for the amount. If the last-named gentleman be honest, and if he be solvent, he will repay the money to C on reaching London, and C will have reaped an advantage in having the cash in the form of a bill, which it was safer for him to carry in this form on the passage than if he had had it in notes or gold. In such a transaction, B, the person who writes the bill of exchange, is called the *drawer*; A, to whom it is written, is termed up to the time that he accepts it, the *drawee*, and after he has done so the *acceptor*; and C, his order, or the bearer—in short, whoever is entitled to receive the money—the *payee*. The bill may be assigned to another by simple endorsement; the person who thus transfers it is named the *endorser*, and the one to whom it is assigned the *endorsee* or holder. Every one whose name is on the back of a bill is responsible if the person on whom payment should legitimately fall fail to meet his engagement. The first bills known in commerce were about A. D. 1328. Bills of exchange are also called *drafts*. Formerly it was deemed important to divide them into *foreign*, when they were drawn by a merchant residing abroad or his correspondent, and *inland*, when both the drawer and the drawee resided in the same country. Now, the distinction is little attended to, there being no legal difference between the two classes of bills.

(6) *Bill of Lading*: A document by which the master of a ship acknowledges to have received on board his vessel, in good order and condition, certain specified goods consigned to him by some particular shipper, and binds himself to deliver them in similarly good order and condition—unless the dangers of the sea, fire, or enemies prevent him—to the assignees of the shipper at the point of destination, on their paying him the stipulated freight. Usually two or three copies of a bill of lading are made, worded thus: "One of which bills being accom-

plished, the other stands void." A bill of lading may be transferred by endorsement like a bill of exchange.

(7) *Bill of Parcels*: An account given by a seller to a buyer, giving a list of the several articles which he has purchased and their prices.

(8) *Bill of Sale*: A deed or writing, under seal, designed to furnish evidence of the sale of personal property. It is necessary to have such an instrument when the sale of property is not to be immediately followed by its transference to the purchaser. It is used in the transfer of property in ships, in that of stock in trade, or the good-will of a business. It is employed also in the sale of furniture, the removal of which from the house would call attention to the embarrassed circumstances of its owner; hence the statistics of the bills of sale act as an index to measure the amount of secret distress existing in times of commercial depression. In not a few cases bills of sale are used to defeat just claims against the nominal or real vendor of the goods transferred.

(9) *Bill of Sight*: A form of entry at the custom-house by which one can land for inspection, in presence of the officers, such goods as he has not had the opportunity of previously examining, and which, consequently, he cannot accurately describe.

(10) *Bill of Store*: A license granted at the custom-house to merchants to carry such stores as are necessary for a voyage, without paying customs duty upon them. (*Wharton*.)

V. *Statistics. Bill of Mortality*: A statistical report of the number of deaths within a certain locality in a year or other specified period of time. To make the figures as useful as possible for scientific purposes, the causes of death are now specified.

VI. *Nautical. Bill of Health*: A certificate given to the master of a ship clearing out of a port in which contagious disease is epidemic, or is suspected to be so, certifying to the state of health of the crew and passengers on board.
